

Climate Change

Goodbye ERA-Interim, hello ERA5

“The strength of ensembles”

Hans Hersbach,

Bill Bell, Paul Berrisford, Gionata Biavati, Dick Dee, Rossana Dragani, Anabelle Guillore, Andras Horanyi, Julien Nicolas, Carole Peubey, Raluca Radu, Iryna Rozum, Patricia de Rosnay, Joaquin Munoz Sabater, Dinand Schepers, Adrian Simmons, Cornel Soci and Freja Vamborg.

Climate
Change

2019 theme: “The strength of ensembles”

*Twenty-five years ago ECMWF was one of the first forecasting centres to start issuing **operational ensemble forecasts**. The implementation of these ensembles induced a paradigm shift in numerical weather prediction (NWP).*

*Today, exactly **75 years ago**, the method of ensembles was used for the weather forecast for D-Day.*

Climate
Change

The 3-member “ensemble forecast system” for D-Day in June 1944

Forecasts for conditions on **5 June** made on the evening of 3 June and confirmed early in the morning of 4 June

- on which the forecasting teams initially split **two-to-one** in favour of conditions that led to **postponement**

Forecasts for conditions on **6 June** made on the evening of 4 June and confirmed early in the morning of 5 June

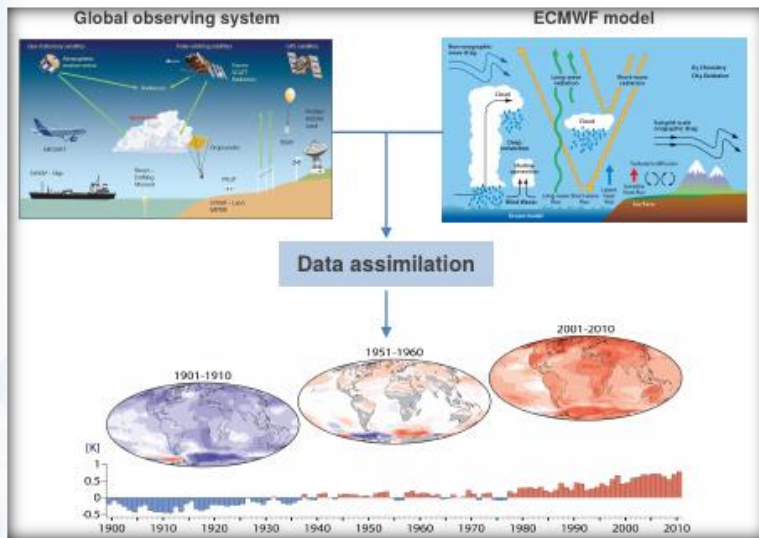

- on which the forecasting teams initially split **two-to-one** in favour of conditions that led to a decision to **proceed**

Climate
Change

The need for ensembles in reanalysis

Reanalysis is very popular (e.g., ERA-Interim had over 40,000 users from 2015 alone)

- **Complete:** combining vast amounts of observations into (global) fields
- **Consistent:** use the same physical model and DA system throughout
- **Convenient:** “maps without gaps”, always available in the same way

Observations and ERA-PreSAT reanalysis for June 4 1944

Mean-sea-level pressure analysis for 1200 UTC 4 June 1944
Observations from 0901 UTC 4 June 1944 to 0900 UTC 5 June 1944

- **However:** The observing system has evolved considerably and so the quality of the reanalysis products that rely on this!

➤ **ERA5** is based on a 10-member Ensemble 4D-Var data assimilation system

Climate

2018 ERA5:

Current observing system

Climate
Change

ERA5 forcing appropriate for climate

CMIP5 recommended data sets

Total solar irradiance, greenhouse gases, ozone, aerosols (including volcanic)

(Prepared in the ERA-CLIM project, *ERA-20CM*,
Hersbach et. al., 2015)

ERA5 Sea Surface Temperature (Celsius), GLOBE (daily, monthly, yearly, moving average)

SST and sea ice cover

Carefully selected from OSTIA, OSI-SAF and HadISST2 (Hadley Centre, *ERA-CLIM*)

Different ensemble members use different SST realizations

ERA5 Sea Ice Cover (percent), 60N-90N (daily, monthly, yearly, moving average)

(*Hirahara et. al., 2016*)

Climate
Change

Status of ERA5

Full-observing-system global reanalysis for atmosphere, land and ocean waves.

ERA5 is replacing ERA-Interim: end date ERA-I **31 August 2019**

To date ERA5 is publicly available from **Jan 1979 - March 2019**
(**40 years + 3 months**)

Improvements compared to ERA-Interim:

- Benefit from 10 years model development
- Much higher resolution; **31km** versus 79km
- More and better input data
- **Hourly output**
- **Uncertainty estimate** (at 63km)

T2m, June 2018 - May 2019
relative to 1981-2010

CDS Public Release plan for 2019/2020:

- **Currently:** updates 2-months behind real time
- **Soon:** ERA5-Land from 2001 (9km)
- **soon:** updates 2-5 days behind real time: **ERA5T**
- **Next:** access to ERA5 observations
- **Early 2020:** **1950-1978.**

Climate
Change

The ERA5 observing system

0.75 (1979) – 24 Million (2019) obs per day
Over 200 types of reports

Reprocessed data sets

Radiances: SSM/I brightness temp from CM-SAF
MSG from EUMETSAT

Atmospheric motion vector winds: METEOSAT, GMS/GOES-9/MTSAT,
GOES-8 to 15, AVHRR METOP and NOAA

Scatterometers: ASCAT-A (EUMETSAT),
ERS 1/2 soil moisture (ESA)

Radio Occultation: COSMIC, CHAMP, GRACE, SAC-C, TERRASAR-x (UCAR)

Ozone: NIMBUS-7, EP TOMS, ERS-2 GOME, ENVISAT SCIAMACHY, Aura
MLS, OMI, MIPAS, SBUV

Wave Height: ERS-1, ERS-2, Envisat, Jason

Latest instruments

IASI, ASCAT, ATMS, CrIS, MWHS, Himawari, ...

Improved data usage

all-sky vs clear-sky assimilation,
latest radiative transfer function, corrections,
extended variational bias control

Climate
Change

Skill from re-forecasts as a measure for the accuracy of reanalysis products

Range (days) when 365-day mean 500hPa height AC (%) falls below threshold

— ERA-Interim

— ERA5

Re-forecasts from ERA5 have higher
skill than those from ERA-Interim

The (forecast) model is an integral part
of the assimilation system

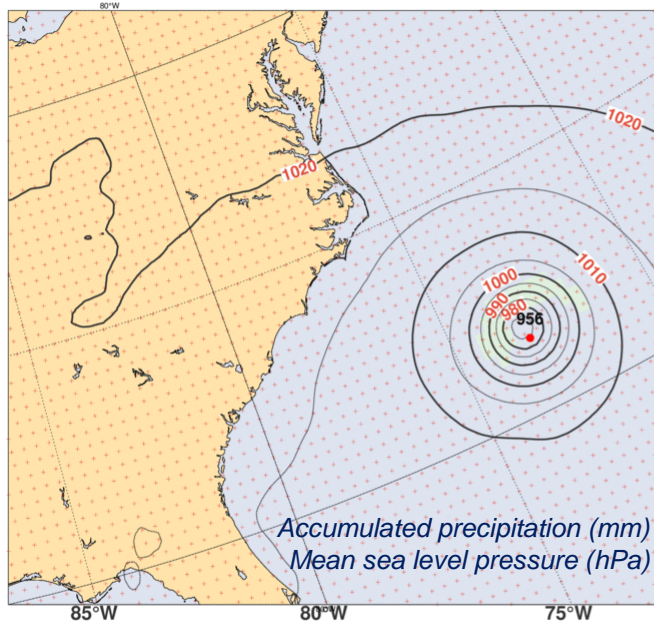

Also: better analyses produce better
forecasts

Climate
Change

Better model, more and better observations, higher resolution, hourly output

ERA5 in the Climate Data Store

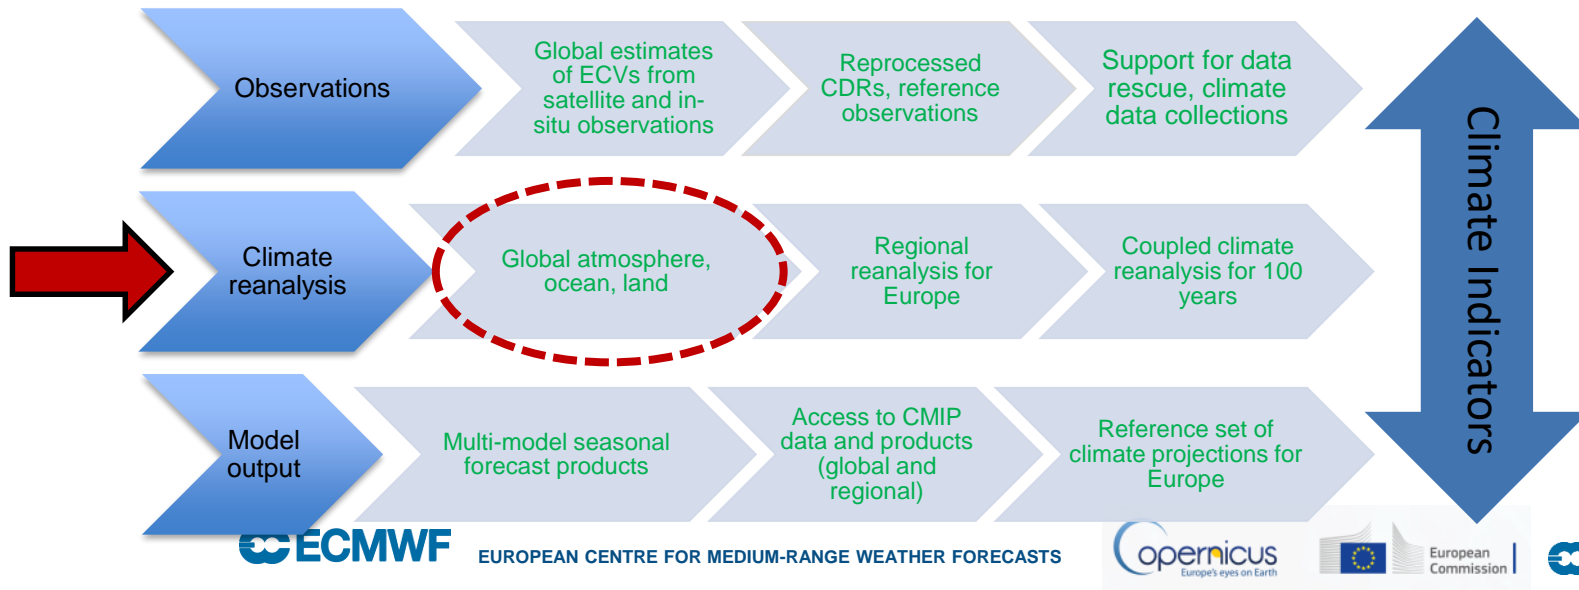

Climate
Change

The Climate Data Store

One of the pillars of C3S

- One-stop shop for climate data
- Free access
- User support
- Includes CDS Tool Box
- Quality assurance (in steps)

How to access ERA5 data?

Online data sets: [Copernicus Climate Data Store](#) | [Copernicus Climate Data Store](#)

- Regridded to regular lat-lon (0.25 degrees)
- Pressure levels and single levels
- Hourly and monthly averages
- Simplified structure (best estimate)

Data on tape: ERA5 complete: via CDS_API

Copernicus knowledge base:

- CKB portal: [Copernicus Knowledge Base - Copernicus Knowledge Base - ECMWF Confluence Wiki](#)
- How to download data: [How to download ERA5 - Copernicus Knowledge Base - ECMWF Confluence Wiki](#)
- ERA5 online documentation: [ERA5 data documentation - Copernicus Knowledge Base - ECMWF Confluence Wiki](#)
- C3S forum: [forum - Copernicus User Support Forum - ECMWF Confluence Wiki](#)

ERA5 reference:

- Peer-reviewed: in preparation (2019)

Copernicus user support: copernicus-support@ecmwf.int

Final remarks and outlook

ERA5 is available from 1979 and is replacing ERA-Interim.

- Much higher resolution, better model, better and more observations
- The ensemble provides information on the evolving confidence of its products

Reanalysis provides a physically complete view of the recent climate.

- Reanalysis is now fully integrated into international assessments of climate change as delivered by, for example, the WMO, and the European State of the Climate.

The ongoing production of ERA5 is undertaken within the Copernicus C3S framework.

- At ECMWF as part of the C3S operational service
- Many reanalysis-related tasks are being carried out by C3S outsourced providers:
 - satellite reprocessing (EUMETSAT), data rescue, consolidation of historical datasets
 - the production of two high-resolution regional reanalyses, for Europe and the Arctic

The ERA5 data product portfolio is growing:

- Next: ERA5-Land, timely updates 2 days behind real time, access to observation feedback, back extension to 1950
- Evolution of the CDS, increasing versatility of the toolbox, implementation of quality assurance stamps (EQC)

WMO climate statement: past 4 years warmest on record

Climate
Change

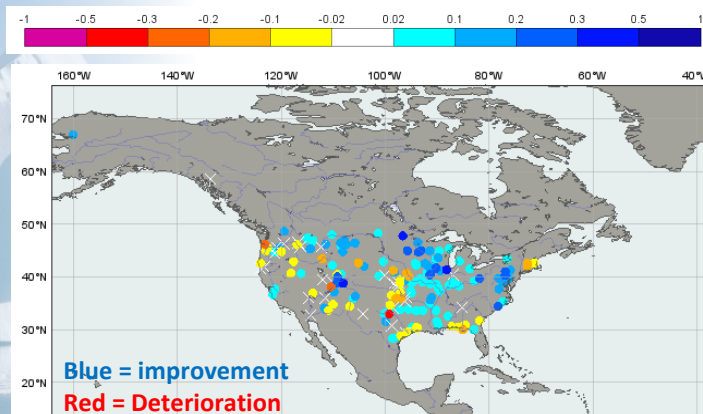

What is new in ERA5?

| | ERA-Interim | ERA5 |
|---|--|--|
| Period | 1979 – present | 1950 – present , produced in 2 phases |
| Availability behind real time | 2-3 months | 2-3 months (final product) 2-5 days (ERA5T) |
| Assimilation system | 2006 (31r2), 4D-Var | 2016 (41r2), 4D-Var, hybrid EDA providing B |
| Model input (radiation and surface) | As in operations, (<i>inconsistent SST and sea ice</i>) | Appropriate for climate , e.g., evolution greenhouse gases, volcanic eruptions, sea surface temperature and sea ice |
| Spatial resolution | 79 km globally 60 levels to 10 Pa | 31 km globally 137 levels to 1 Pa |
| Uncertainty estimate | | from 10-member EDA at 62 km |
| Output frequency | 6-hourly Analysis fields | Hourly (three-hourly for the ensemble), Extended list of parameters ~ 9 Peta Byte (1950 - timely updates) |
| Extra Observations | Mostly ERA-40, GTS | Various reprocessed CDRs, latest instruments |
| Variational Bias control radiosondes | Satellite radiances, RAOBCORE | Also ozone, aircraft, surface pressure, RISE |
| Land downscaling product | ERA-Interim land, 79km | ERA5L, 9km (forced by ERA5) |

Climate
Change

ERA5-Land, a high-resolution downscaling of the land-surface component

Discharge time series correlation difference ERA5-Land vs. ERA5

ERA5-Land is currently in production.

2001 onwards to become available via the C3S **Climate Data Store** soon

Joaquin Munoz-Sabater
