## Stratospheric waves over the Southern Andes

*Thursday, 21 November 2019 09:30 (30 minutes)*

Stratospheric mountain waves will be observed during the planned SOUTHTRAC campaign in southern Argentina in September/October 2019. First observational highlights from the airborne observations are presented. The selected results will be set in context with analyses of the ECMWF's IFS. Additionally, high-resolution numerical simulations will be presented for the selected cases.
