Contribution ID: 2

Type: **not specified**

Hydrostatic and non-hydrostatic dynamics, resolved and permitted convection

Monday, 9 March 2020 11:35 (1 hour)

During this presentation, we will discuss two of the questions faced by numerical weather prediction scientists as forecast models reach horizontal resolutions of 6 to 2 km:

- Do we need to abandon the primitive equations for a non-hydrostatic system of equations?
- Do we still need a deep convection parametrisation?
- and we will show what answers to these questions are given by very high resolution simulations of the IFS.

By the end of the presentation, you should be able to:

- discuss the limits of the hydrostatic approximation for numerical weather prediction
- explain the dilemma of parametrizing deep convection versus permitting explicit deep convection at resolution in the grey zone of convection

Presenter: POLICHTCHOUK, Inna
