Neural Networks for Postprocessing Ensemble Weather Forecasts

Wednesday, 7 October 2020 11:30 (30 minutes)

Ensemble weather predictions require statistical postprocessing of systematic errors to obtain reliable and accurate probabilistic forecasts. Traditionally, this is accomplished with distributional regression models in which the parameters of a predictive distribution are estimated from a training period. We propose a flexible alternative based on neural networks that can incorporate nonlinear relationships between arbitrary predictor variables and forecast distribution parameters that are automatically learned in a data-driven way rather than requiring prespecified link functions. In a case study of ECMWF 2-m temperature forecasts at surface stations in Germany, the neural network approach significantly outperforms benchmark postprocessing methods while being computationally more affordable. Key components to this improvement are the use of auxiliary predictor variables and station-specific information with the help of embeddings. Furthermore, the trained neural network can be used to gain insight into the importance of meteorological variables, thereby challenging the notion of neural networks as uninterpretable black boxes. Our approach can easily be extended to other statistical postprocessing and forecasting problems. We anticipate that recent advances in deep learning combined with the ever-increasing amounts of model and observation data will transform the postprocessing of numerical weather forecasts in the coming decade.

Thematic area

1. Machine Learning for Product development - Including NWP Post-processing, Non-linear Ensemble Averaging, Development of new NWP Products

Primary authors: Dr RASP, Stephan (TU Munich); LERCH, Sebastian (Karlsruher Institut für Technologie (KIT))

Presenter: LERCH, Sebastian (Karlsruher Institut für Technologie (KIT))

Session Classification: Session 4 (cont.) and Session 5: ML for Product Development and ML for Model Identification and development

Track Classification: ECMWF-ESA Workshop on Machine Learning for Earth System Observation and Prediction
