

# EUMETSAT Data Store Historic and Near Real Time Data access

**Cedric Bergeron**

**European Weather Cloud User Workshop, 10-11 Nov.2021**

European Weather Cloud User Workshop

Updates on the Eumetsat Data Store service which forms part of  
a wider portfolio of new online data access service from  
EUMETSAT

# Context

## EUMETSAT is reshaping its data services portfolio by:

- Leveraging big data and on-premises cloud computing technologies.
- Phasing in **new Data Services** to facilitate near real-time data access, data visualisation, data transformation and customisation and cloud processing adjacent to the archive.
- Introducing new web user interfaces (Web UIs) and application programming interfaces (APIs) to support for flexibility of use and incorporation into automated processing.
- Separate the Long term data preservation from the data services function and devise plan to phase out legacy services

# Those Online Data Services for European Weather Cloud

- Data transfer initiated by the user
- Based on **Internet** connectivity at user and EUMETSAT sites
- **APIs** (Application Programming Interfaces) are available to users to automate download via scripts or to embed them in user's application
- Integrated use is possible with other data services, like WMS, Product Customisation Tools and Hosted Processing, to limit the volume of data to be transferred to the user site – It implements paradigm of “**bringing user to the data**”

# Online Data Services: Eumetsat Data Store

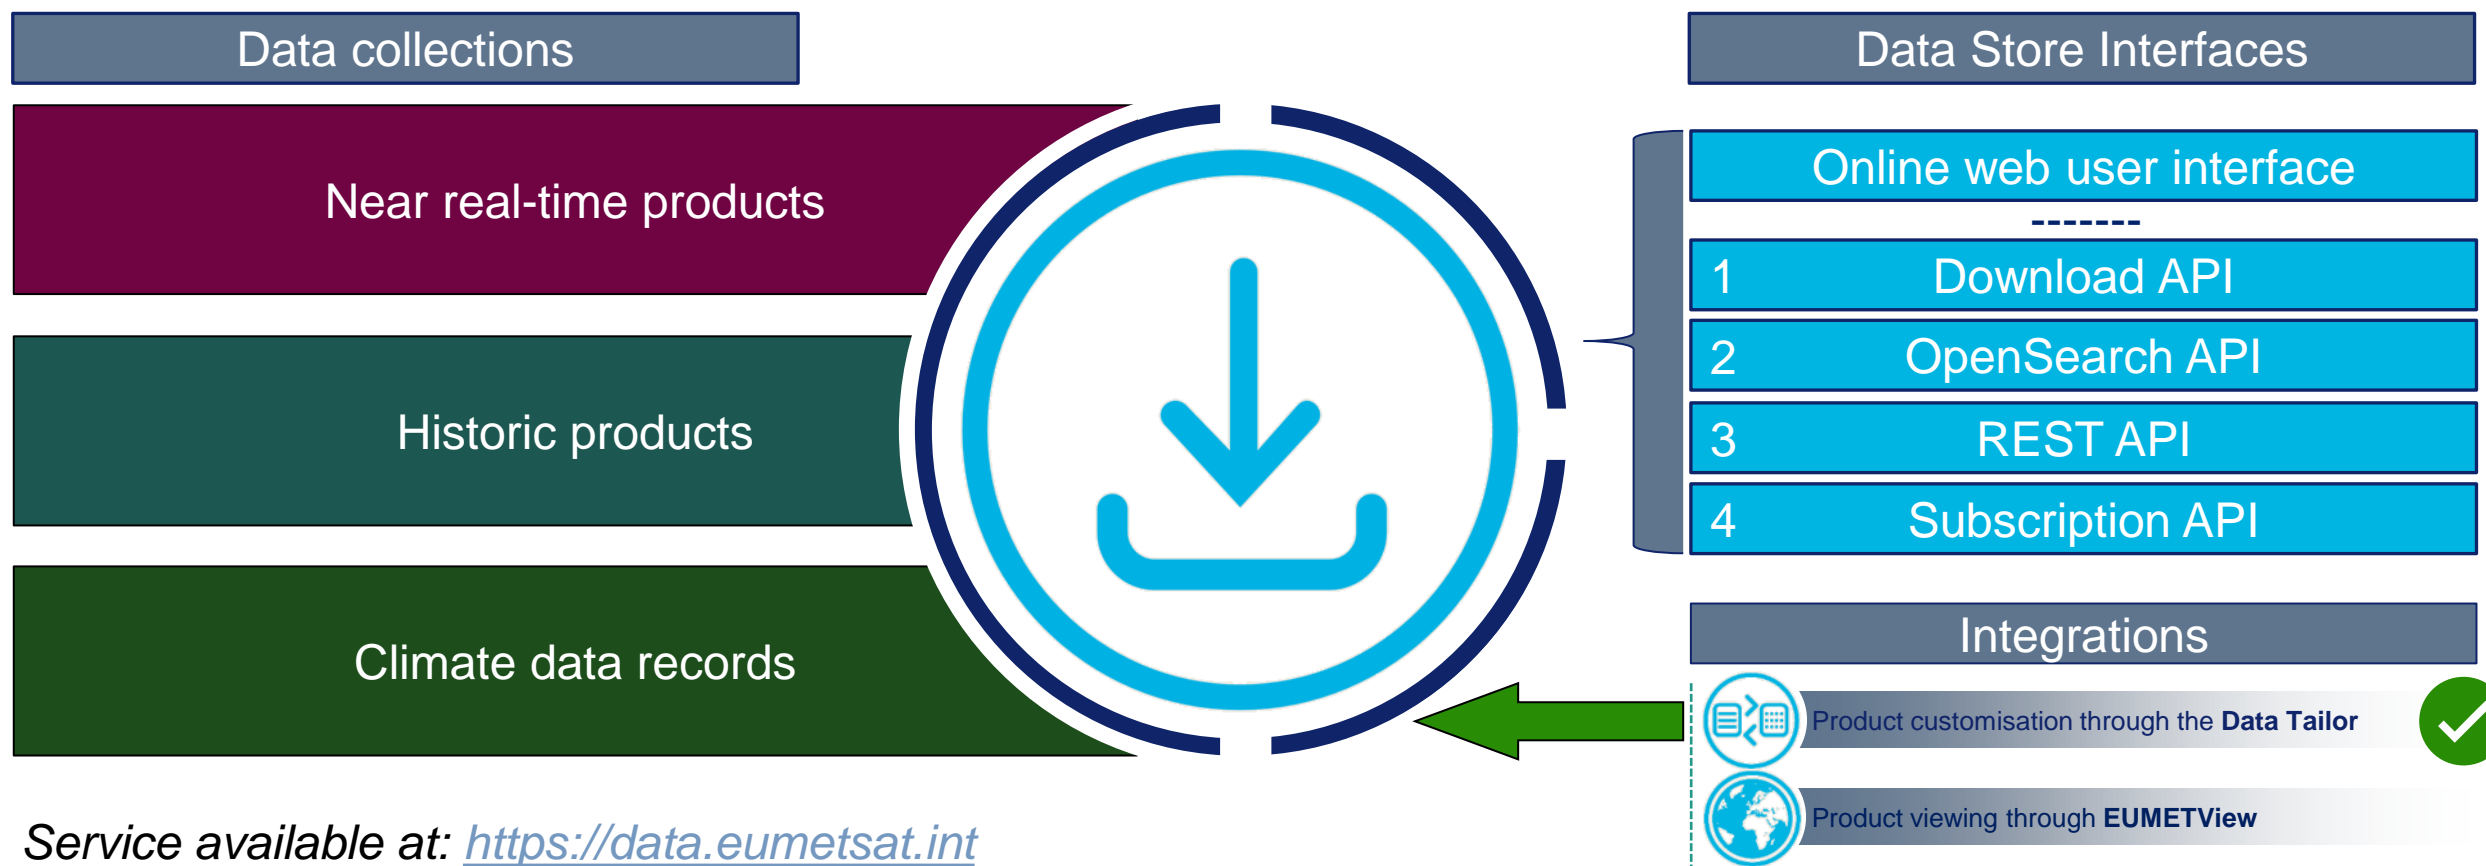

The **EUMETSAT Data Store** provides users with a download and linked data tailoring service for online data; providing access through an online web user interface and via a suite of APIs.

Service available at: <https://data.eumetsat.int>

# Online Data Services: Eumetsat Data Store

The **EUMETSAT Data Store** provides users with a download and linked data tailoring service for online data; providing access through an online web user interface and via a suite of APIs.

# Online Data Services: Eumetsat Data Store

- 1 Download API
- 2 OpenSearch API
- 3 REST API
- 4 Subscription API (coming soon)

Python and Jupyter notebook examples snippets available for each API

Swagger™

- 1 Download data using URL, command line and Python based options using ID or collection and sensing time
- 2 Search Data Store at product and collection levels. Filter selections by time, ROI, satellite, timeliness
- 3 Navigate/Browse products and collections by date and spatial coverage / footprint
- 4 Notification service for new product availability

# Online Data Services: Eumetsat Data Store

- What will come soon (2022):
  - Sentinel 3 products (migration from CODA and CODA REP)
  - Some SAF products (NRT, CDRs | under discussion)
  - Increased available online data pool (e.g. complete Archive history)...
  - Preparing for S6...
  - Preparing for MTG...
  - ...

**Continuous  
improvement**

# Online Data Services: Eumetsat Data Tailor

The **EUMETSAT Data Tailor** allows users to subset and aggregate our data products in space and time, filter layers, generate quicklooks, re-project, and reformat into common GIS formats (netCDF, GeoTIFF, etc.). It offers a uniform way to transform both historical and near real-time satellite data provided by EUMETSAT.

# Online Data Services: Data Store to Data Tailor

\*this works ONLY if the cart contains one TYPE of product

## 1. Add product to Cart

## 2. 'Customise' Cart

1. Find products; with Data Store  
OpenSearch API  
>> remote product URL

2. Call Data Tailor REST API with  
remote product URL from  
OpenSearch

# Online Data Services: Eumetsat Data Tailor

## Using the WebUI

Available as standalone and online versions (interface with the Data Store)

1 > Supports a wide array of products (Data Store and local)

2 > Customisable processing chains; full save and recall.

3 > Customisable output formats

4 > Process queuing and logging information.

The screenshot shows the EUMETSAT Data Tailor WebUI interface. The top navigation bar includes 'LAUNCHPAD', 'AGGREGATION', 'LAYER FILTER', 'REPROJECTION', 'ROI', 'QUICK LOOK', and 'OUTPUT OPTIONS'. The main content area is divided into several sections:

- Launchpad:** Contains 'Product type' (High Rate SEVIRI Level 1.5 Image Data - MSG), 'Output format' (GeoTiff), and 'Configuration' (Projection Plate-Carree with quick-look). A configuration window is open showing details like product, filter, format, name, projection, roi, quicklook, filter, bands, format, nodatavalue, resample\_method, and stretch\_method.
- Input products:** Lists 'MSG4-SEVI-MSG15-0100-NA-20201102112744.1290000002-NA.zip'.
- Status:** A table showing the progress of various customisations.
- Log:** A log of processing steps and their completion status.

Numbered annotations on the screenshot:

- 1: Product type dropdown.
- 2: Configuration window.
- 3: Output format dropdown.
- 4: Log window.

# Online Data Services: Eumetsat Data Tailor

- The standalone Data Tailor can also be run using a **command line interface (CLI)** or a Python **application programming interface (API)**;
  - Allowing for use without GUI
  - Supports more complex processing chains (e.g. with PyTroll)

## The Web REST API (remote)

- Provides a REST web interface that can be invoked from other applications

Python and Jupyter notebook examples snippets available for each API

Swagger™

# Eumetsat Data Store benefits examples

## For NRT users

- Download of products for a temporary time to cover local outages (file recovery service)
- ...

## For non-NRT users with temporary short term NRT needs

- Download of NRT products without implementation of a NRT reception system
- ...

## For Long Term Archive users

- Download data as provided (time series)
  - No need to wait for order completion
  - Historic and NRT data is kept online
  - Most popular data
- **Automation (scripting) by using i.e. REST APIs**
- ...

# What is new since the last User workshop?

- **The evolution is mainly based upon users and stakeholders feedback, for all services**
- **Operational since 26<sup>th</sup> of October 2021**  
Enhanced Service capabilities:
  - Implement full Monitoring and Control of Services (24/7)
  - Fully define SLA and implement KPI measuring and reporting
  - Increased performance

# THANK YOU
