Dana C. Strom

UEF 2022 – Visualising Meteorological Data

June 9, 2022

Uncertainty is a fundamental characteristic of weather prediction.

No forecast is complete without a description of its uncertainty.

National Research Council - 2006

Single-value deterministic forecast guidance

Cloud Host - AWS

Operating System - Centos 7

EC instance = c5.2xlarge (8 CPU, 32 GB of RAM)

Apache - http2 (enables multi-threading)

OpenLayers version = 4.6.5

Image Rendering - MapServer/MapCache

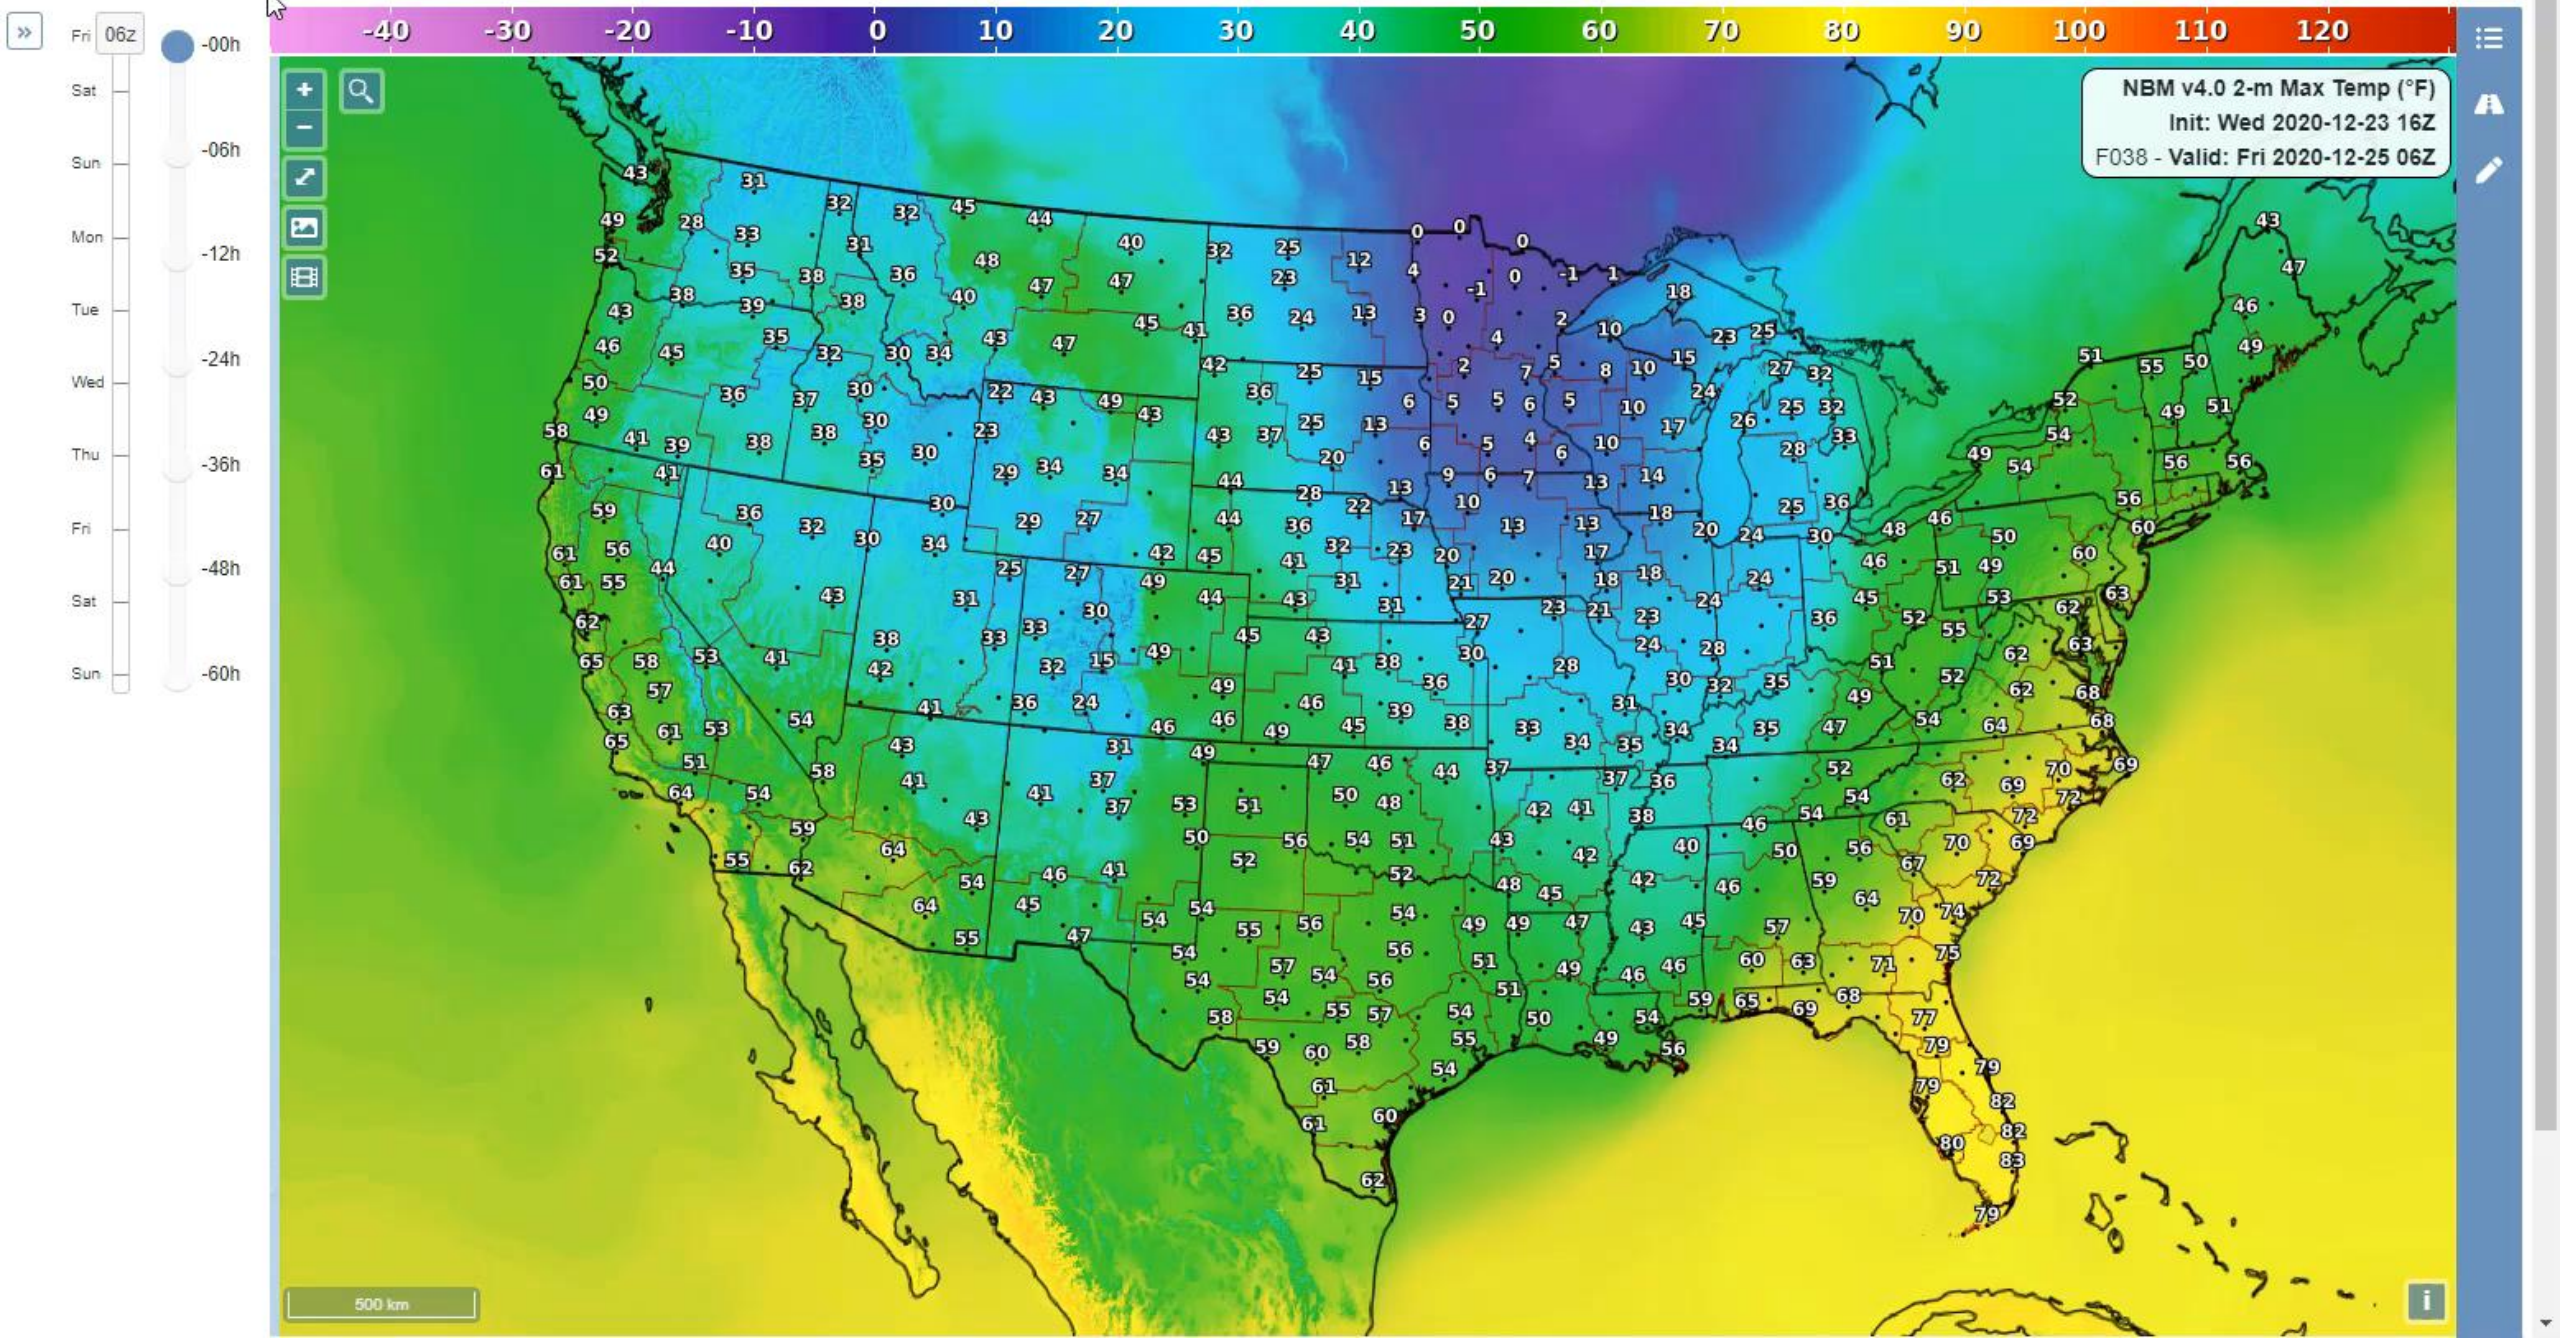

Number of MapServer threads = 4

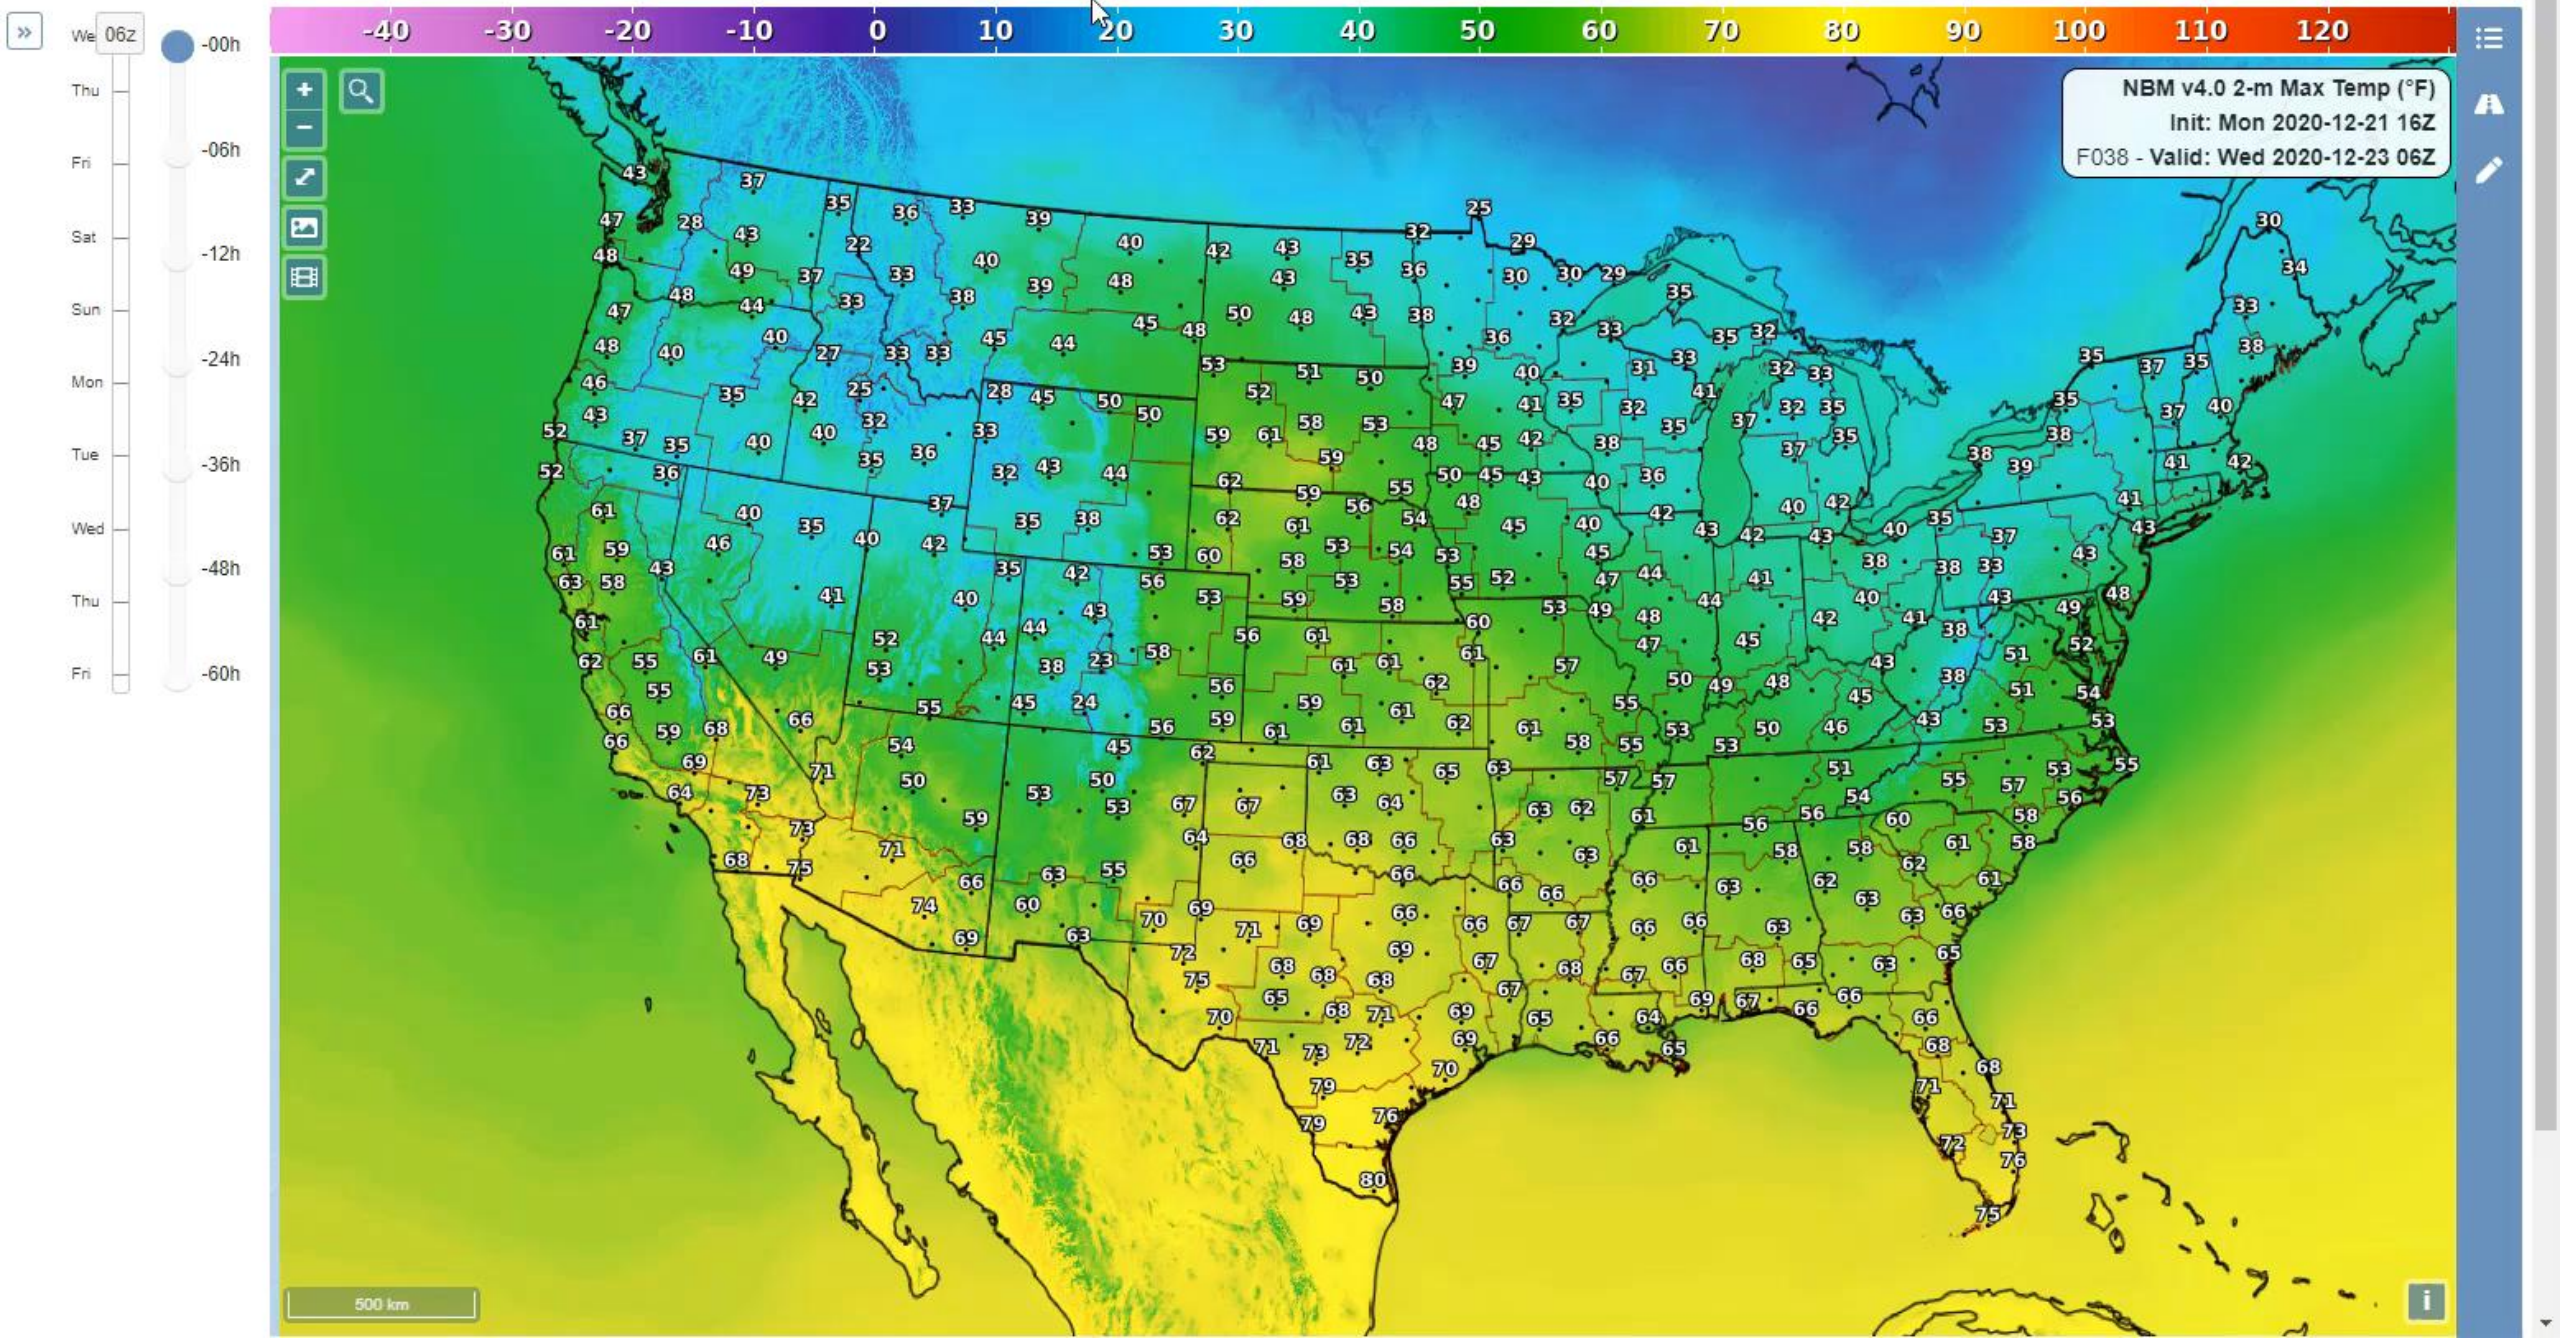

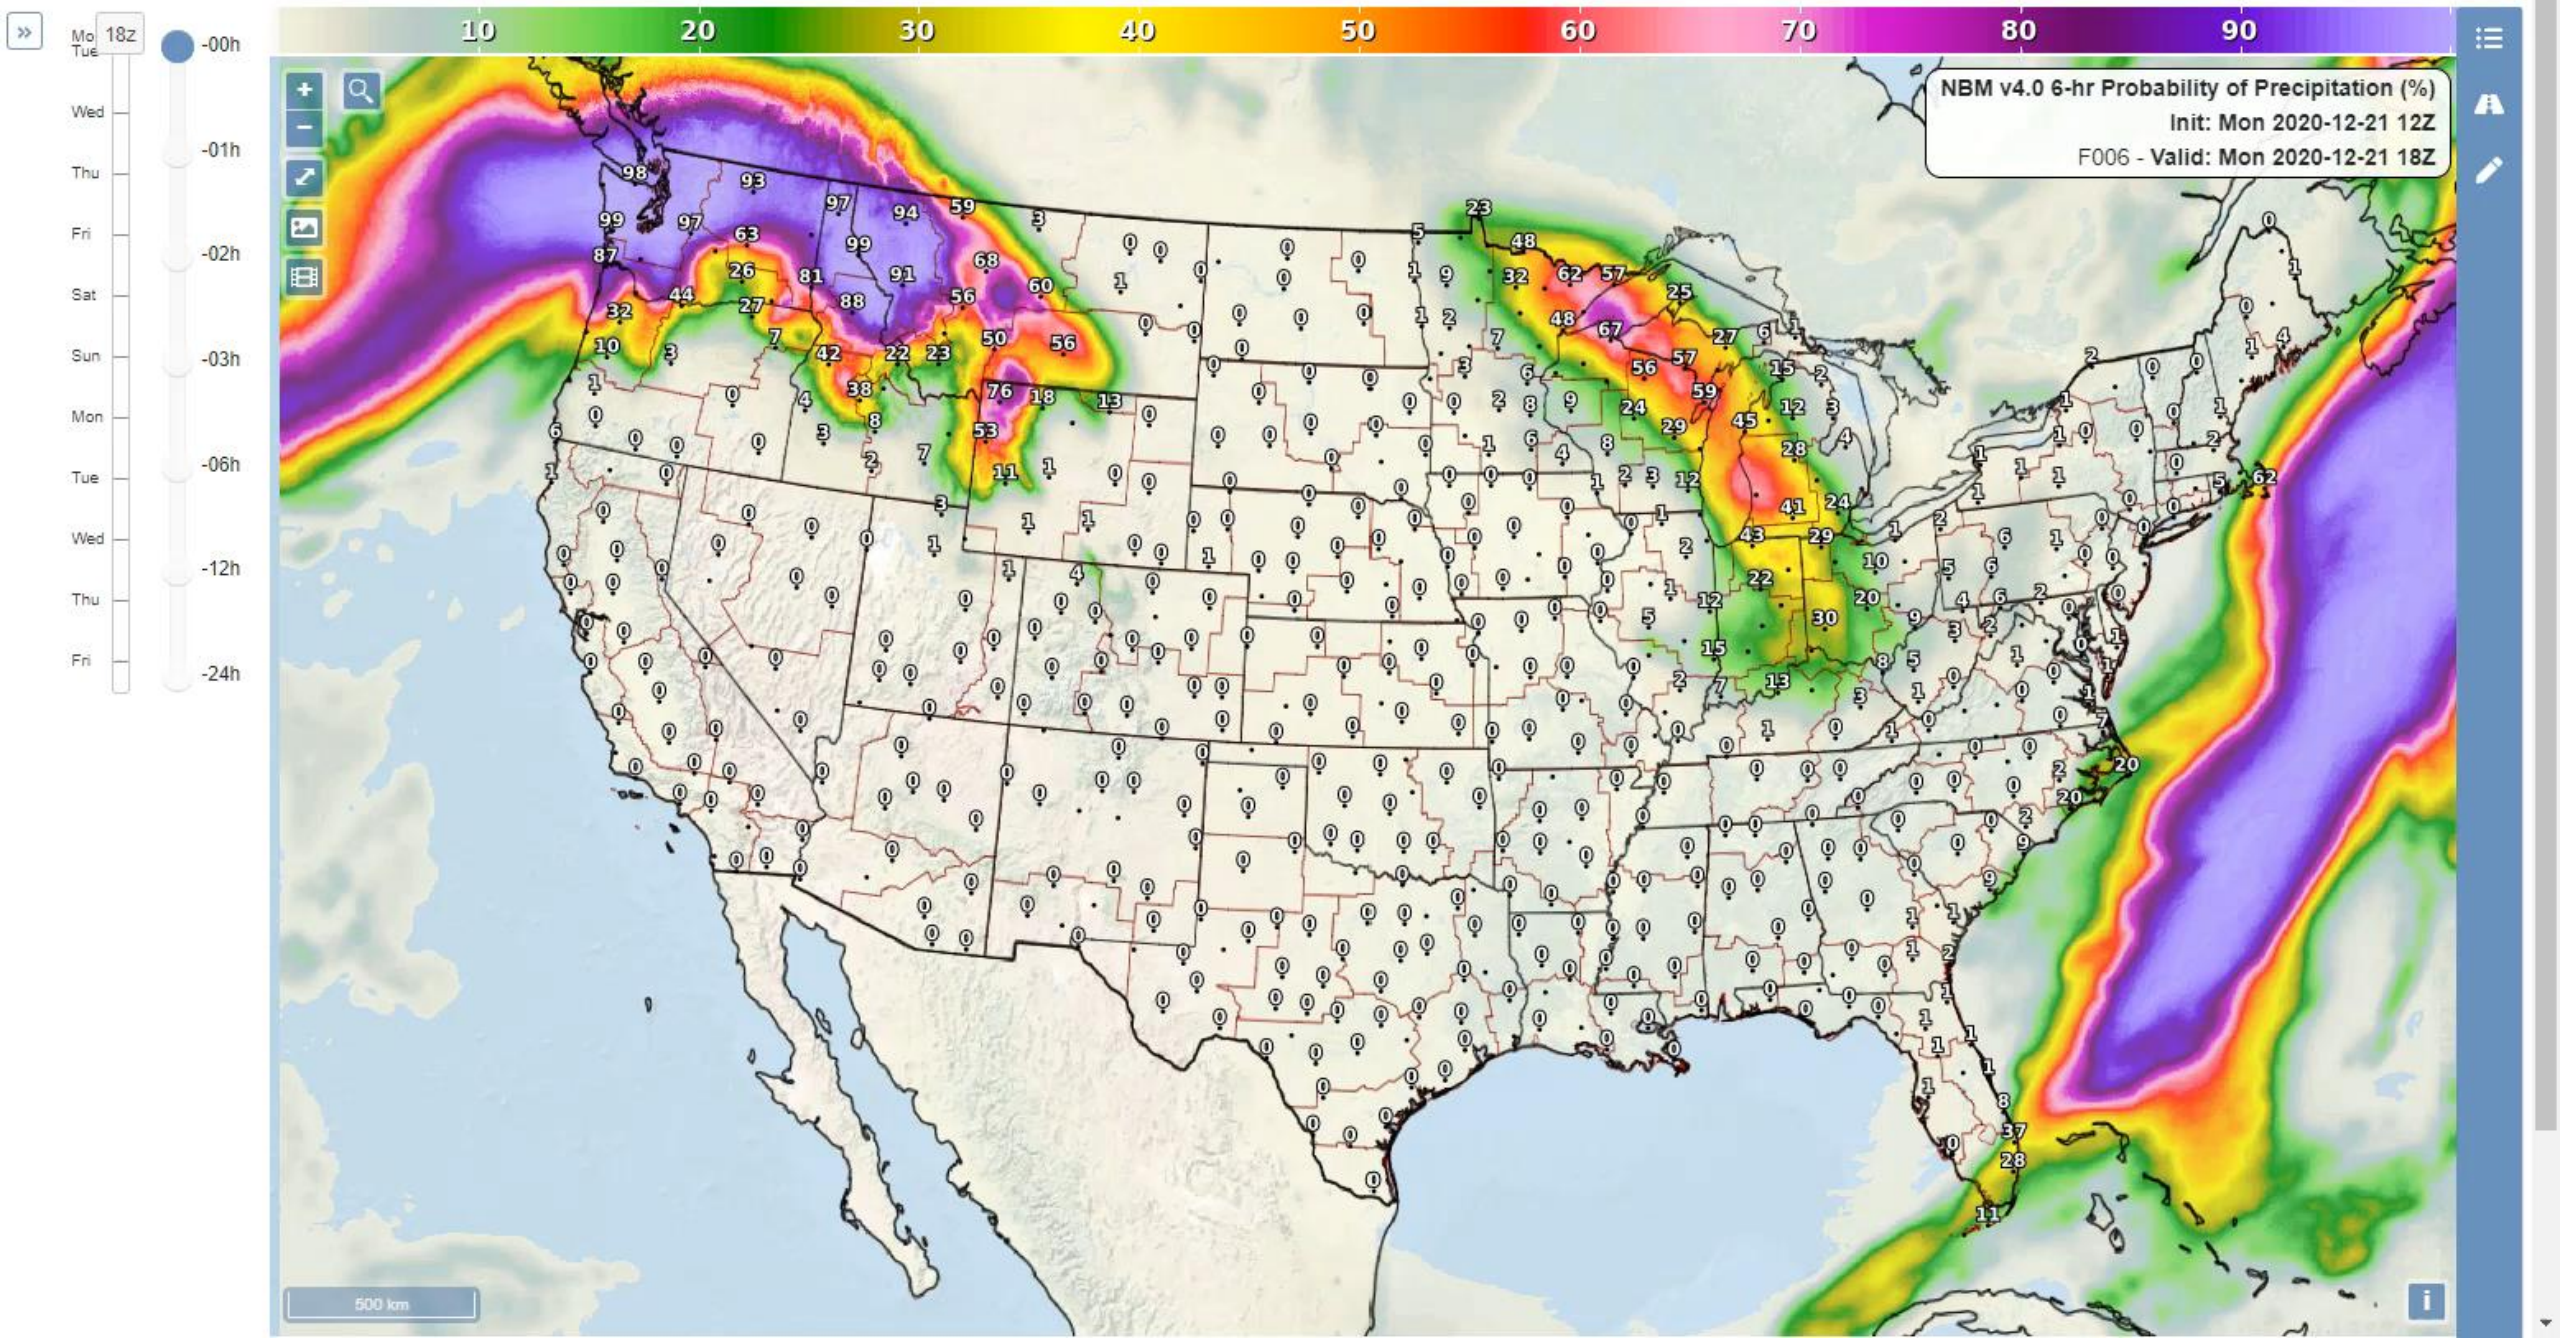

Data source = NCEP WCOSS

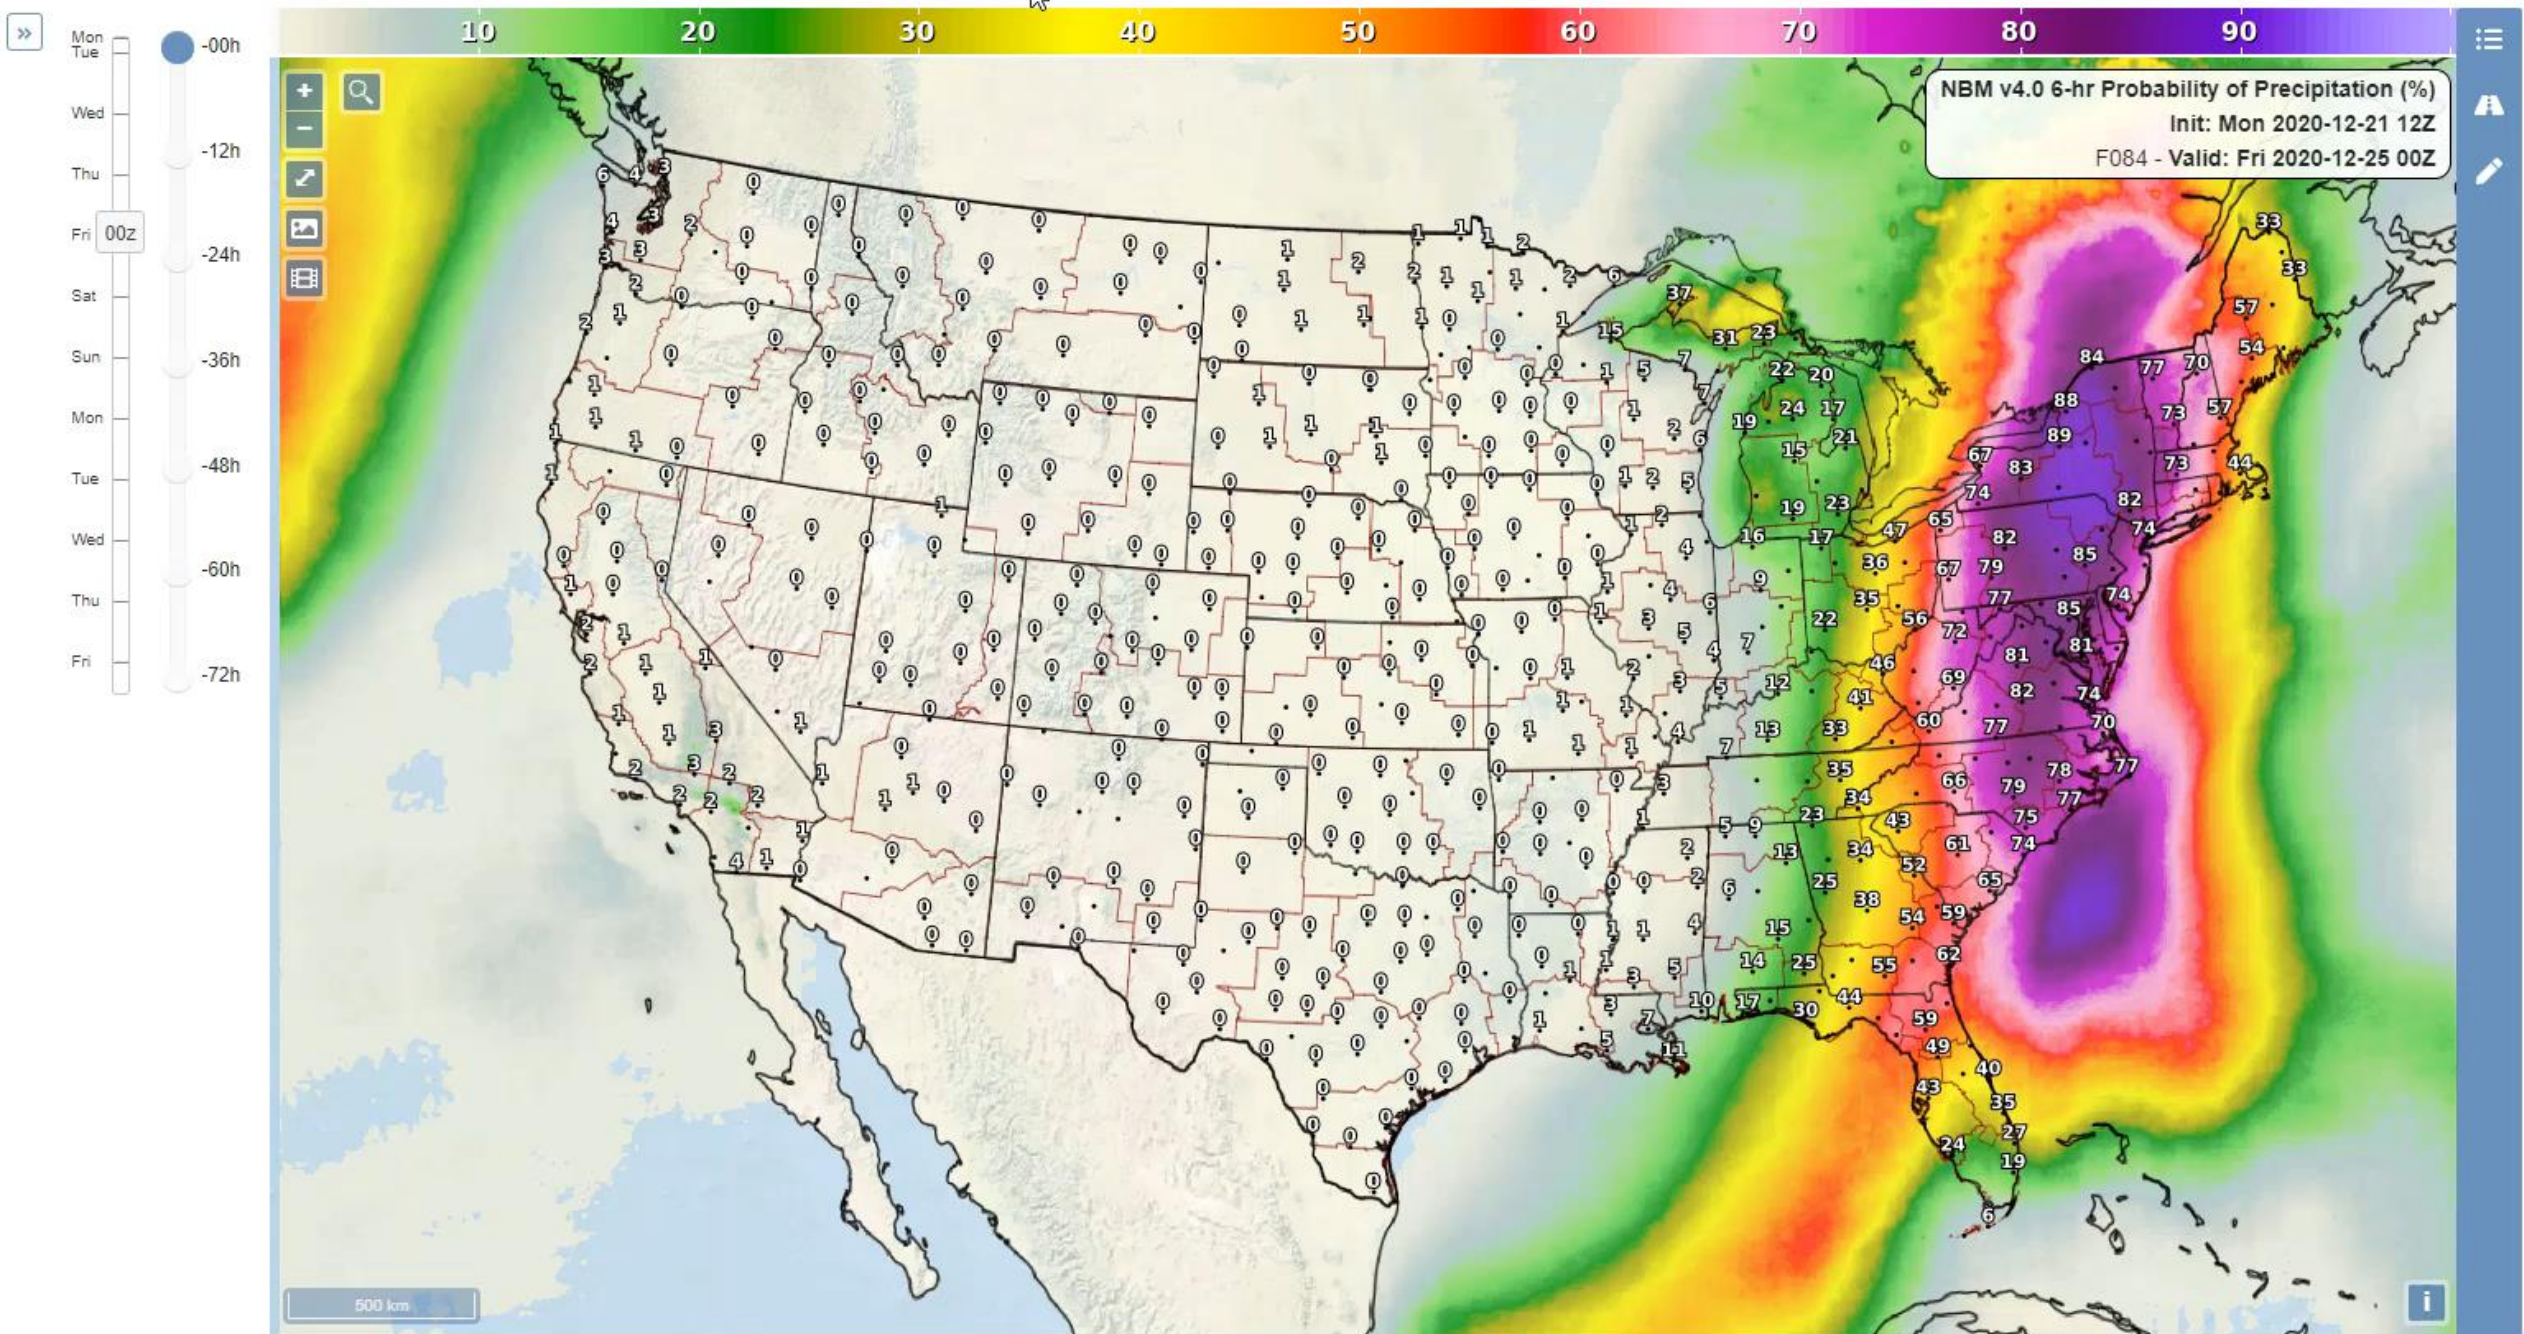

Grid data storage = Cloud-optimized GeoTiff in S3 buckets

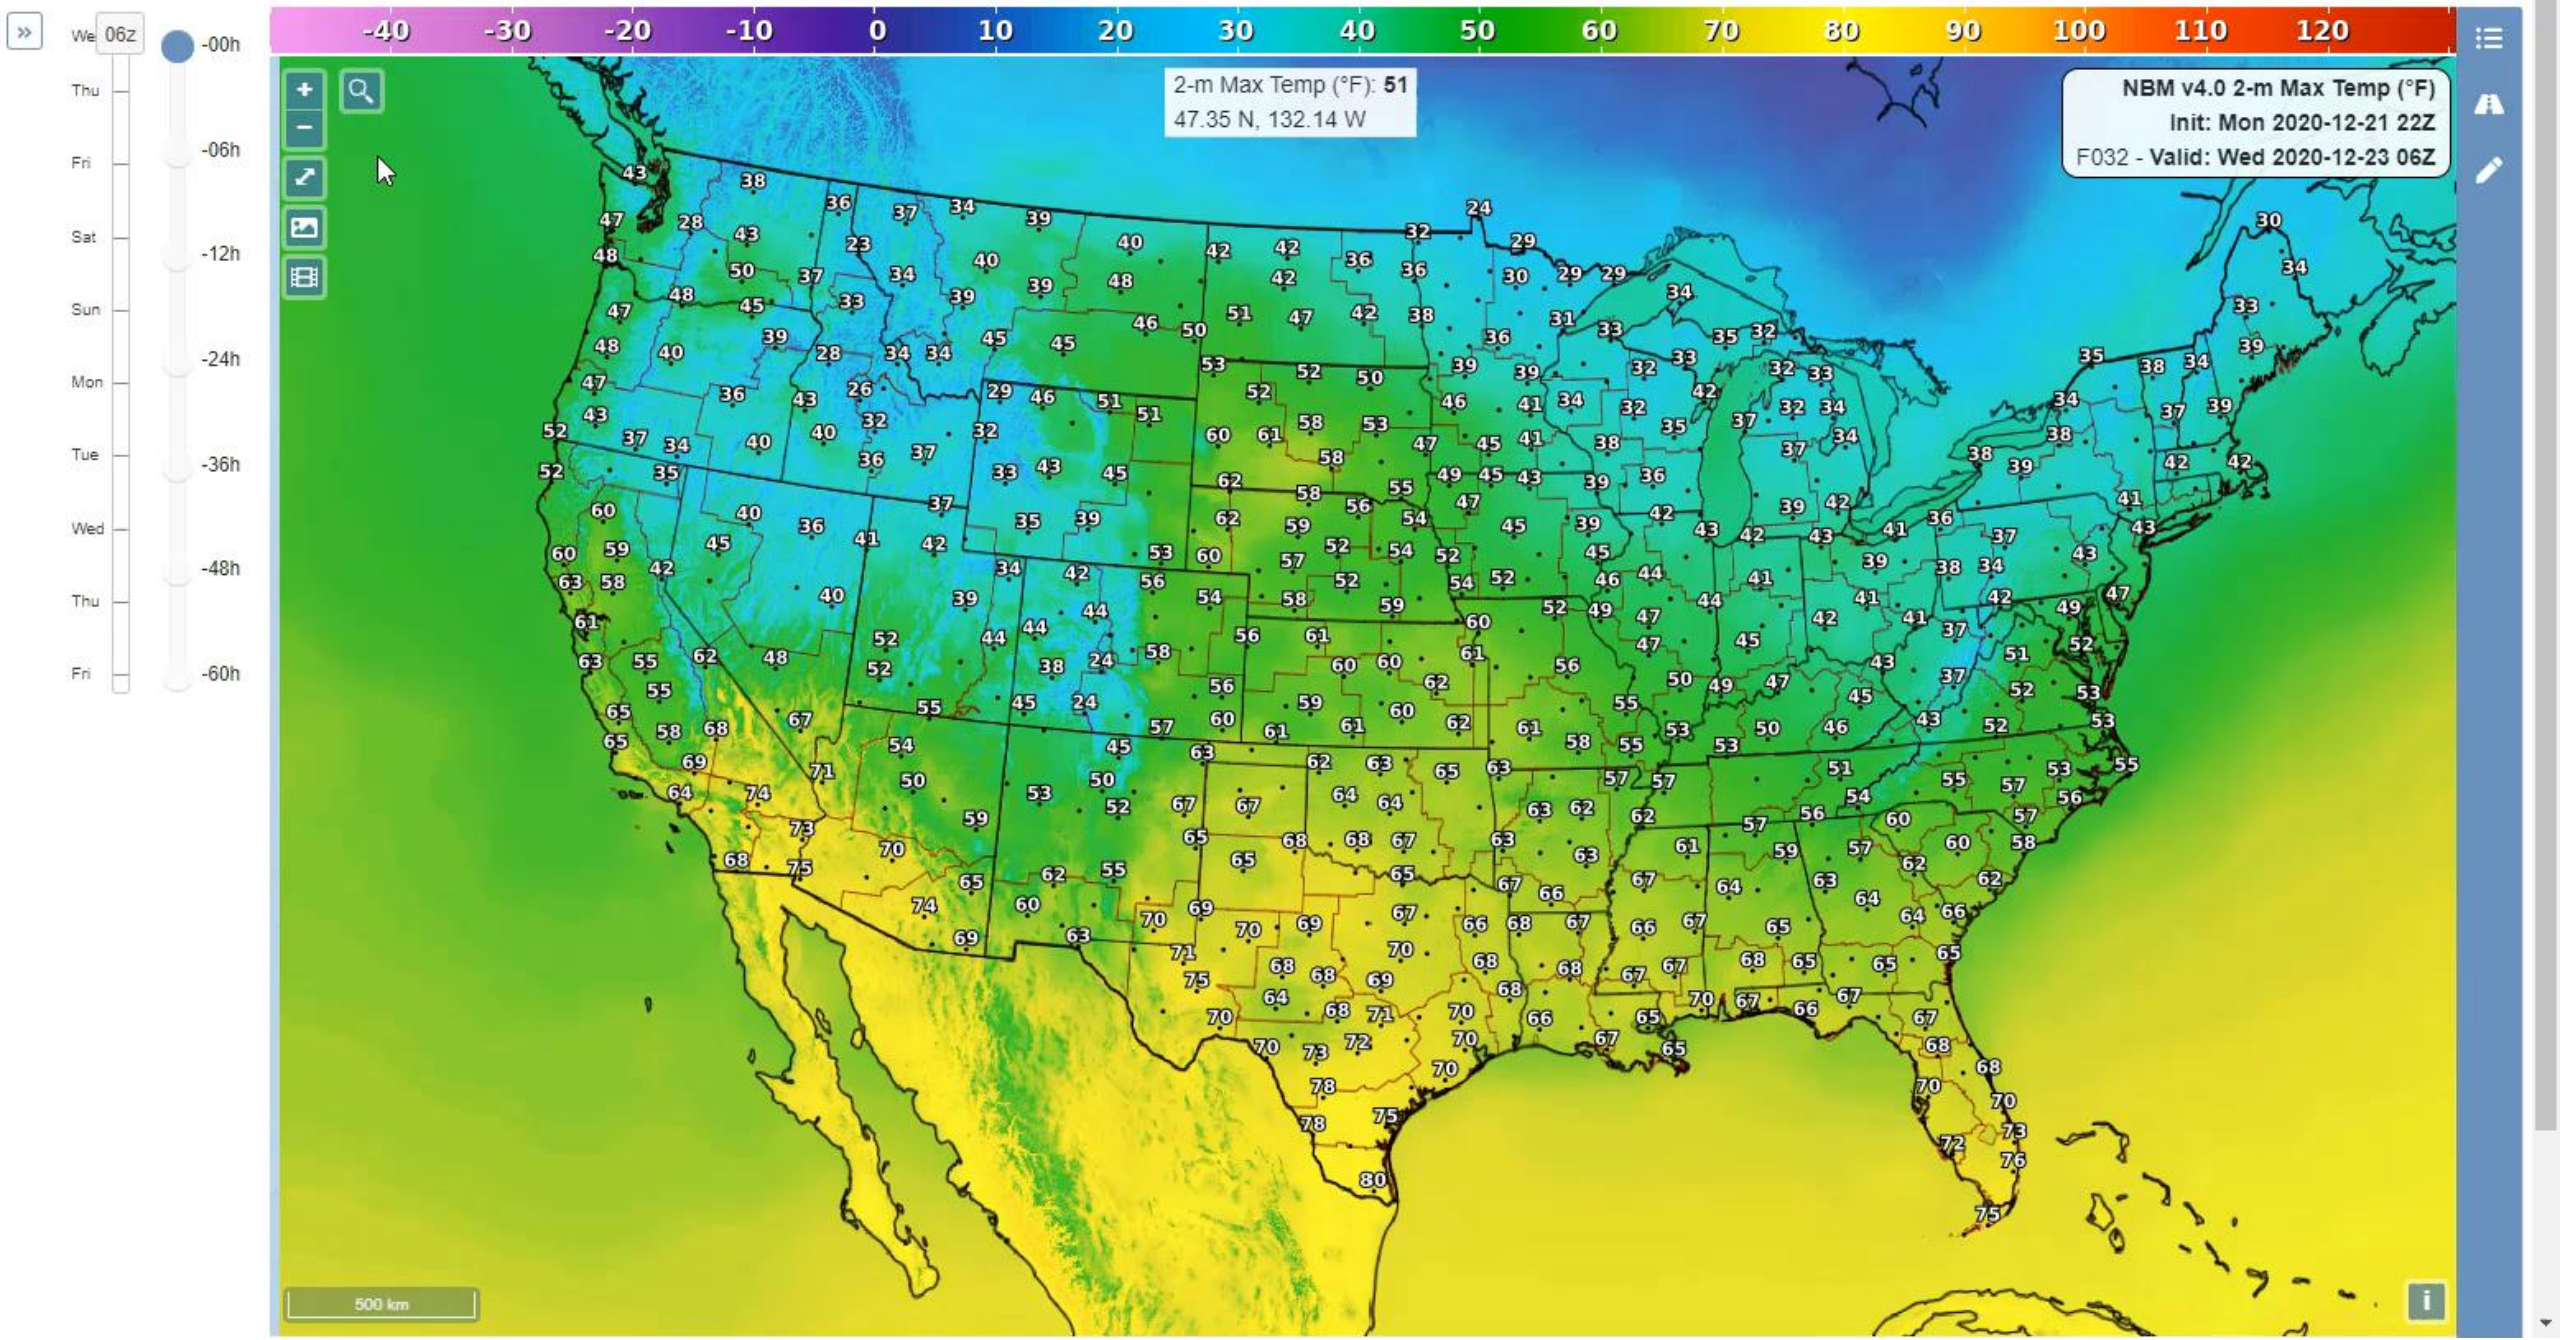

Point data storage = Postgresql and Xarray/Zarr with Lustre

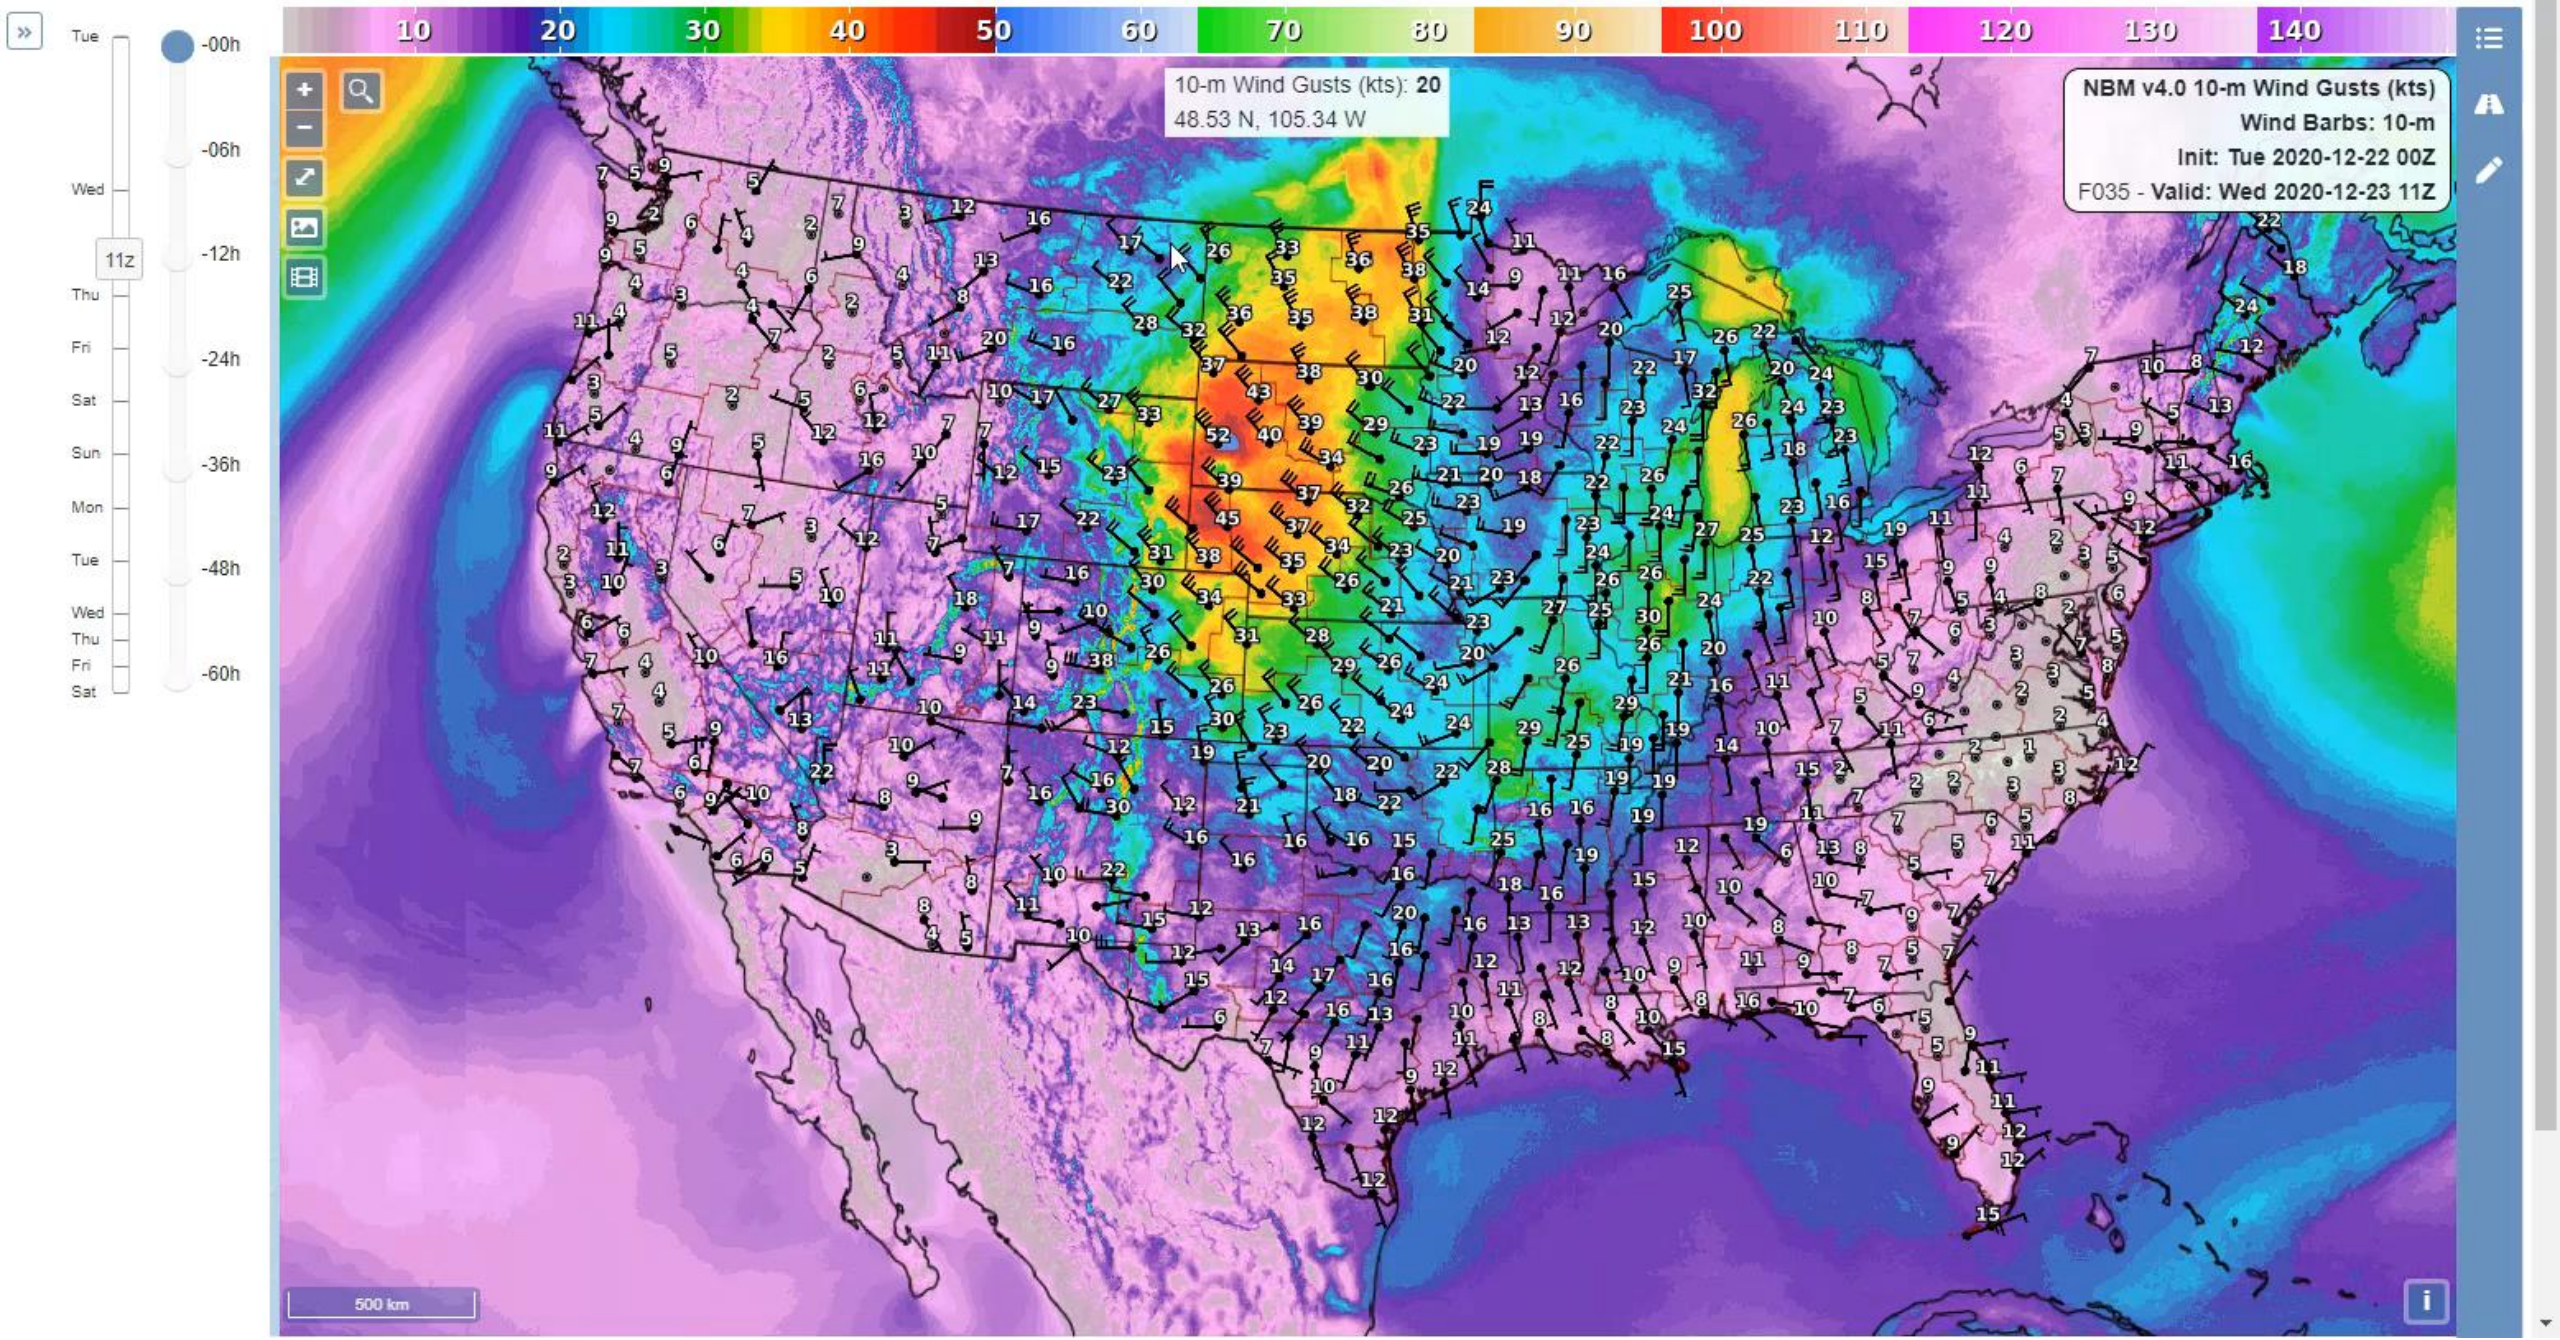

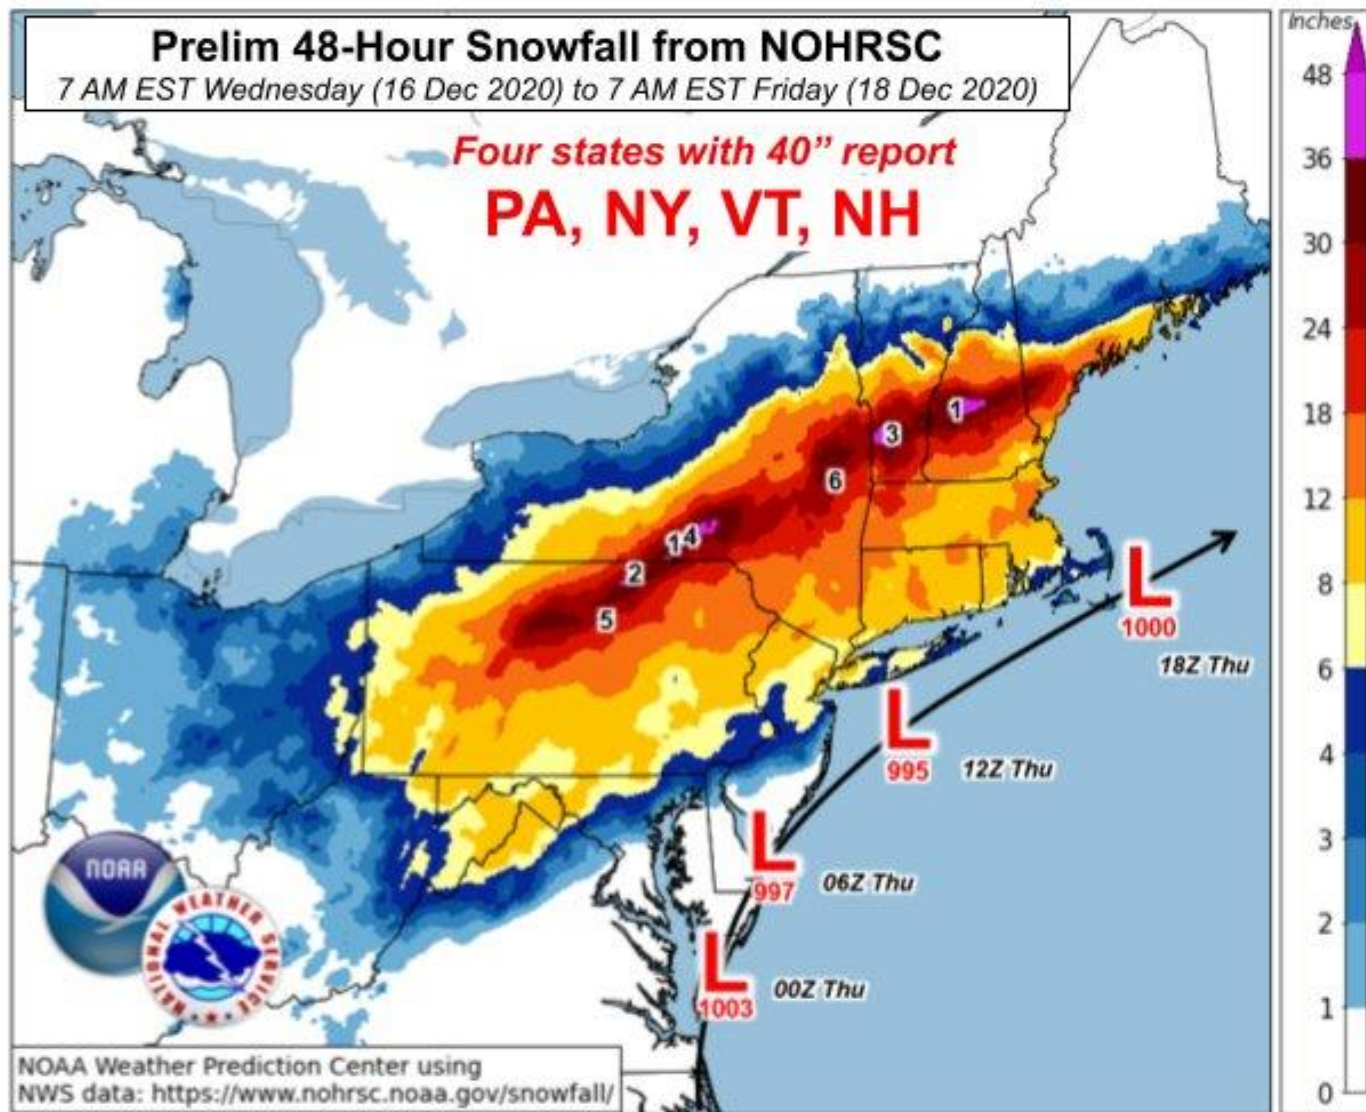

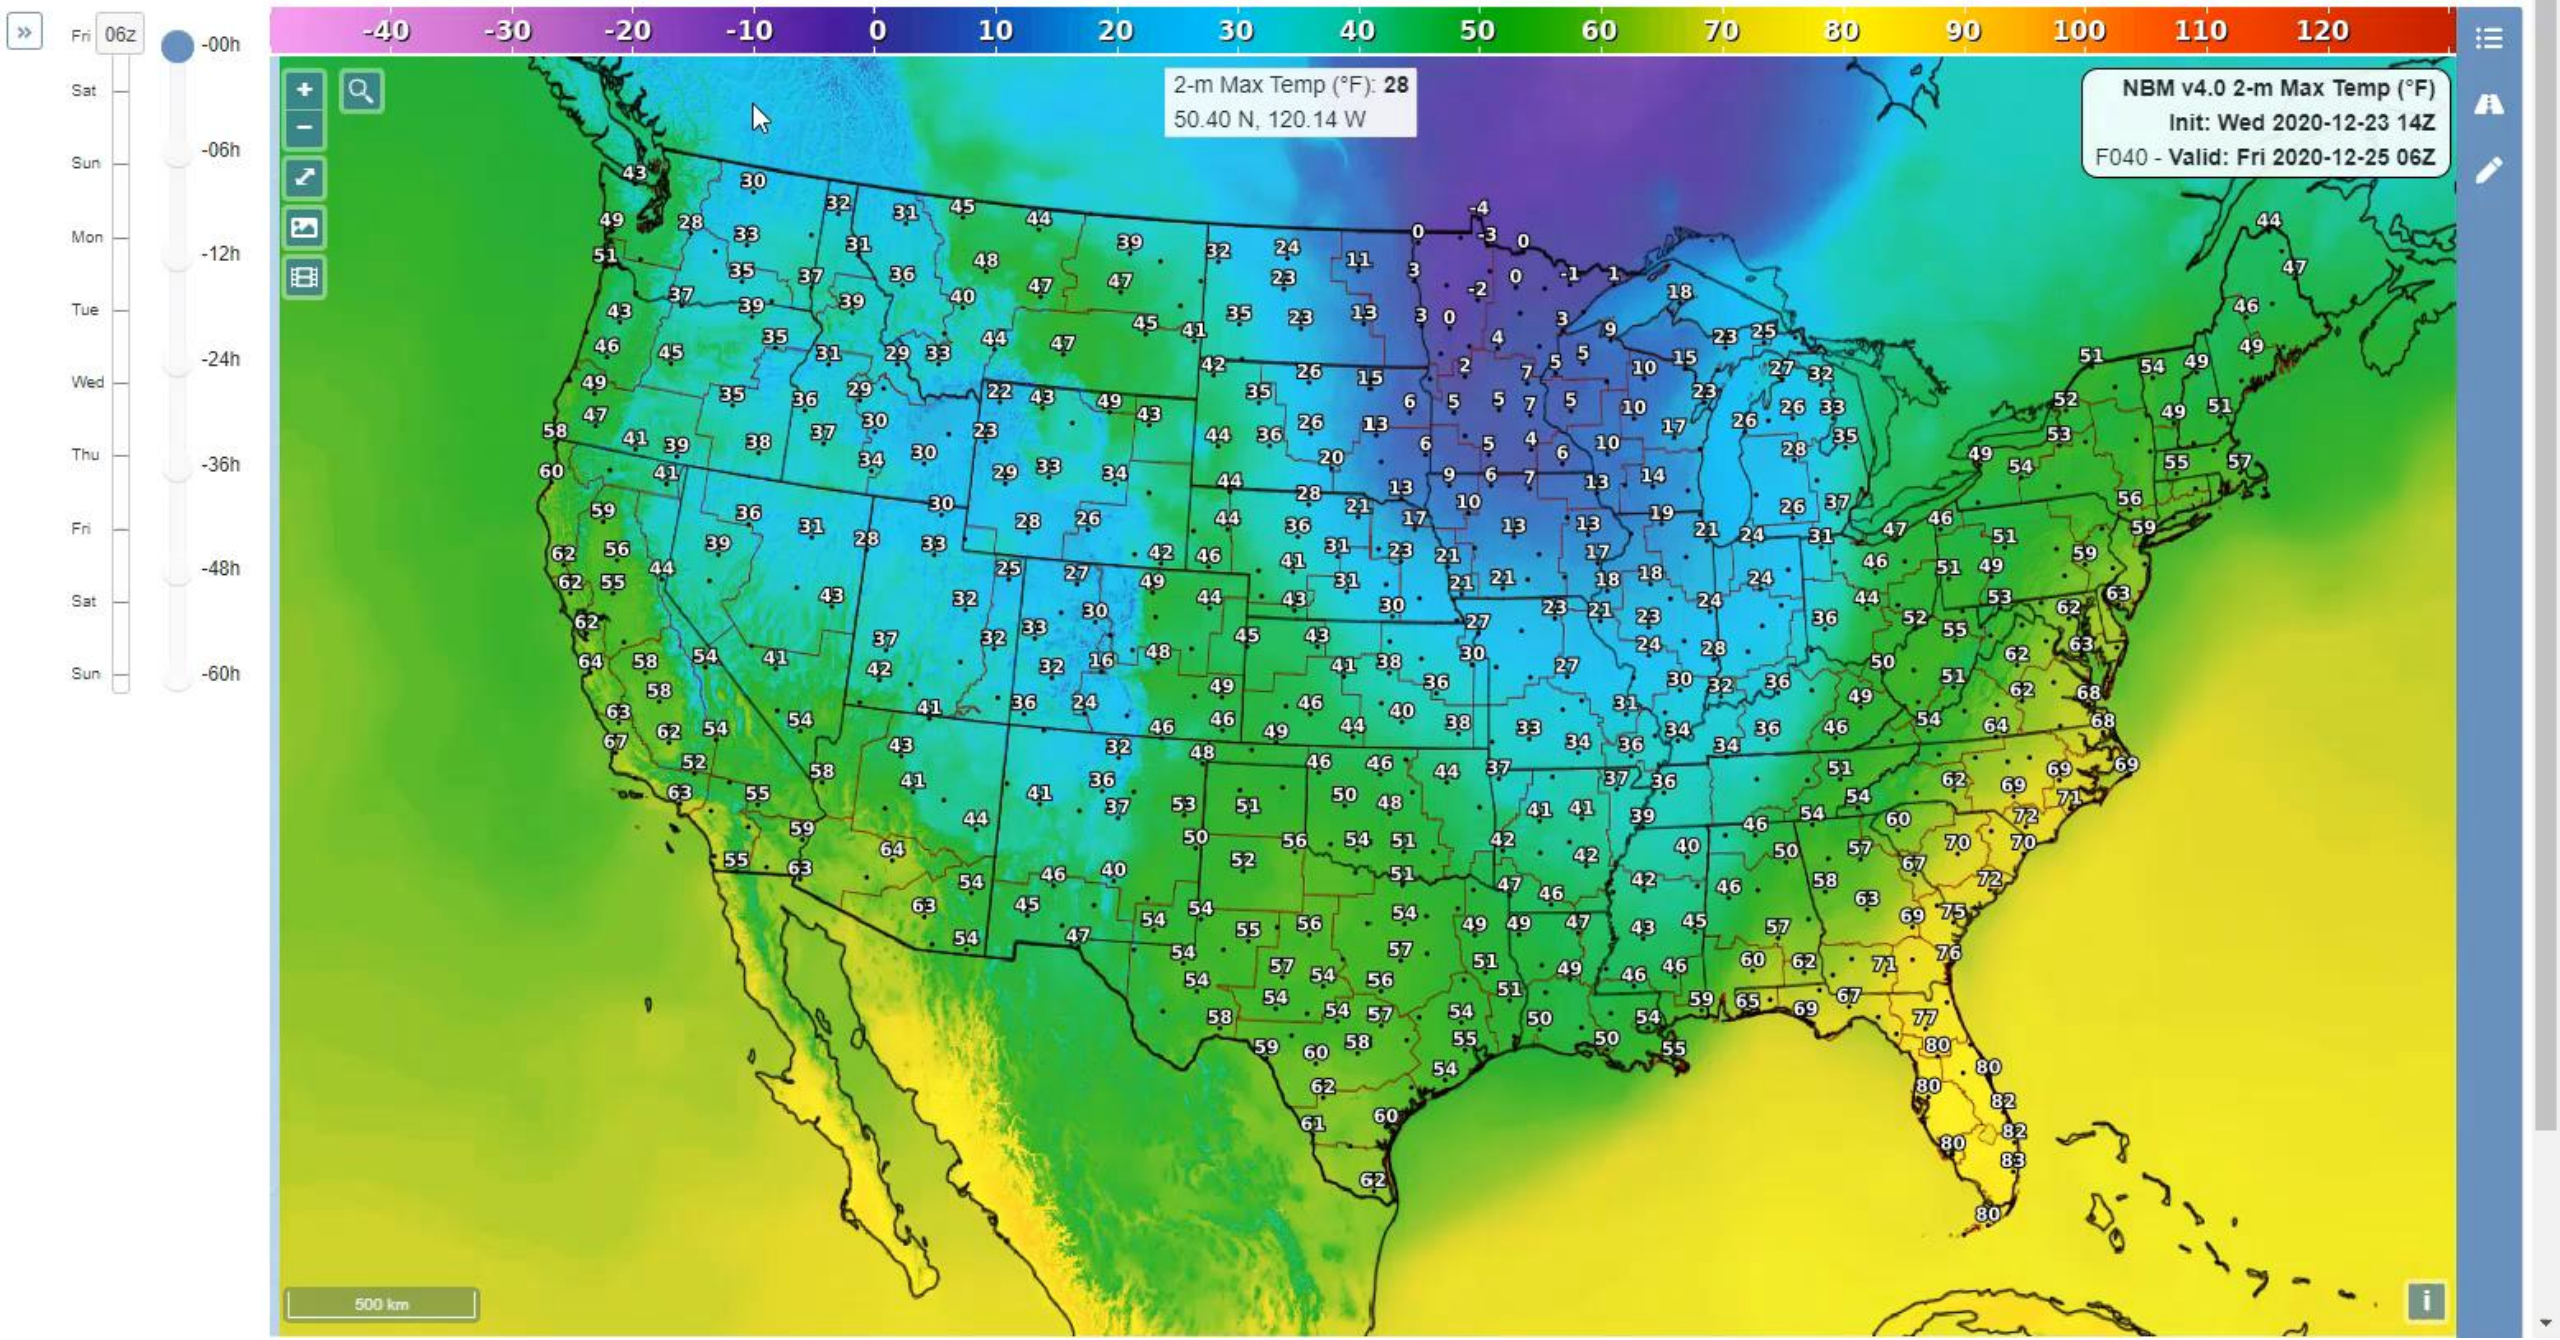

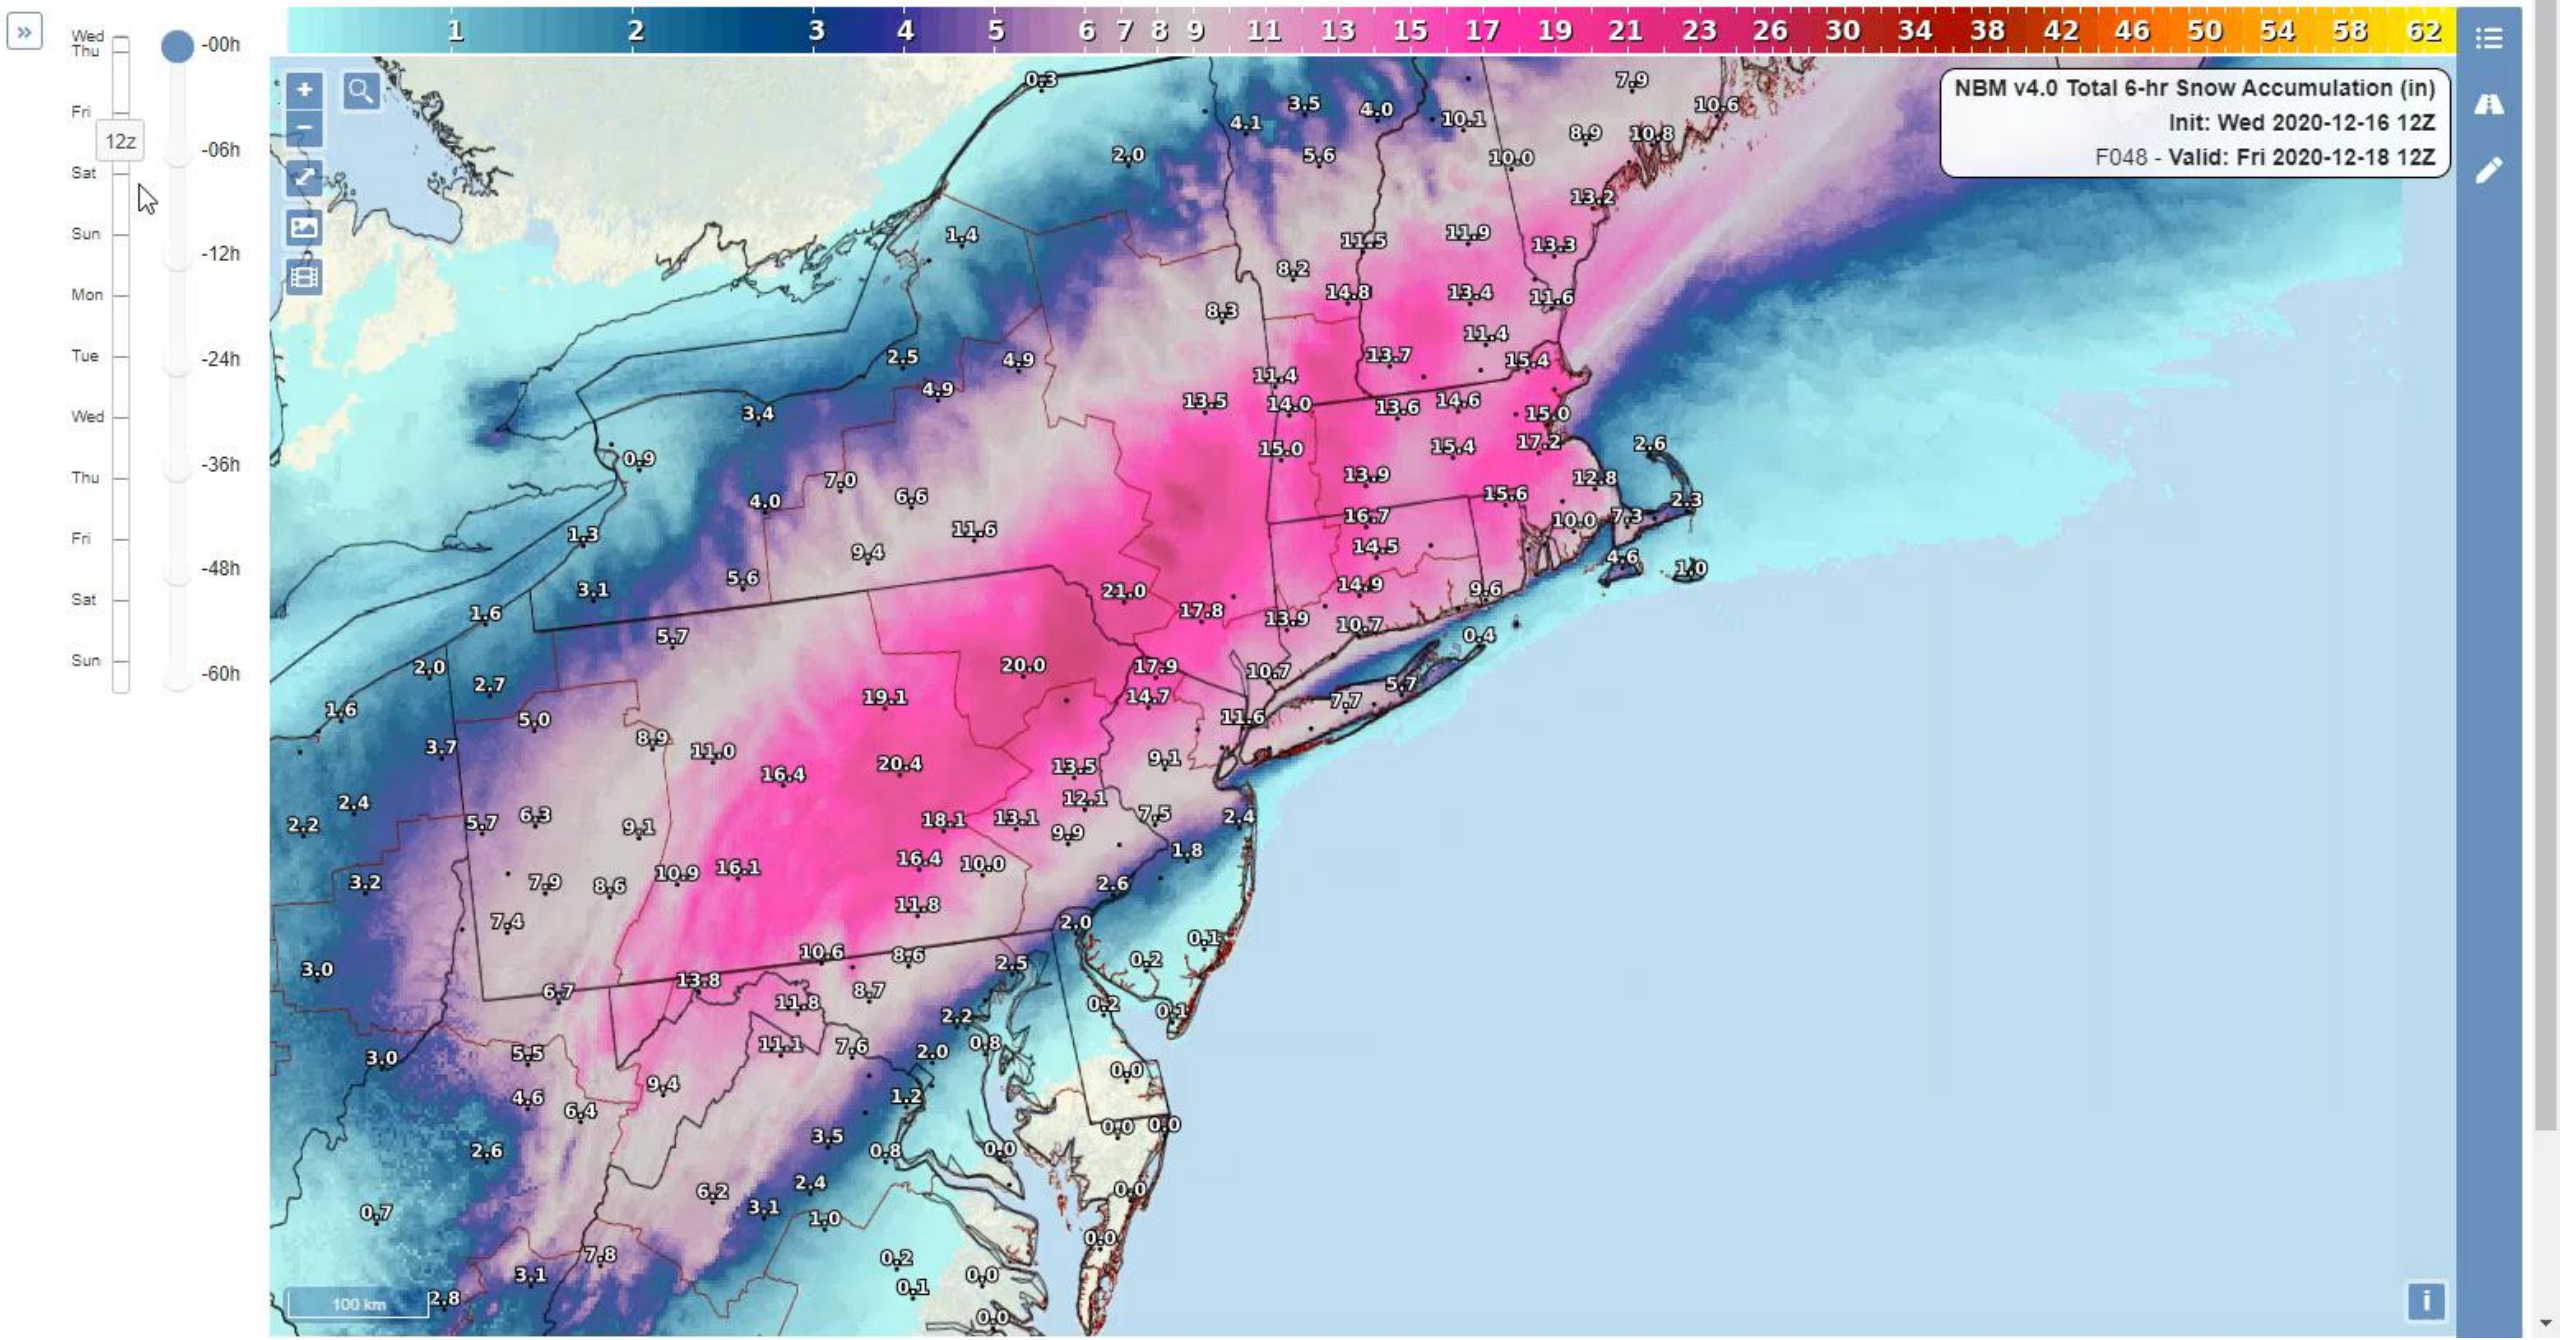

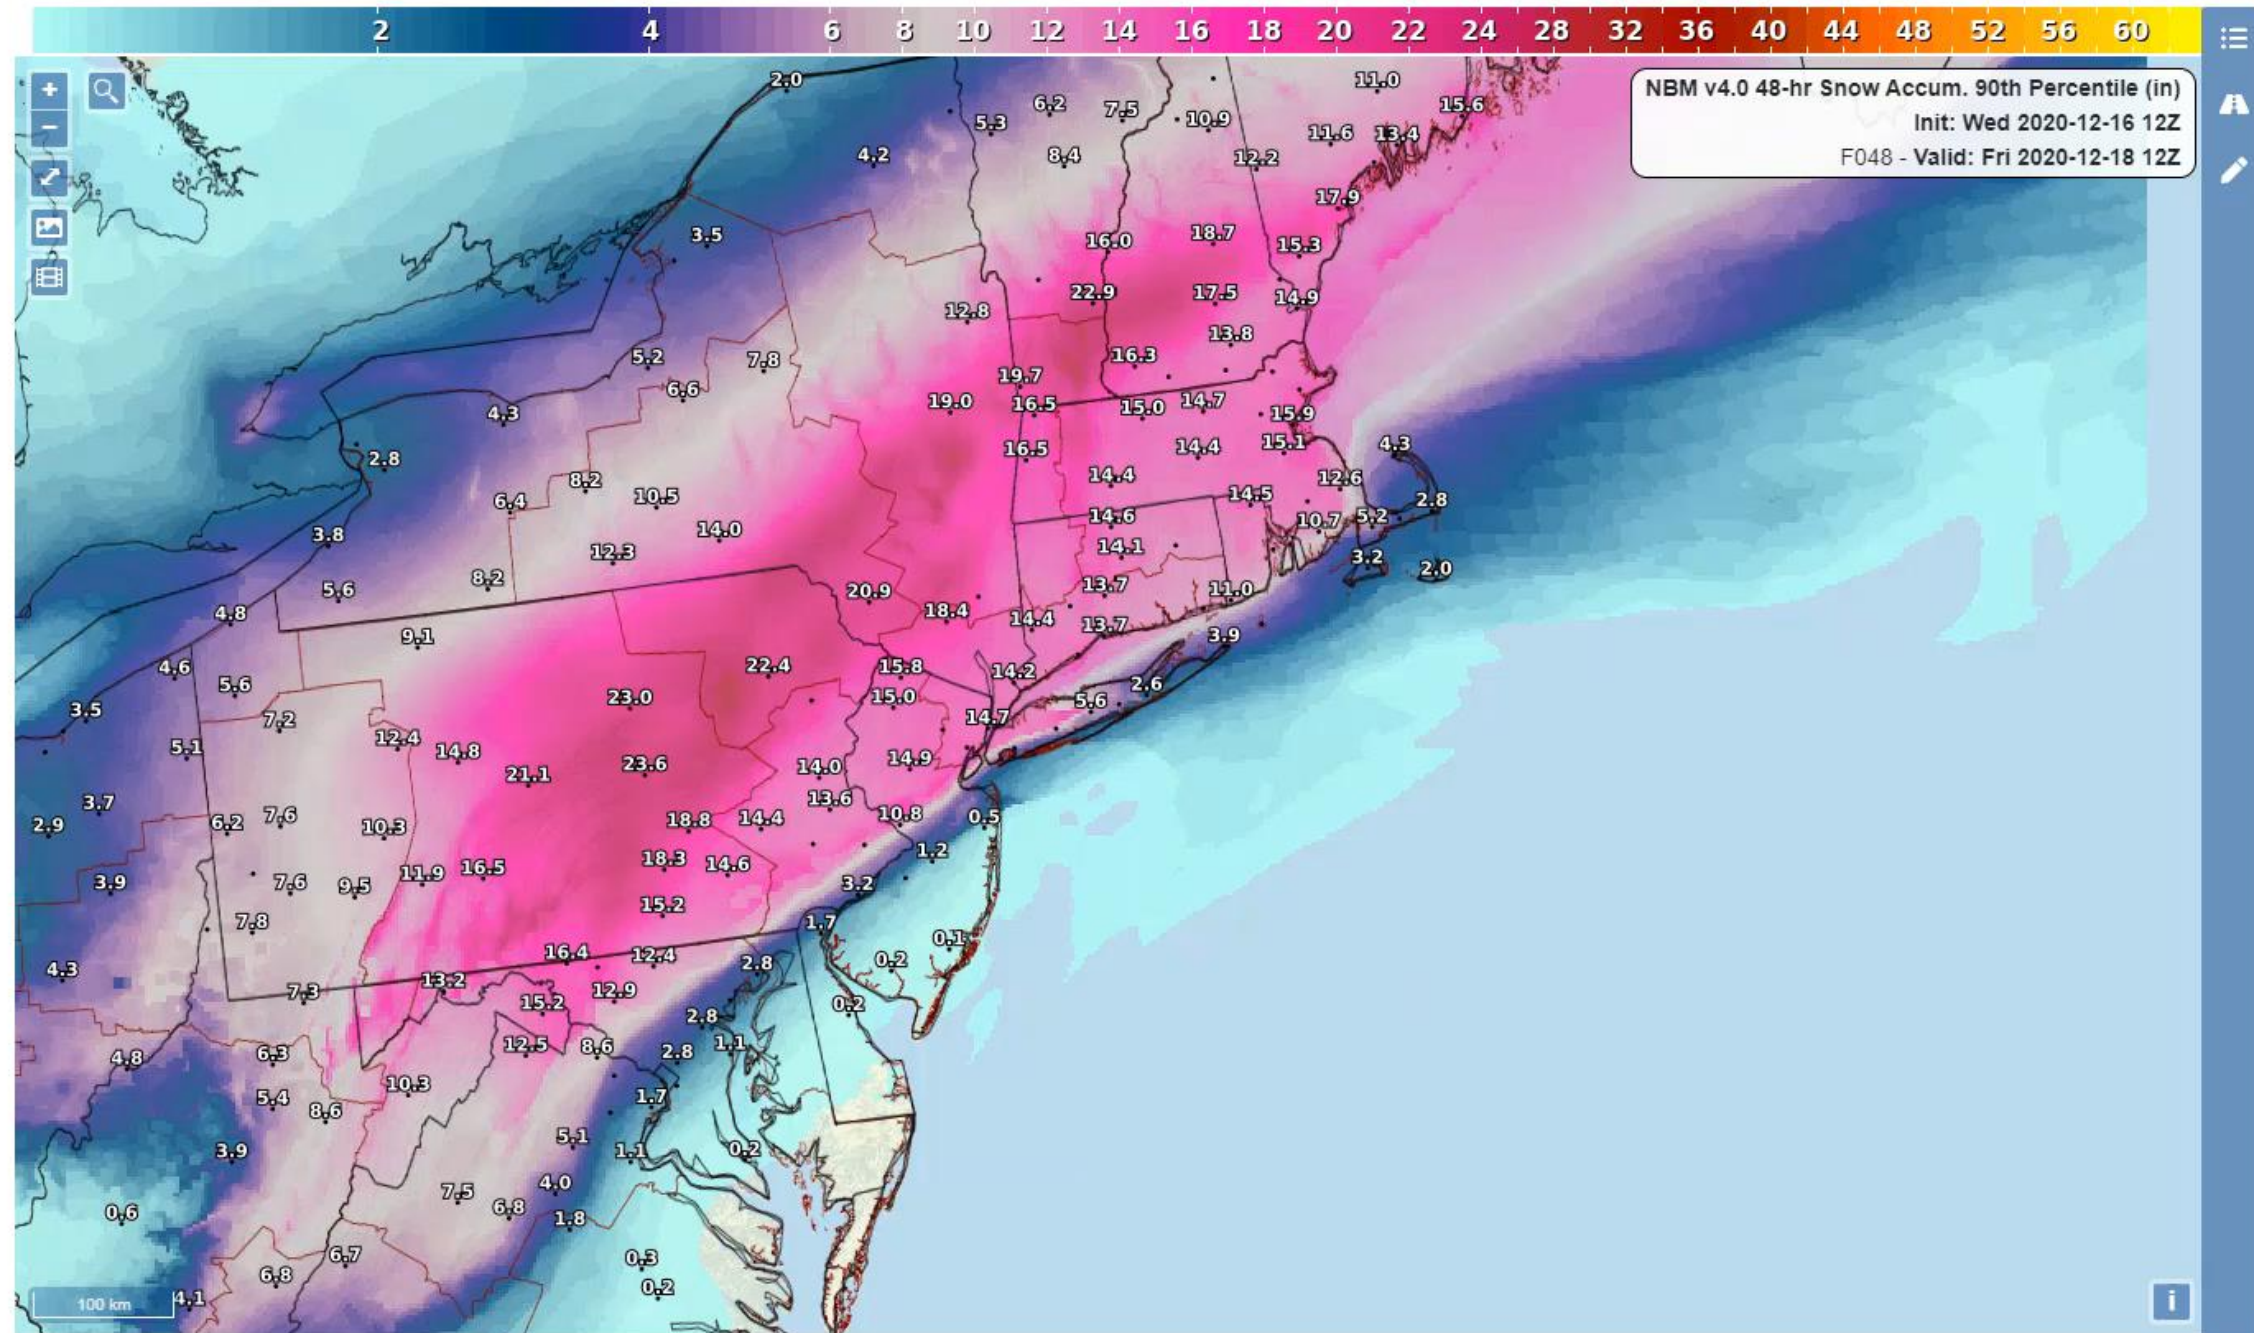

Record-Setting Snowstorm in the Interior Northeast

1. **Event Maximum: 44" near Newark Valley, NY and near Croydon, NH**
(Croydon report is only 5" shy of the 24-hr record for NH set on Mount Washington!)
2. **Potential 24-Hour Pennsylvania State Record: 43.3" near Alba, PA**
(current 38"; requires validation from State Climate Extremes Committee)
3. **Potential 24-Hour Vermont State Record: 42" near Landgrove, VT**
(current 42"; would tie; requires validation from State Climate Extremes Committee)
4. **Two-day snowfall record (40.0") at Binghamton, NY (69y p.o.r.). Snow depth was 39" breaking the record from the Blizzard of '93.**
5. **Two-day snowfall record (24.7") at Williamsport, PA (125y p.o.r)**
6. **8th largest snowstorm on record (22.9") at Albany, NY. 4th largest in the month of December.**
