Importance of MJO teleconnections

Z50

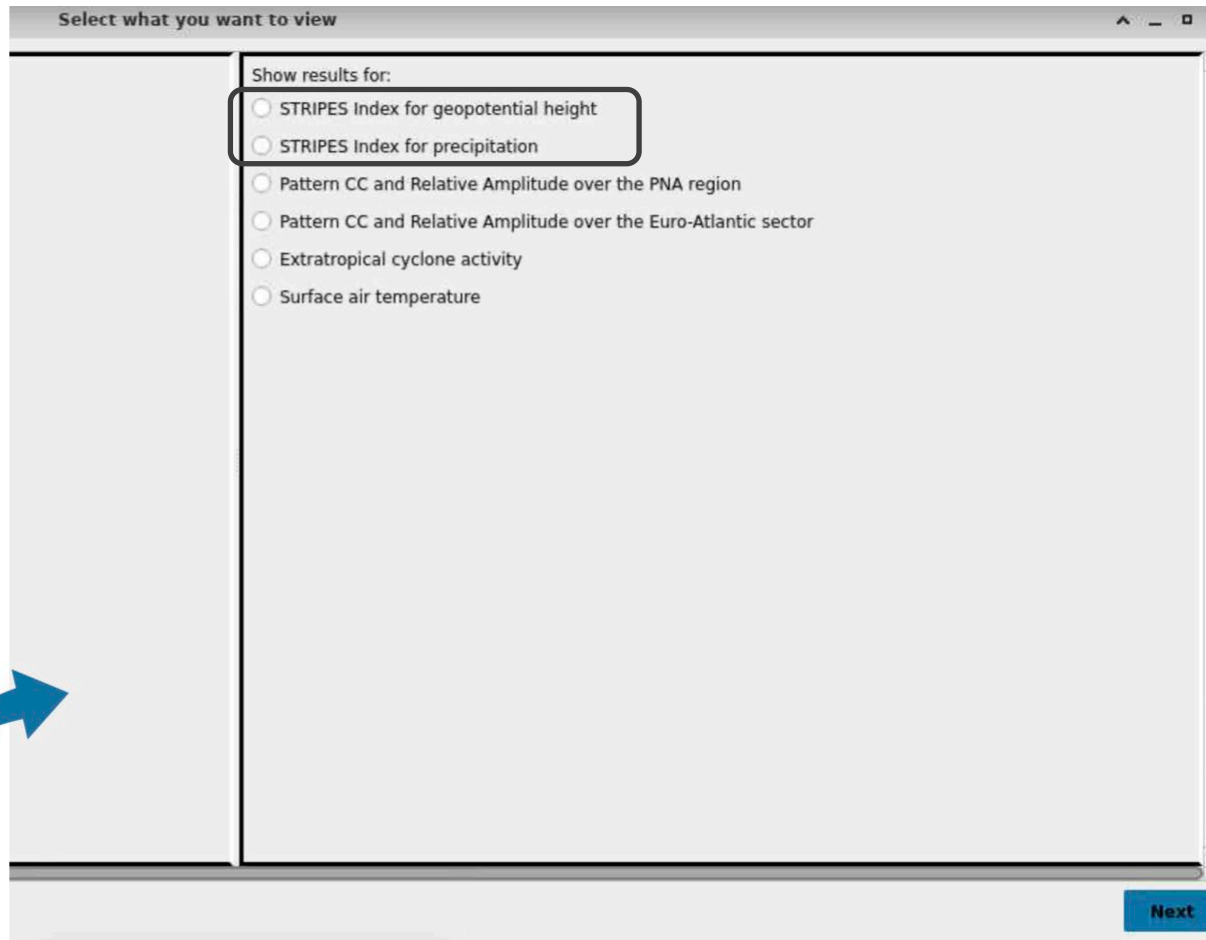

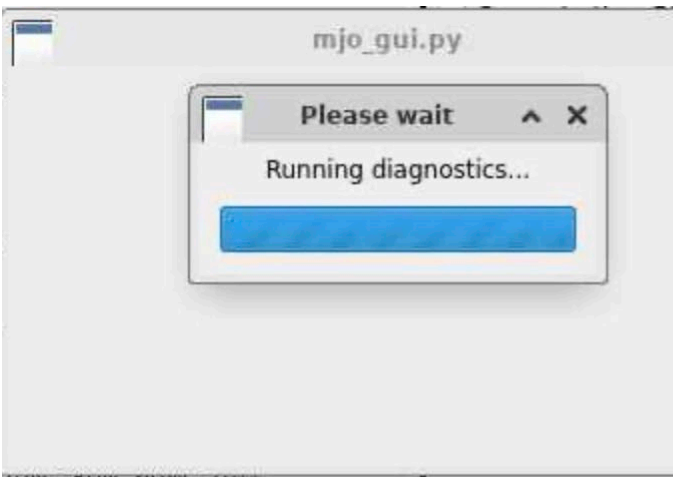

Goal:

- A diagnostic package for evaluation of the MJO and MJO teleconnections.
- The package consists of a graphical user interface (GUI) and a collection of modular evaluation tools, all written in Python.
- The package can be applied to any forecast dataset prepared in the specified format.

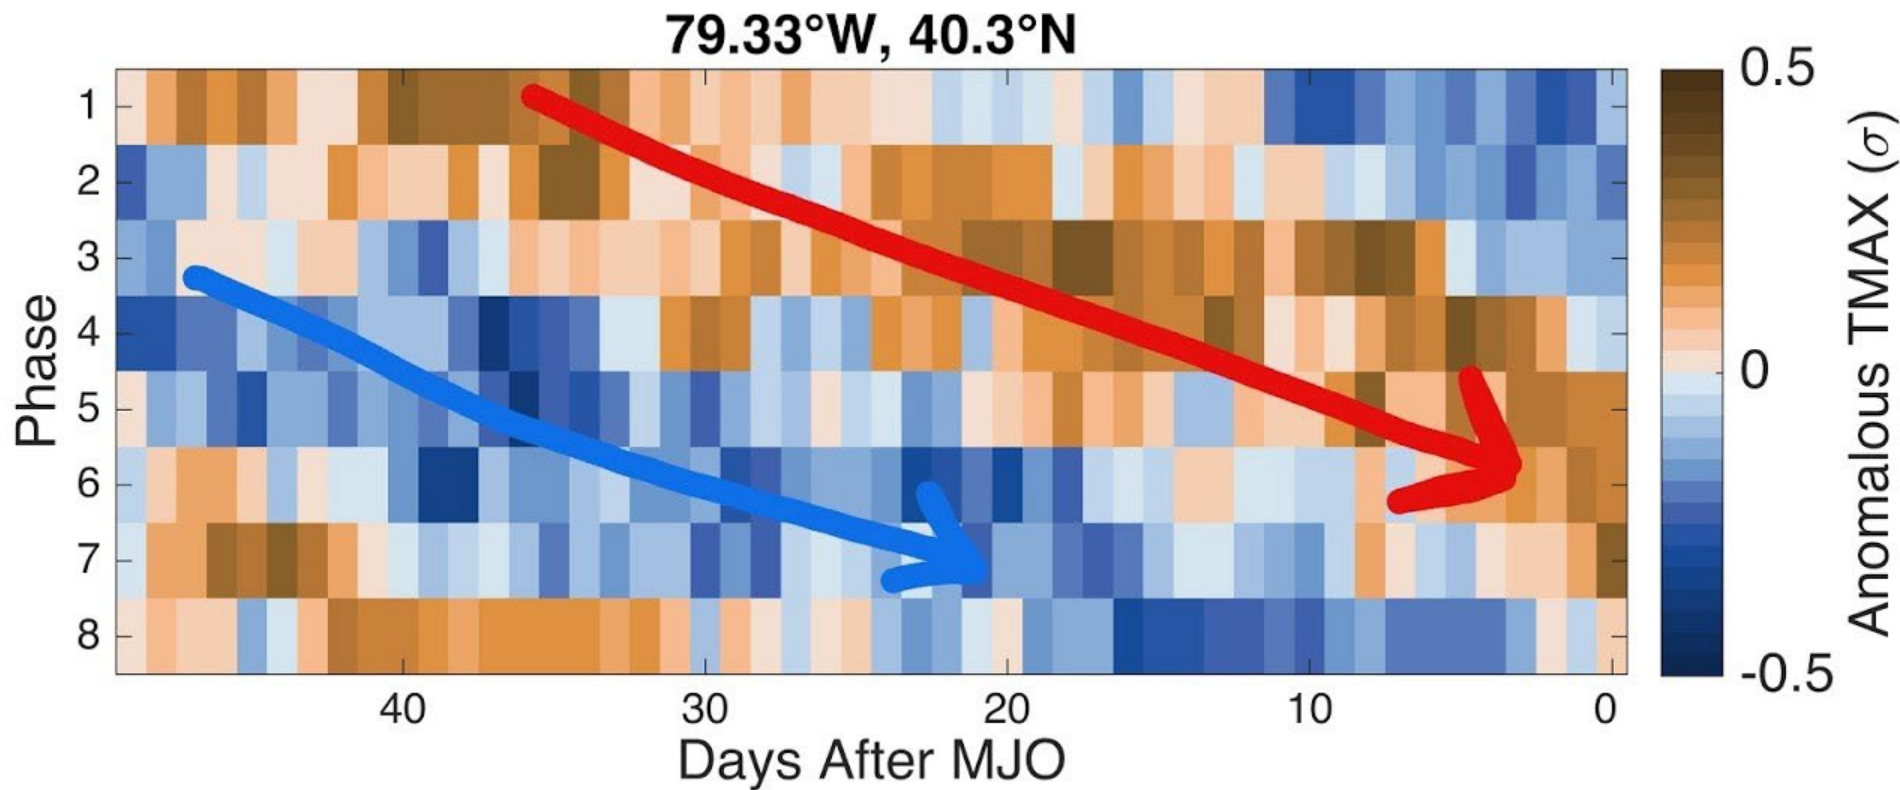

UFS6

STRIPES index (Sensitivity to the Remote Influence of Periodic Events)

STRIPES index, precipitation

IMERG, week 2-3

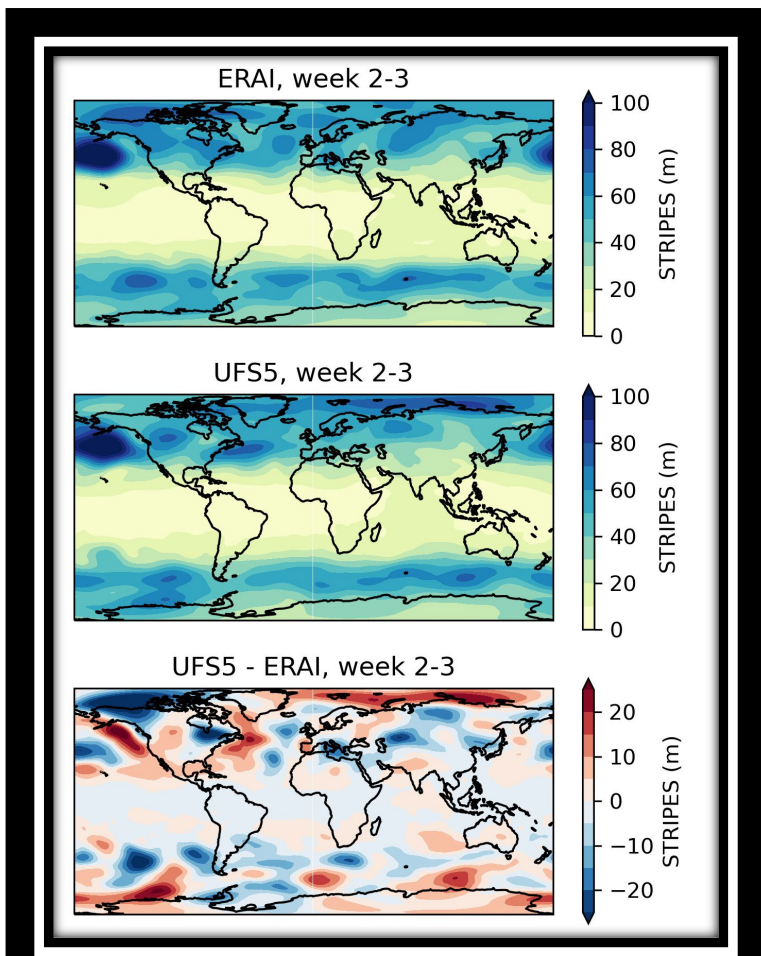

UFS5, week 2-3

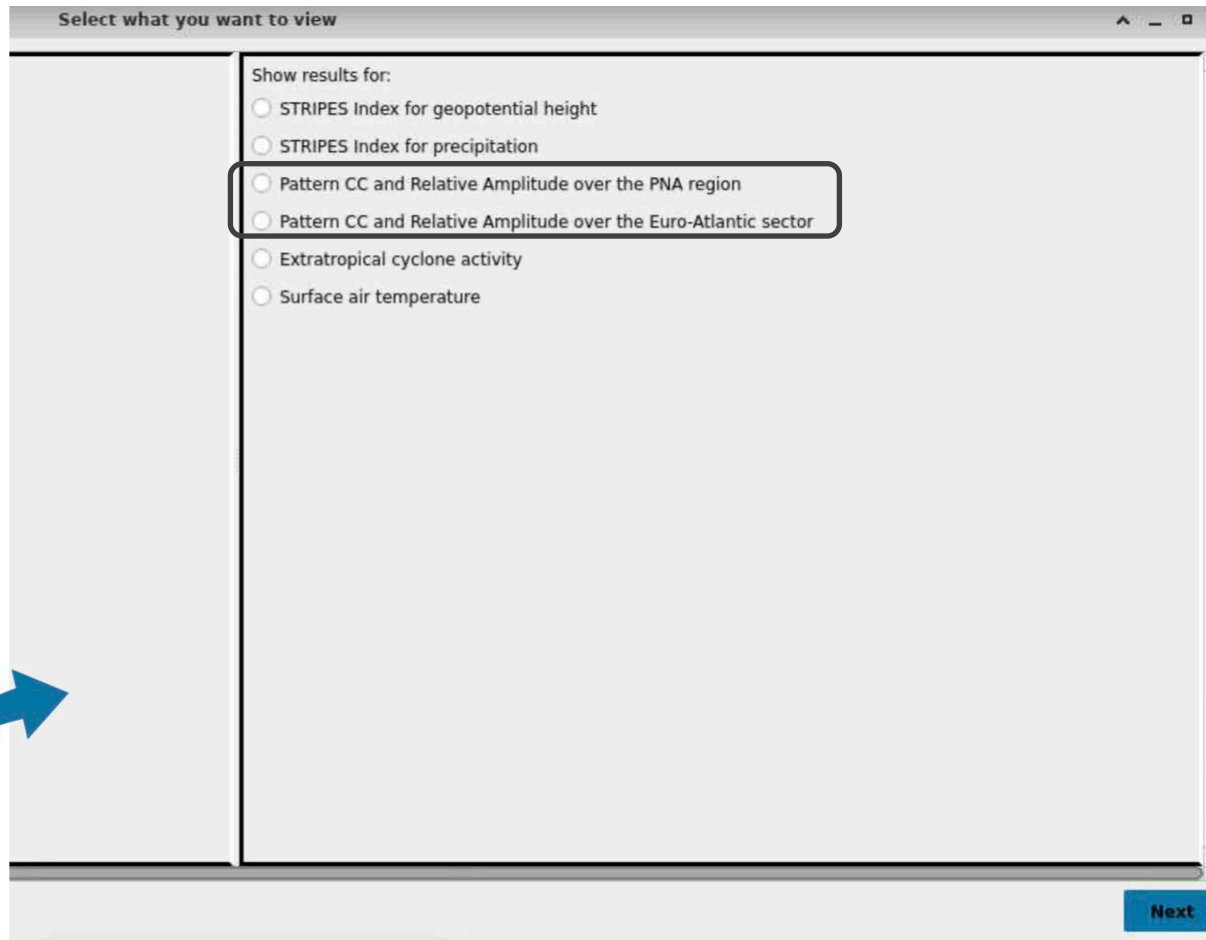

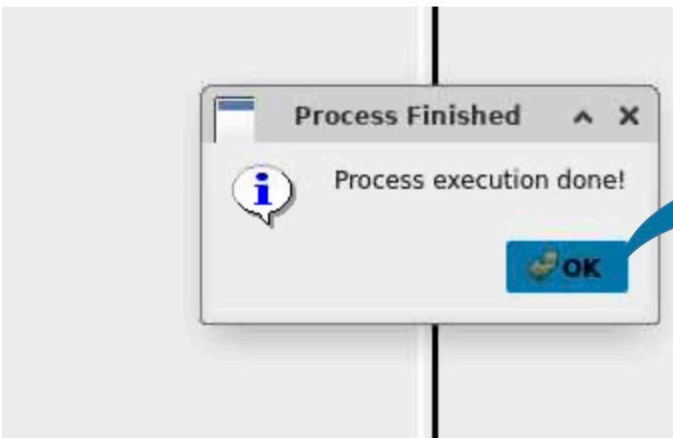

UFS5 - IMERG, week 2-3

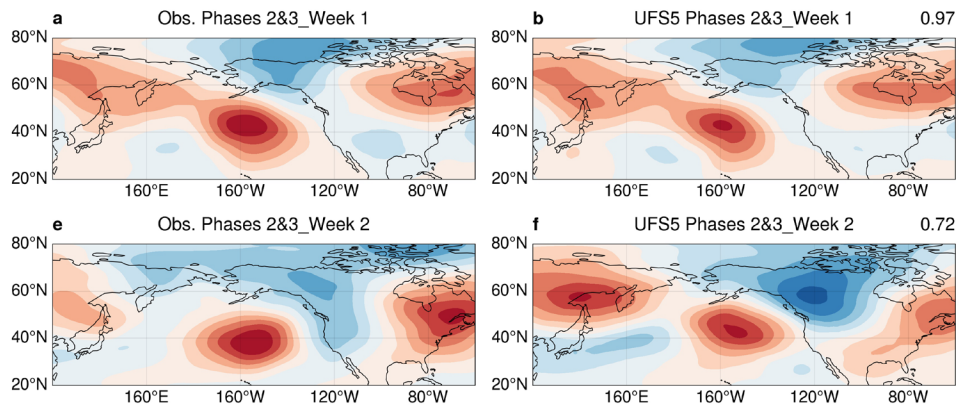

STRIPES index, Z500hPa

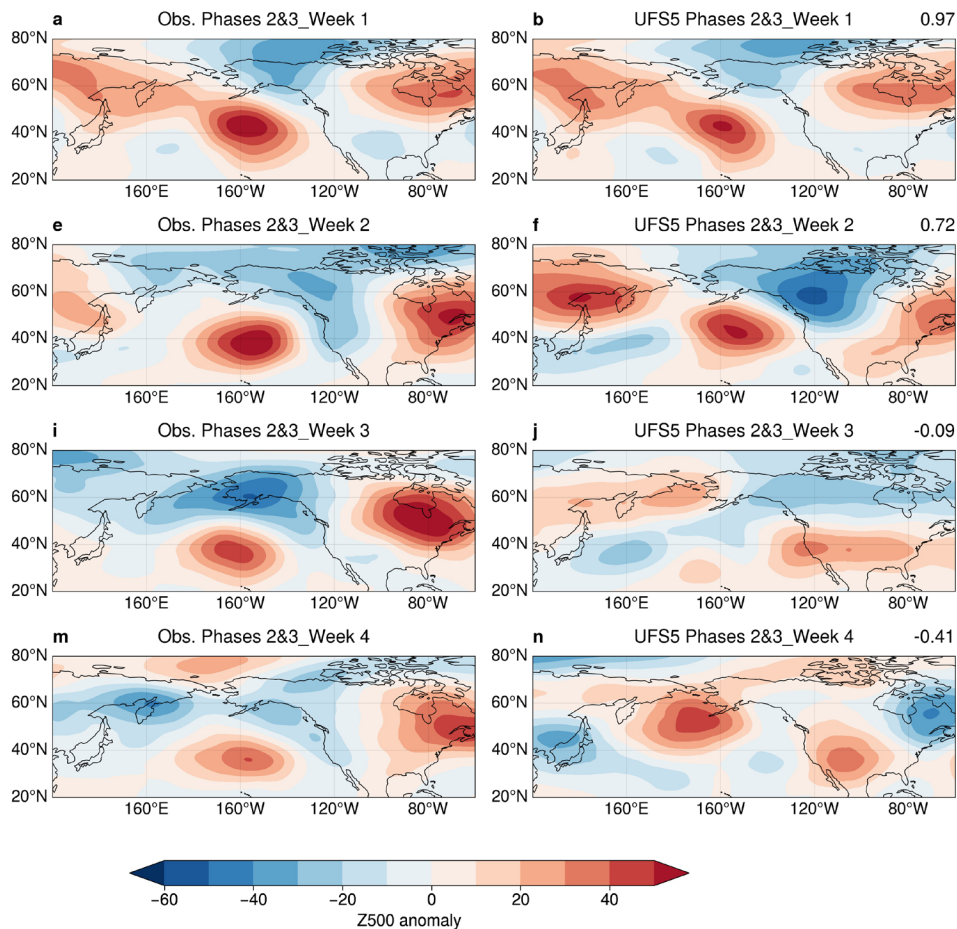

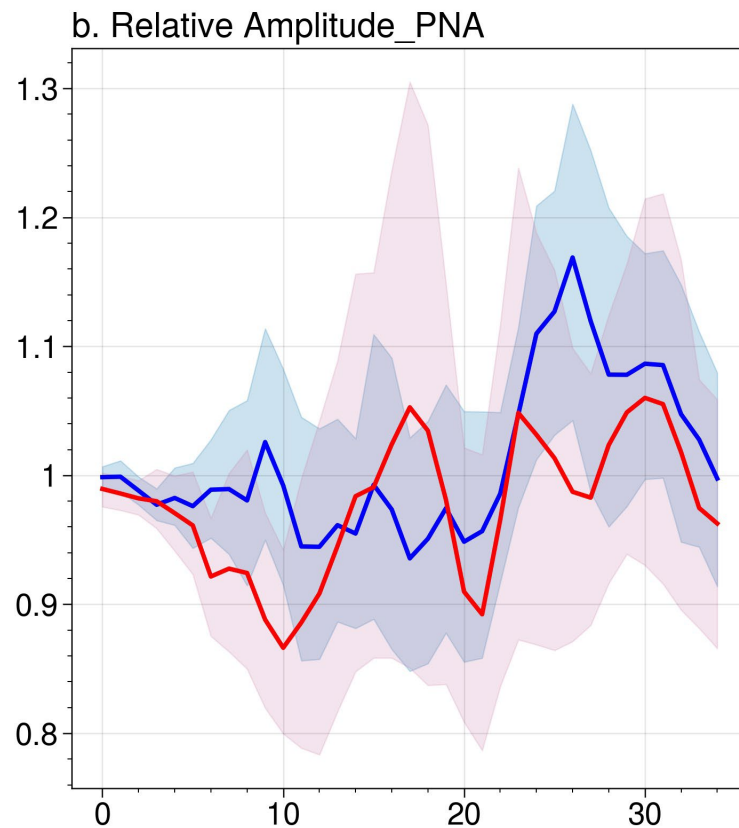

Relative amplitude and pattern correlation, Z500hPa

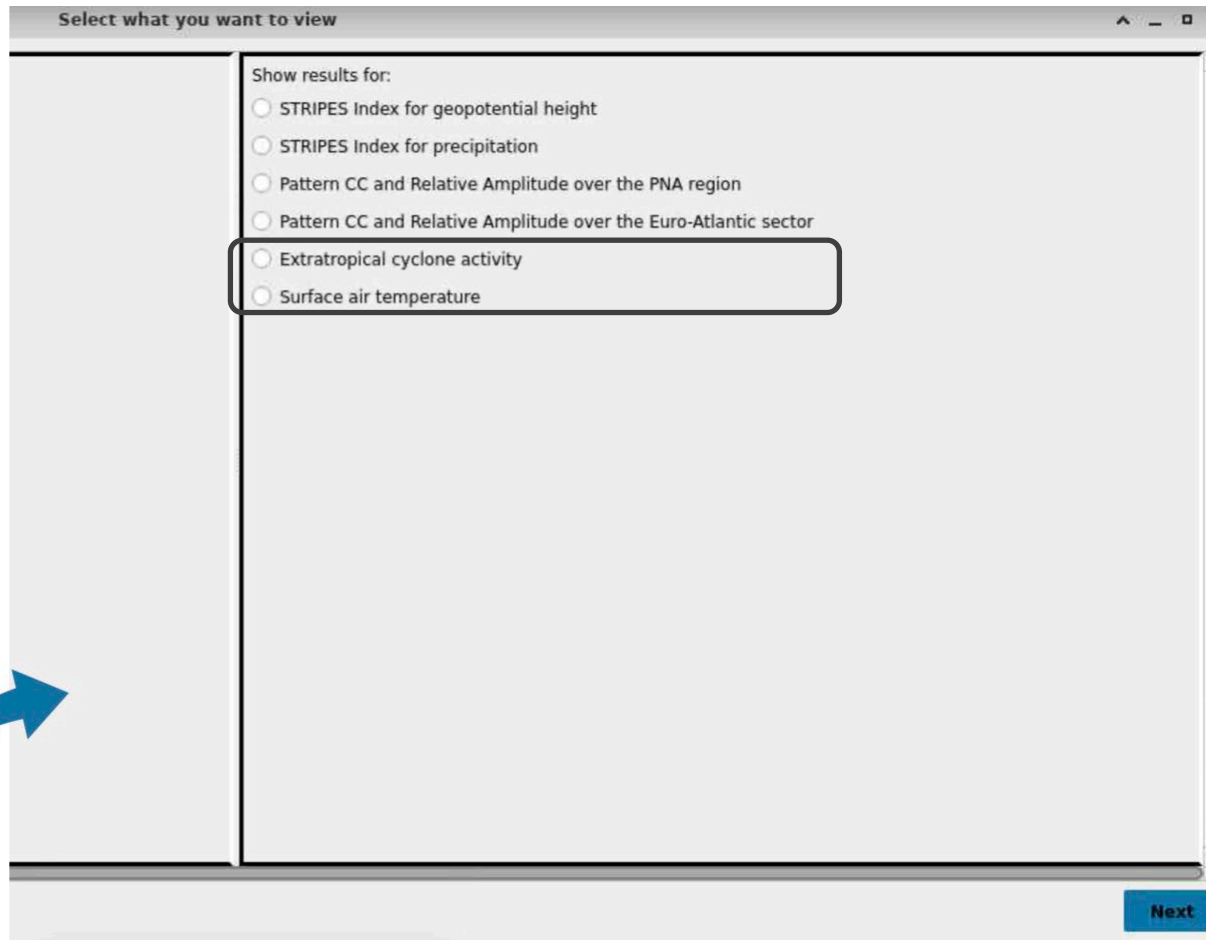

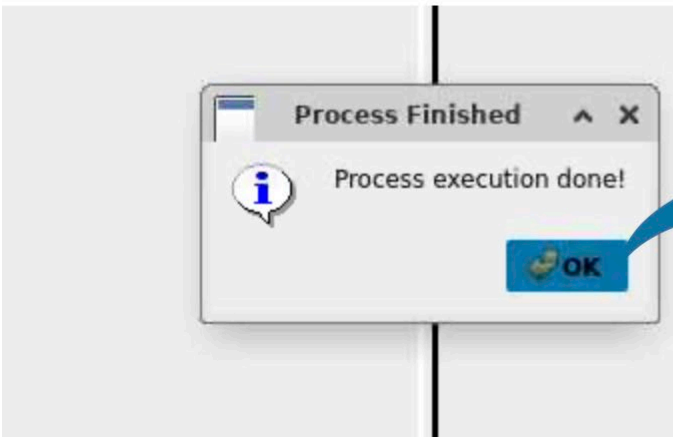

Relative amplitude and pattern correlation, Z500hPa

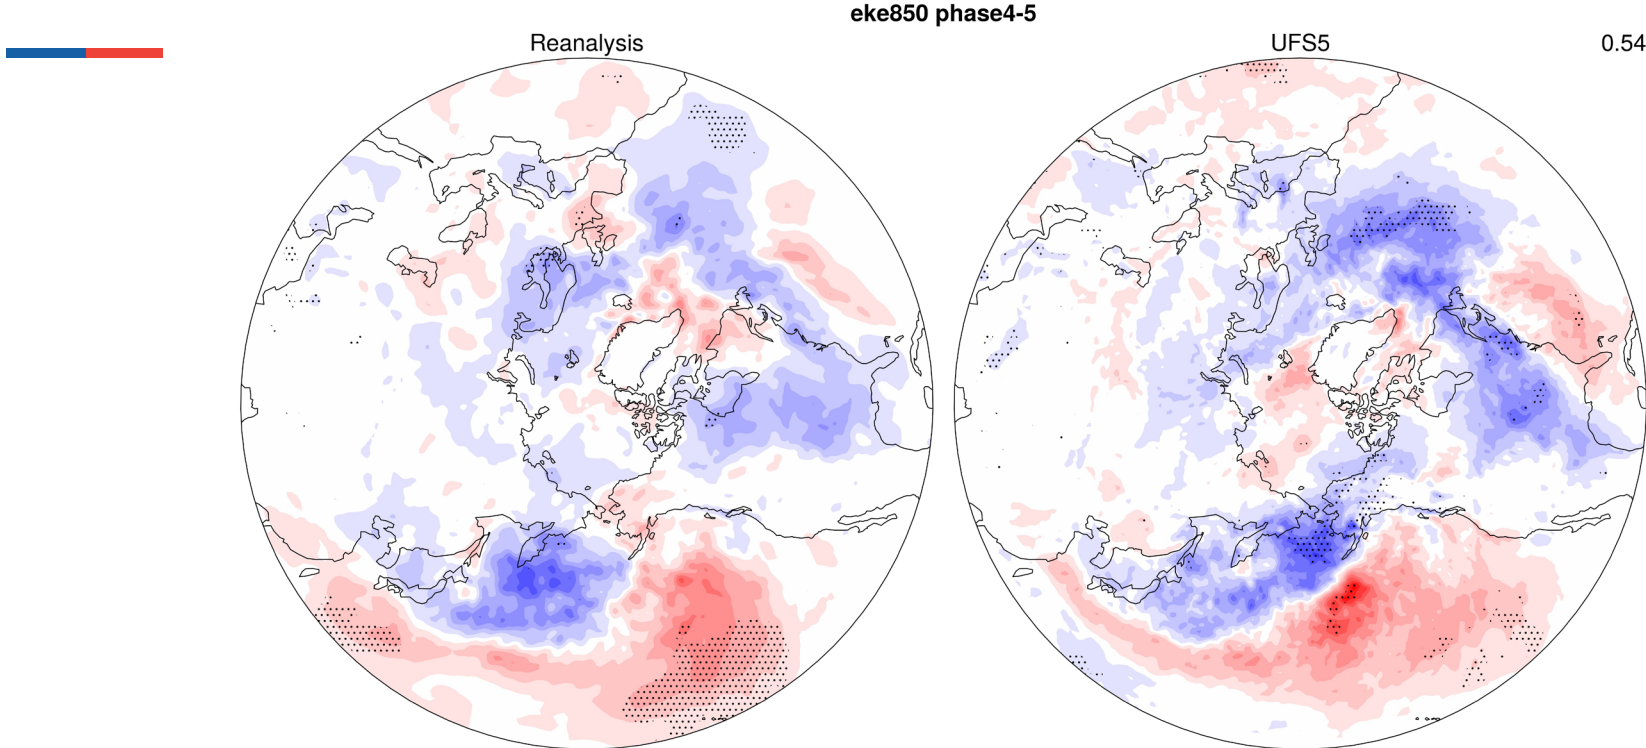

Relative amplitude and pattern correlation, Z500hPa

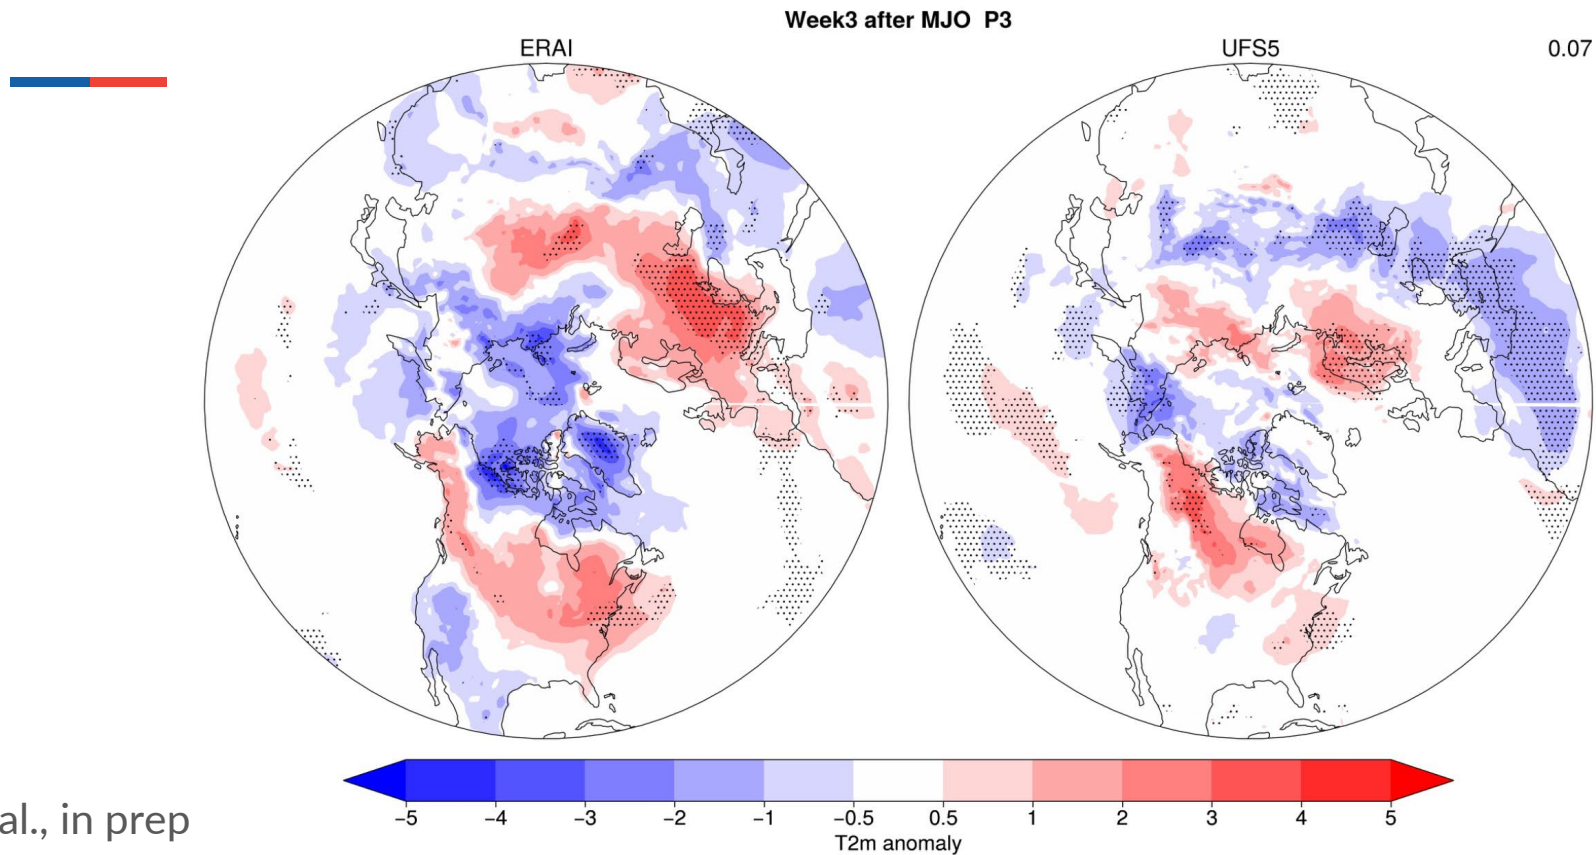

Cyclone Activity

Surface temperature

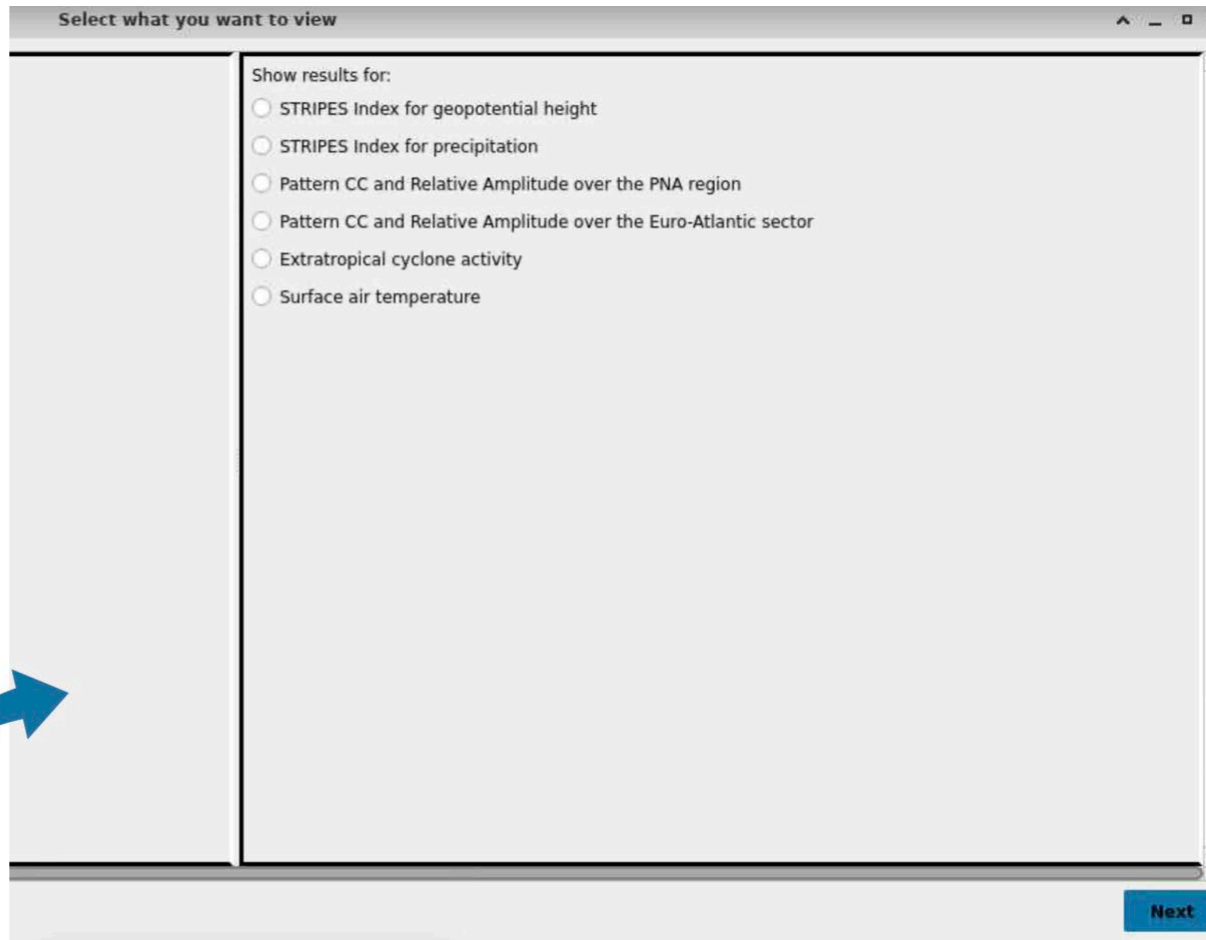

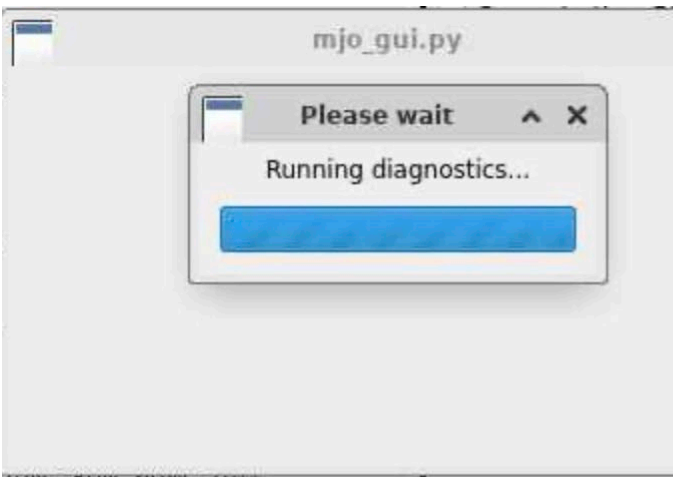

Stratospheric Pathway

GUI for the diagnostic package

[Stan et al., in prep]

Summary:

- A diagnostic package for evaluation of the MJO and MJO teleconnections.
- The package consists of a graphical user interface (GUI; optional) and a collection of modular evaluation tools, all written in Python.
- More tools can be added easily, can either using included dataset as input or user specified datasets
- The package can be applied to any forecast dataset.
- We want this this to be useful – please send feedback!

Reforecast length	35 days

Coupled UFS Prototypes

Prototype	Atmospheric Model C384 (~0.25 degree) horizontal resolution			Ocean Model Tripolar ~0.25 degree horizontal resolution	Wave Model Regular lat/lon 0.5 degree grid	Ice Model Tripolar ~0.25 degree horizontal resolution	Mediator
	Dynamical Model	Physics Settings & Driver	Land Model				
P1	FV3 64 layers, Non-Fractional grid (model top at 54km)	GFSv15.2, IPD driver	Noah LSM	MOM6	N/A	CICE5	NEMS
P2							
P3.1							
P4		GFSv15.2, CCPP driver					
P5							
P6	FV3	GFSv16	Noah-MP LSM	MOM6	N/A	CICE6 (Mushy TD not turned on)	CMEPS
P7	127 layers, Fractional grid (model top at 80km)	Modified GFSv16					
P8		Further Modified GFSv16					

(P8+ includes one-way coupled aerosols)

A UFS Collaboration Powered by EPIC
