# Data-Driven ML Models

- Data-driven ML models run on a fraction of resources used to run physics-based models
- ML leads to an explosion of new models, and increase of resolution (spatial/ensemble)

**Copernicus ERA5:**  
15 billion (one off)

*Hersbach, H et al. (2020)*

**Training dataset**  
**Based on a physical model**

**Physics-based Forecast:**

180 000  
per forecast

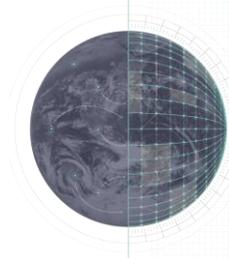

**AI Model:**

0.3  
per forecast

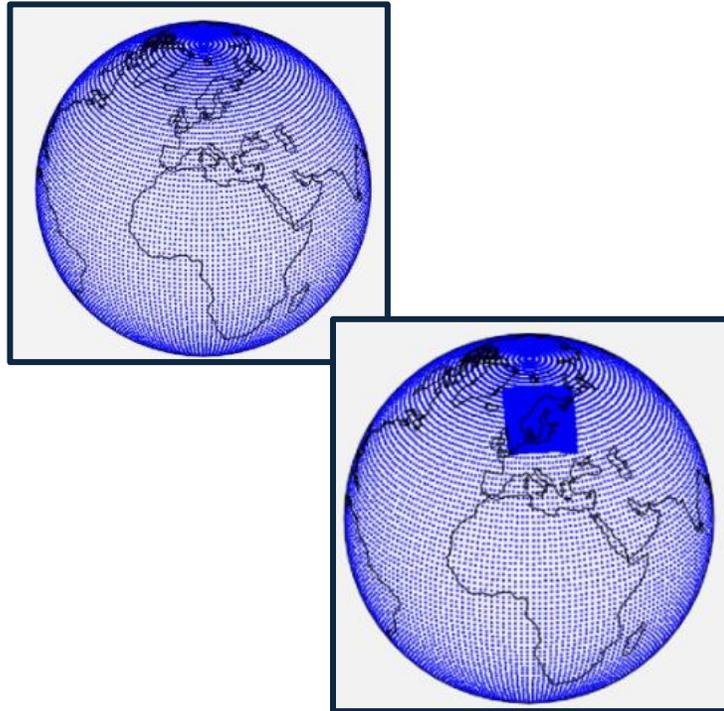

~1000x  
reduction in  
energy  
Forecast time  
reduced from  
~30minutes to  
~3minutes

Unit: System Billing Units (SBU)

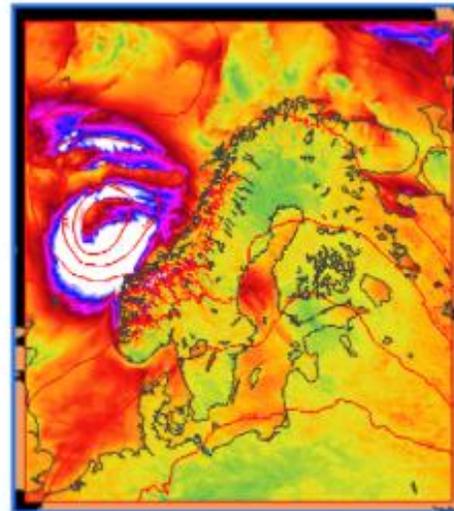

# Bris Model – Local Area Model

Does a data-driven model trained on one domain generalize to another?

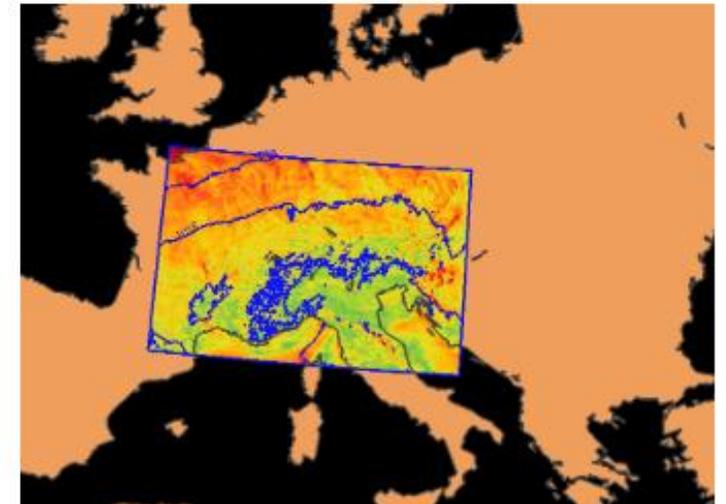

Trained on:

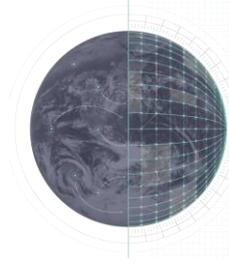

- MEPS 2.5 km analyses 2020-2023
- 1000 \* 950 grid points
- Biggest mountain: 2019 m

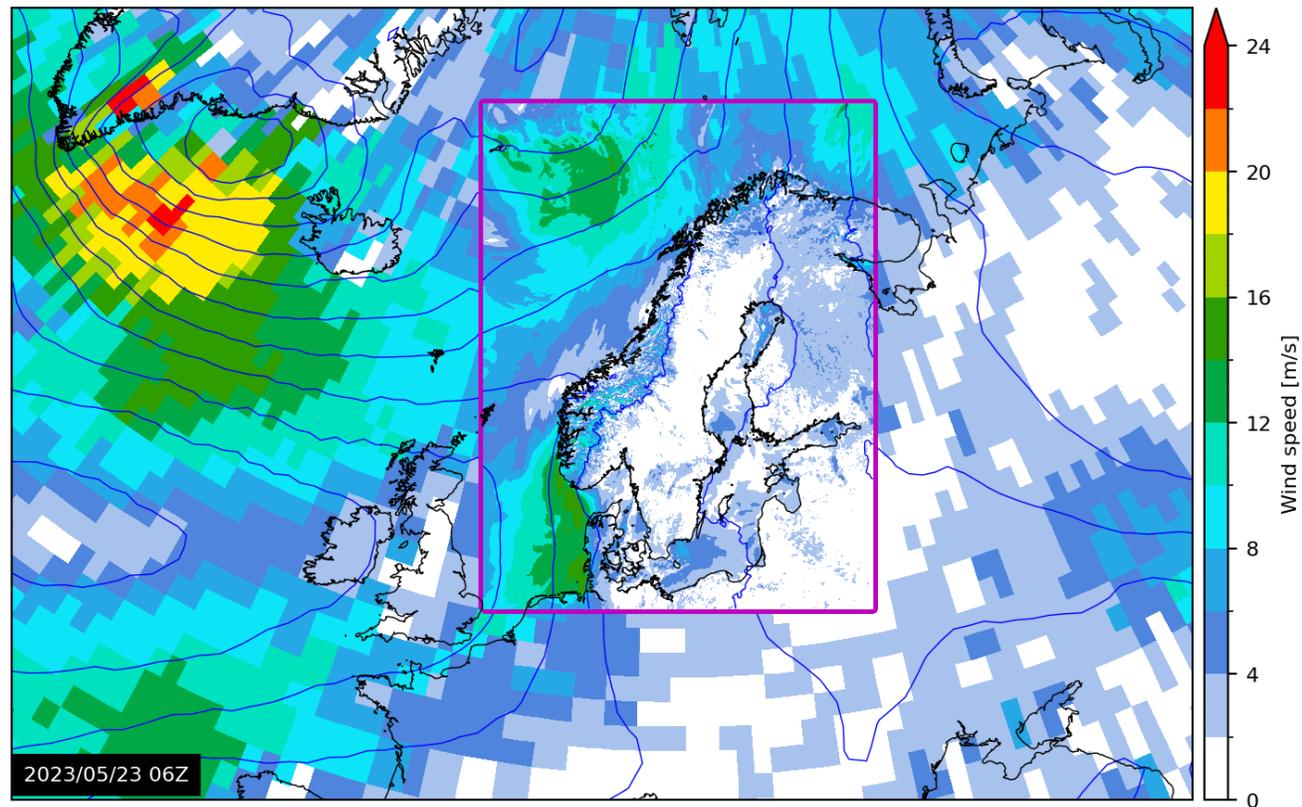

Inference on:

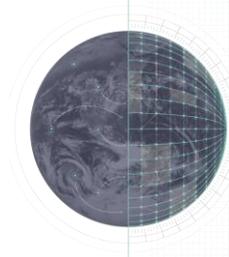

- COSMO 2 km analyses (Feb 2020)
- 290 \* 582 gridpoints
- Biggest mountain: 3867 m

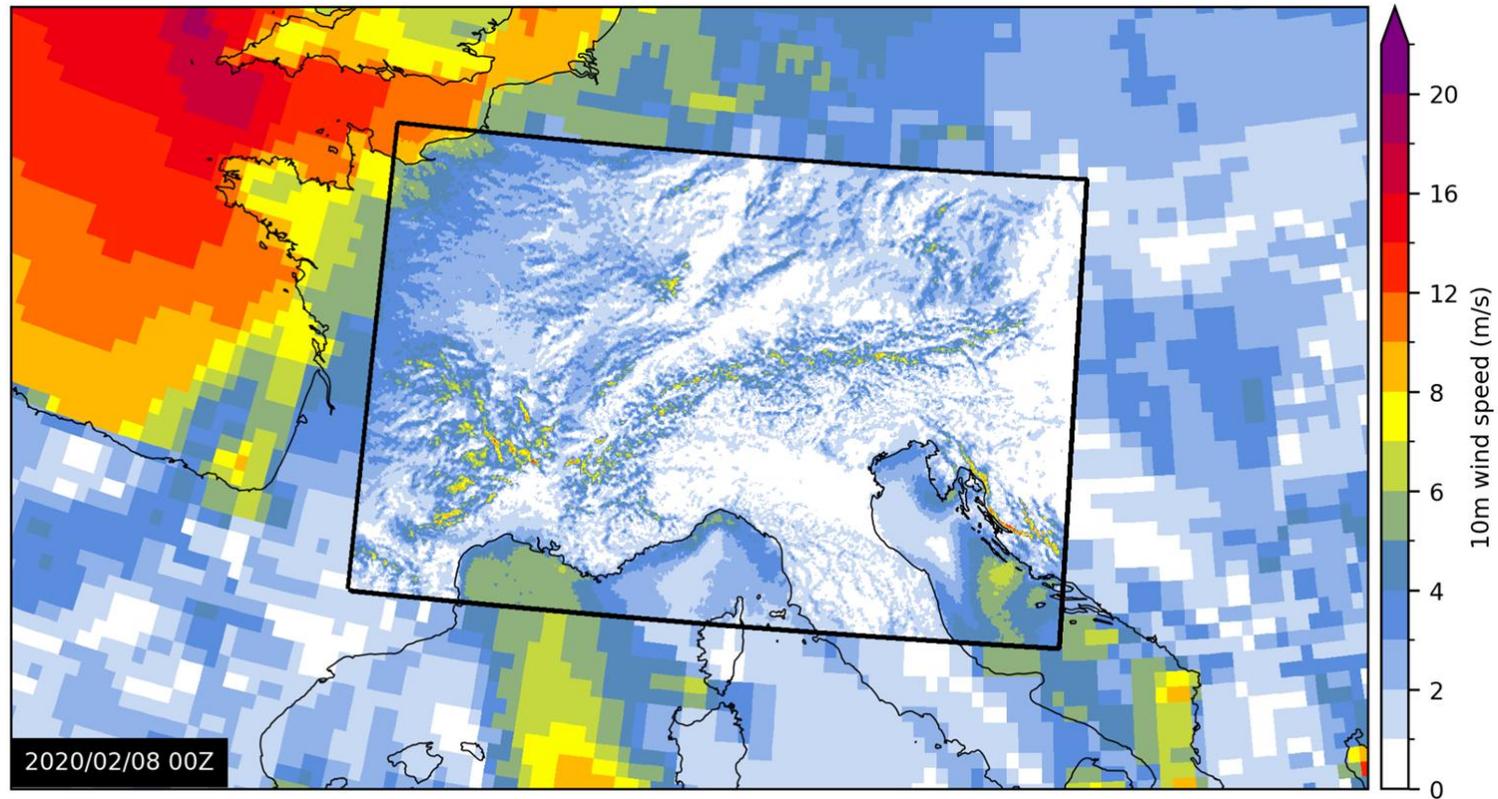

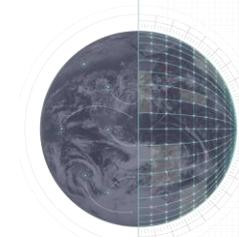

# The Bris Model ...

# ... Can Run Anywhere!

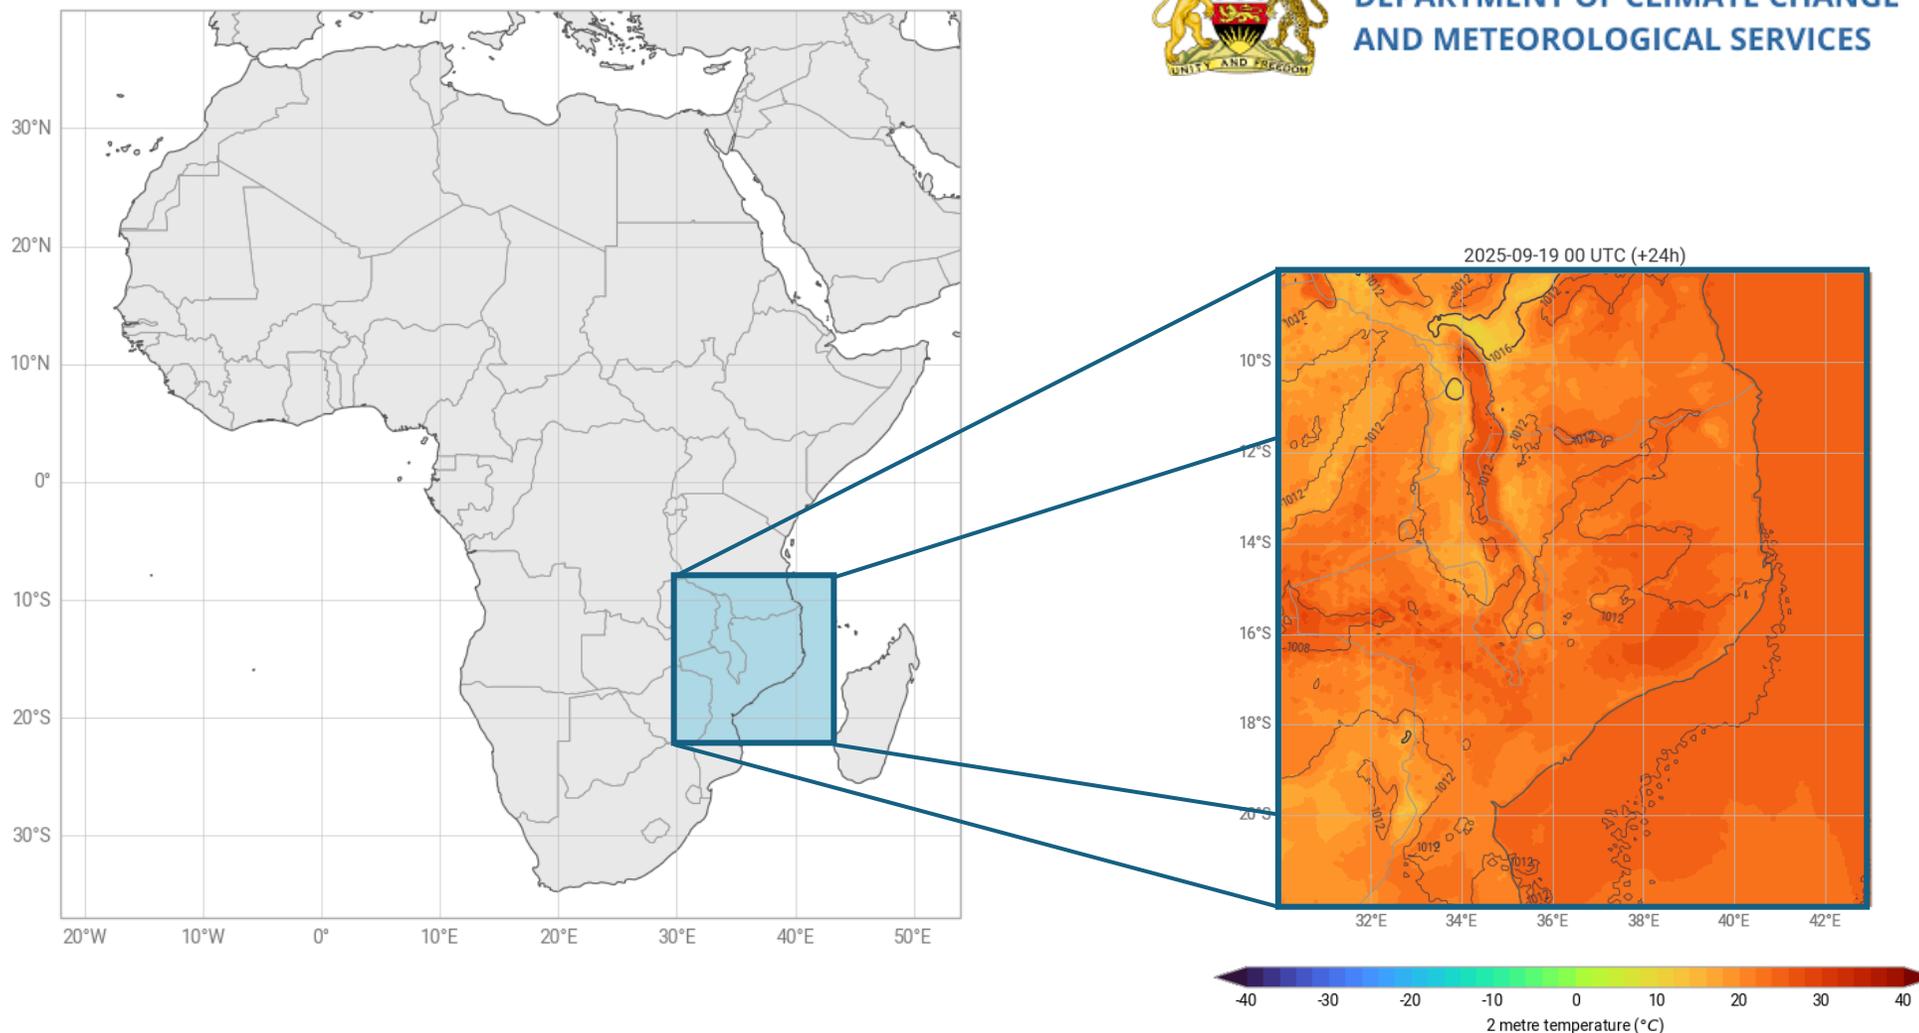

# WMO/Malawi Pilot Project

MINISTRY OF NATURAL RESOURCES AND CLIMATE CHANGE  
DEPARTMENT OF CLIMATE CHANGE  
AND METEOROLOGICAL SERVICES

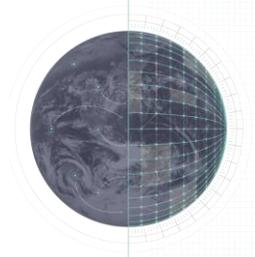

Bringing it from Norway...

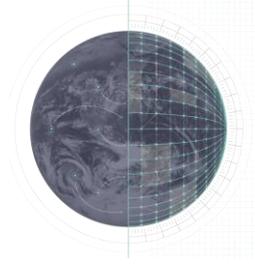

...to Malawi

# Data-Driven ML Models

- Easy to run
- But the data is too large to ship to users
  - Send the model instead?
- (or) Give them the “box” that makes the data
- Drastic simplification of running a forecast

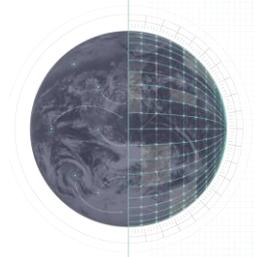

# The goal

- Run the Bris Model Within Forecast-in-a-Box
- Deliver a fully packaged forecasting system
  - End to end
- Intuitive for forecasters
  - Get the data that they need, when they need it
- Accelerate the adoption of AI Weather models

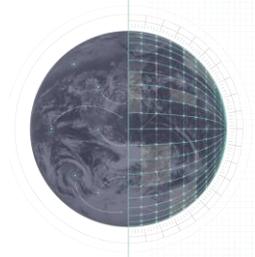

# Impact

- “Democratisation” of Weather forecasts
  - No longer limited to big meteorological organisations
- Faster / Higher Resolution / More accurate\*?
- Early warnings for communities that need it most
- Training cost upon the larger organisations
  - Inference used by everyone else

\* On certain metrics

# What's in the box?

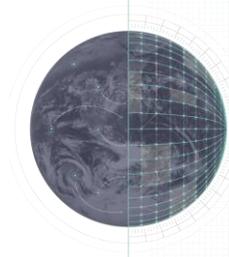

**earthk**

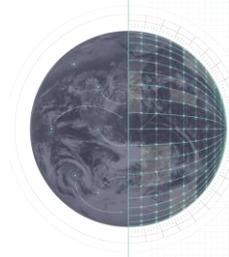

**anemoi**

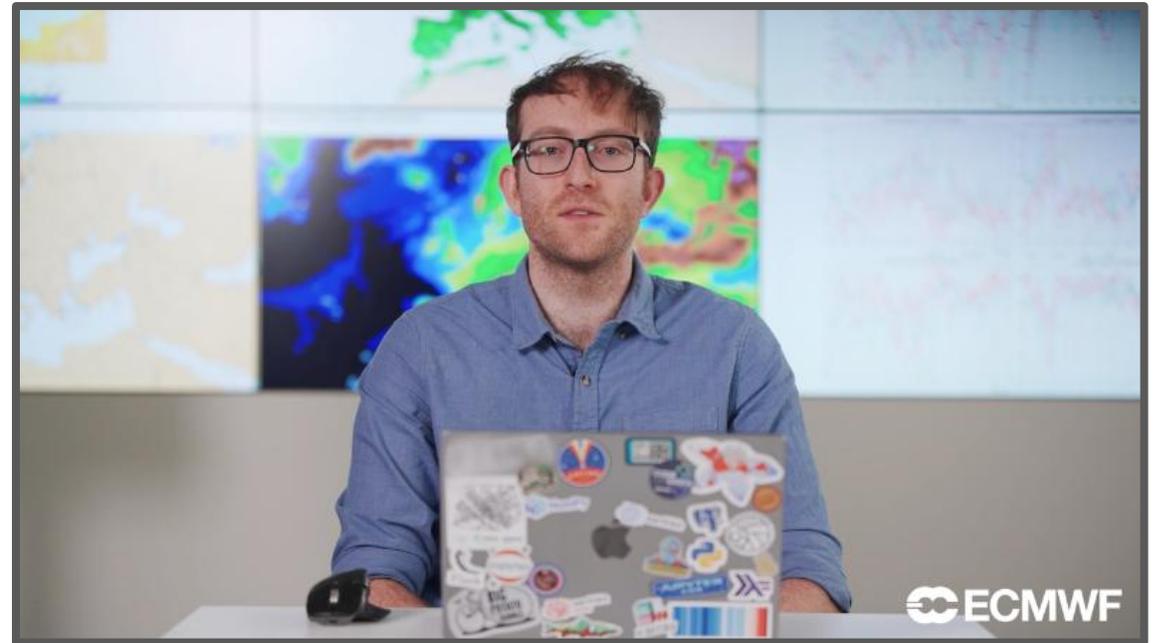

# Earthkit and its components

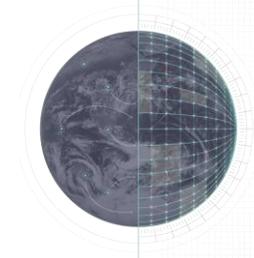

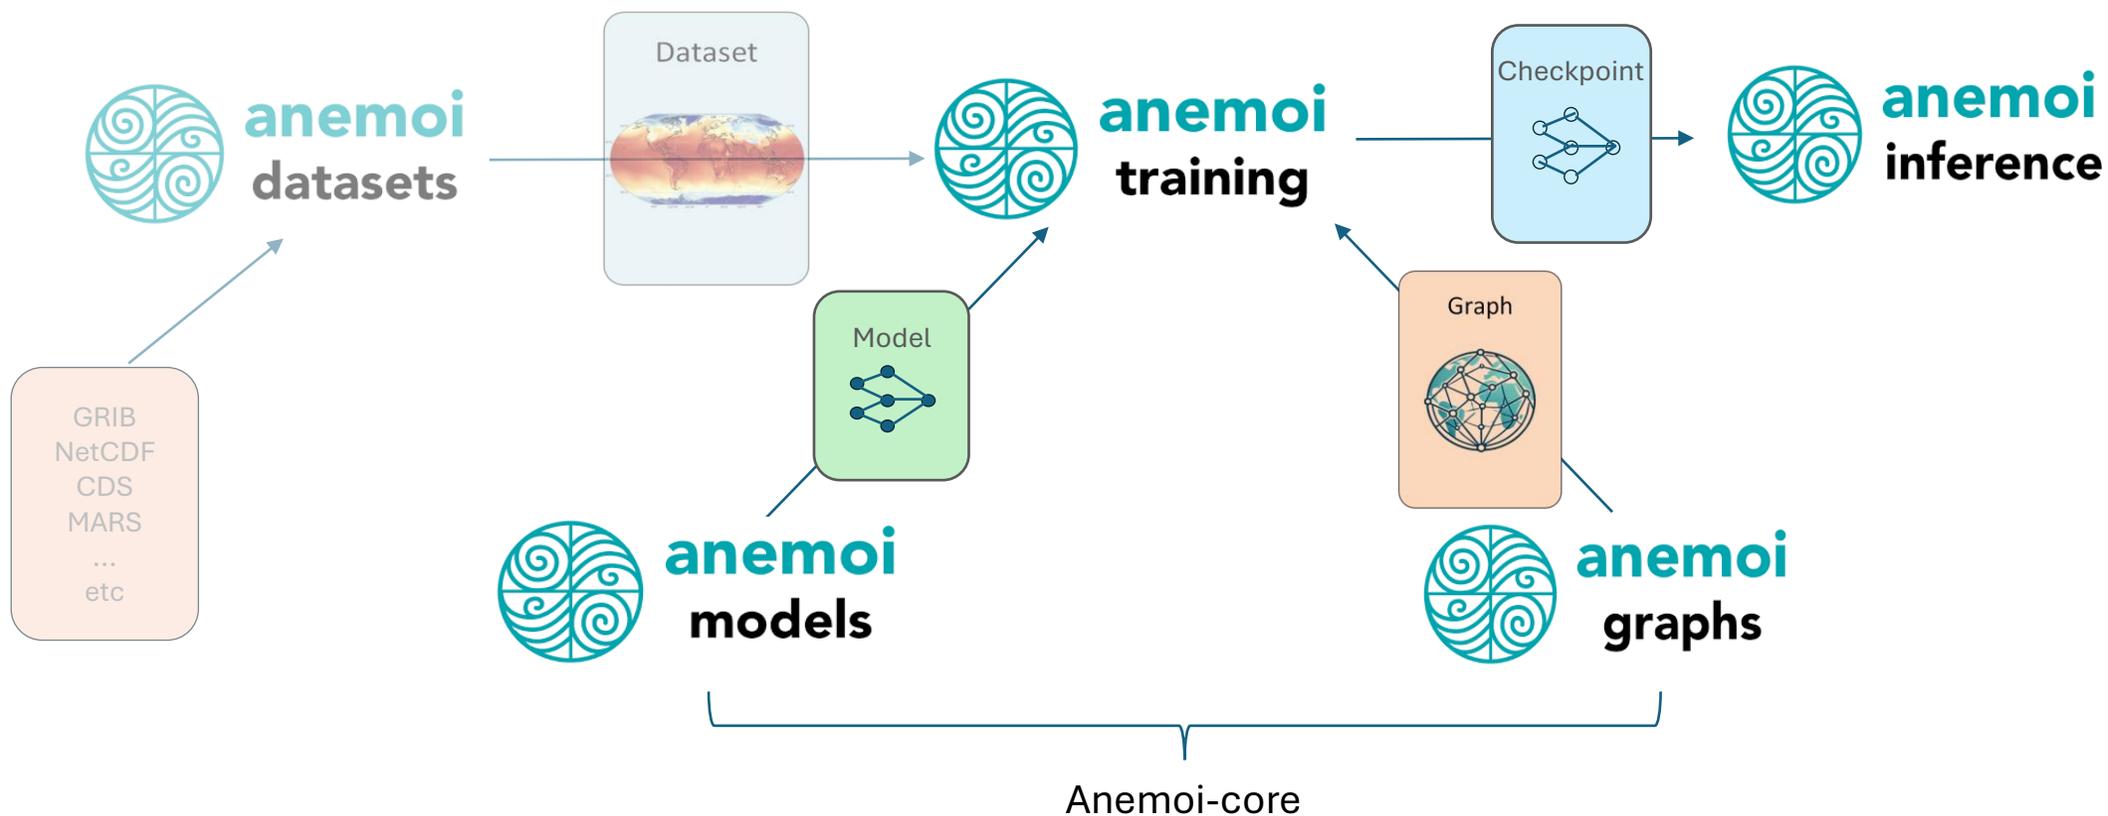

The screenshot shows the earthkit website homepage. At the top left is the earthkit logo. To its right are navigation links for 'Install', 'About', and 'Docs', followed by a GitHub icon. The main heading reads 'Open-source tools for seamless earth science workflows'. Below this, a paragraph states: 'earthkit streamlines earth science workflows while retaining interoperability with essential data science packages like Numpy, Pandas and xarray'. A prominent blue button says 'Install earthkit'. Underneath the button, it says 'Install earthkit 0.9.4, containing the full suite of earthkit tools'. On the right side of the page is a large image of a globe with a color-coded temperature or weather map overlay. At the bottom of the page, the text 'The earthkit ecosystem' is displayed.

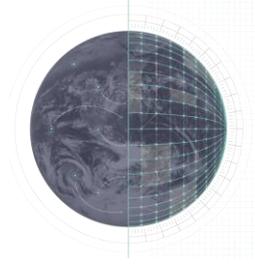

Introductory videos

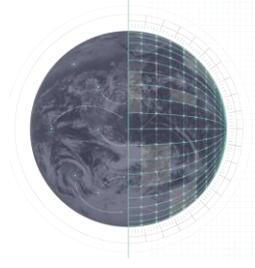

# Anemoi in a Nutshell

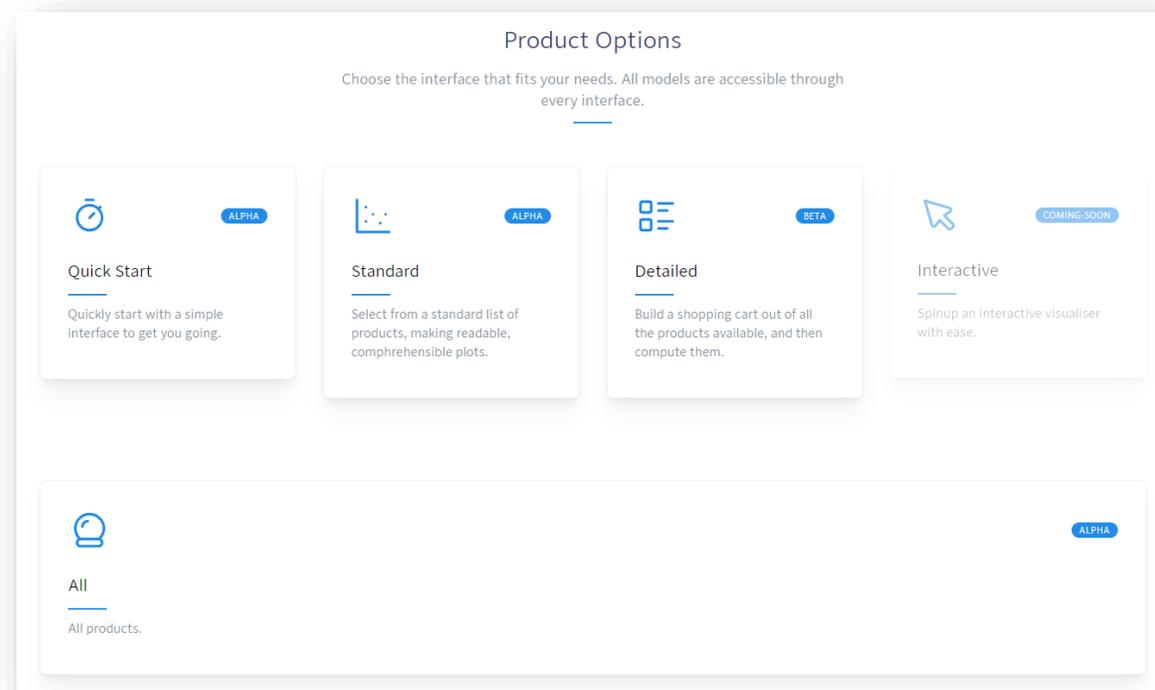

# Showcase

# Forecast-In-A-Box – “What’s in the box?”

- **UI + Catalogue**

- Provides control to the user, whilst keeping it accessible

# Forecast-In-A-Box – “What’s in the box?”

- **Task Definitions**

- Constructed from Anemoi and Earthkit functions

*Fetch Initial Conditions*

Regrid and Interpolate

*Execute ML model*

**anemoi**

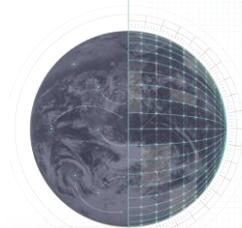

**earthkit**

*Generate Products*

Transform Outputs

*Visualise*

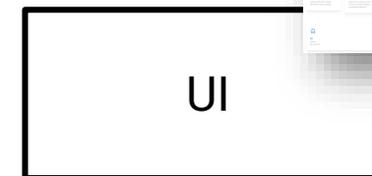

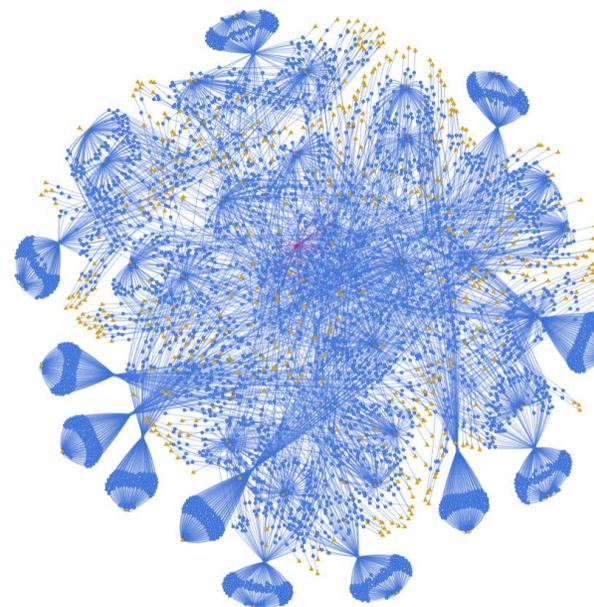

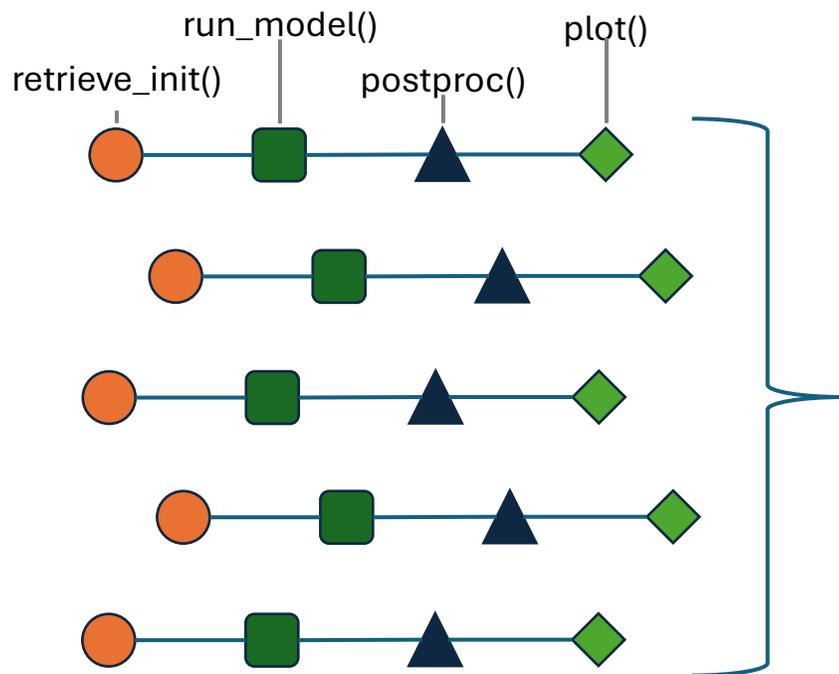

# Forecast-In-A-Box – “What’s in the box?”

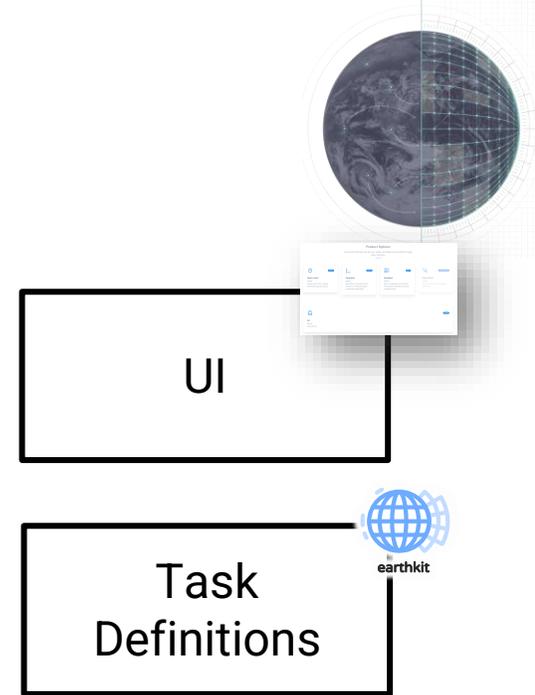

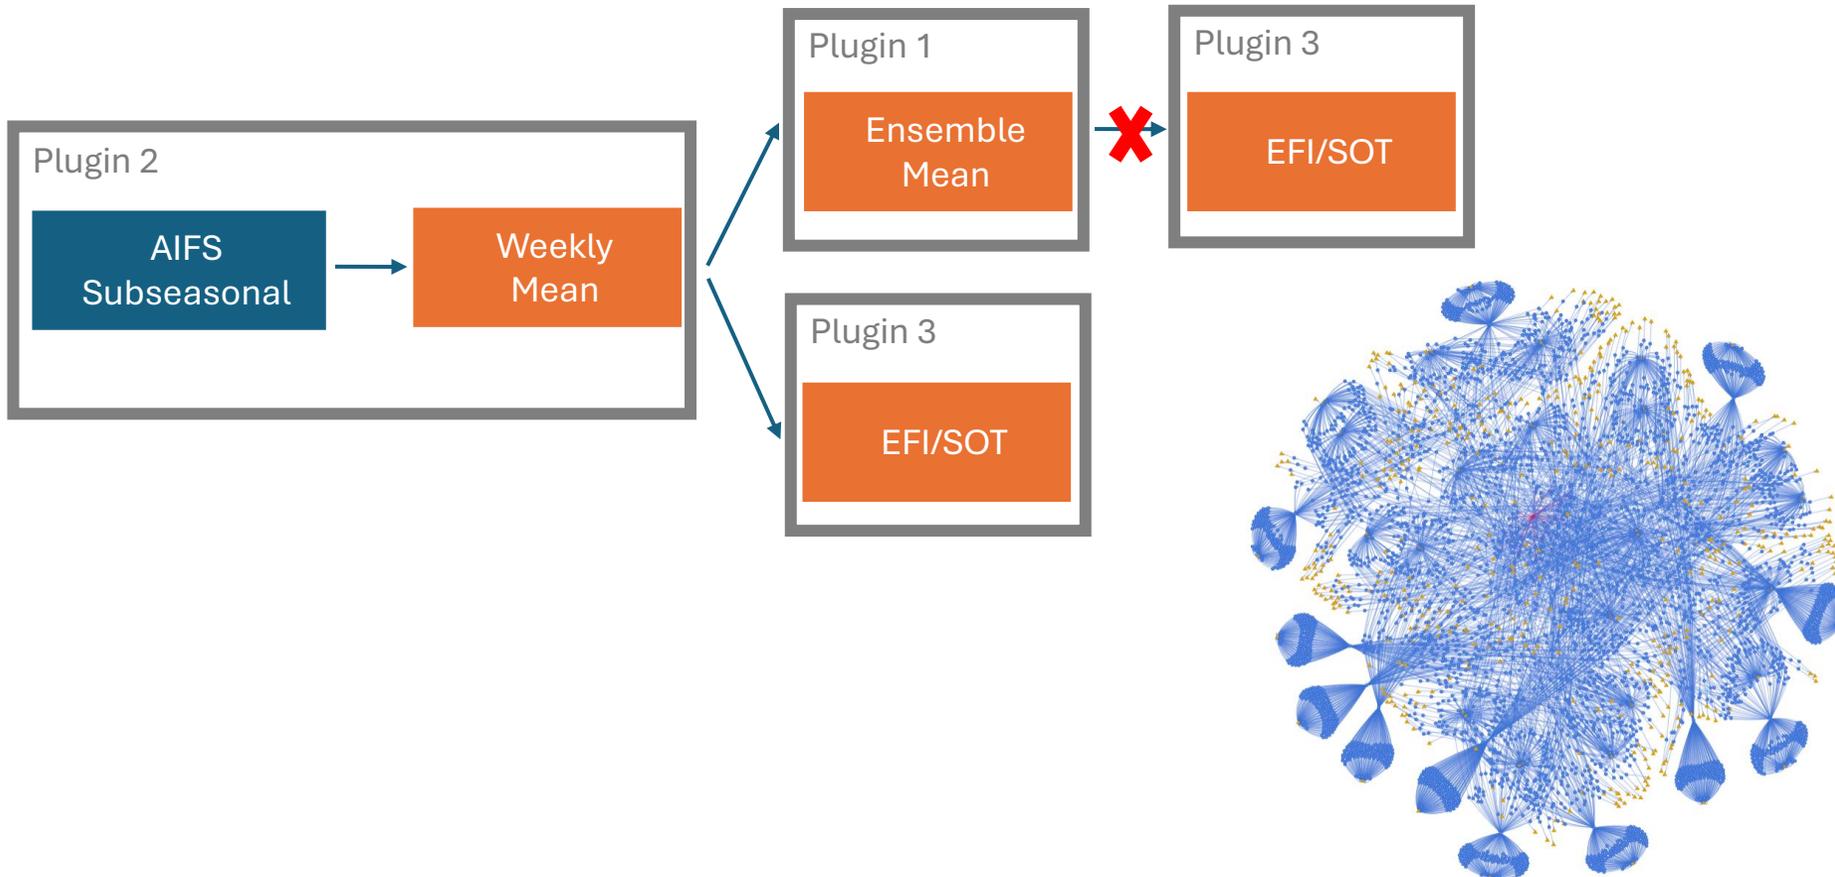

- **Orchestration**

- Creation of a series of graphs from products specifications
- Construction of meta computing graph and scheduling

# Forecast-In-A-Box – “What’s in the box?”

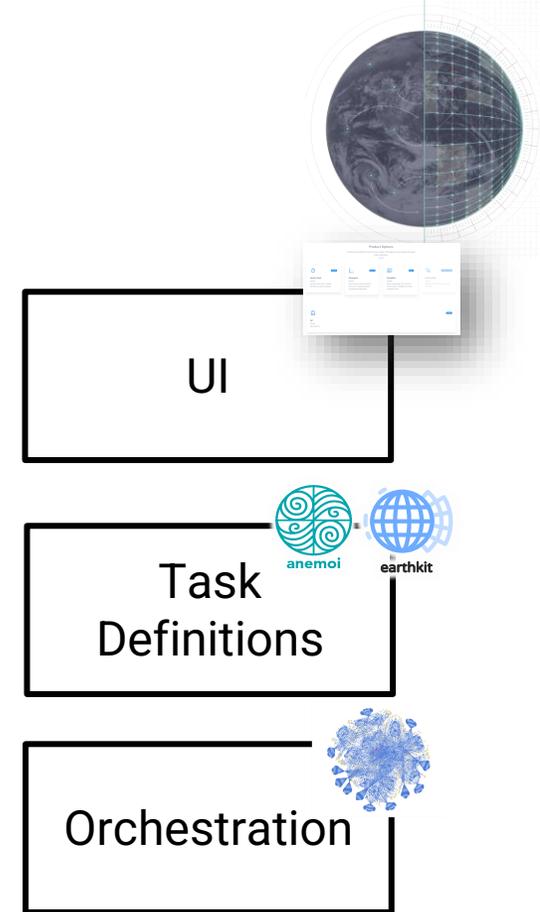

- Combining Products

# Forecast-In-A-Box – “What’s in the box?”

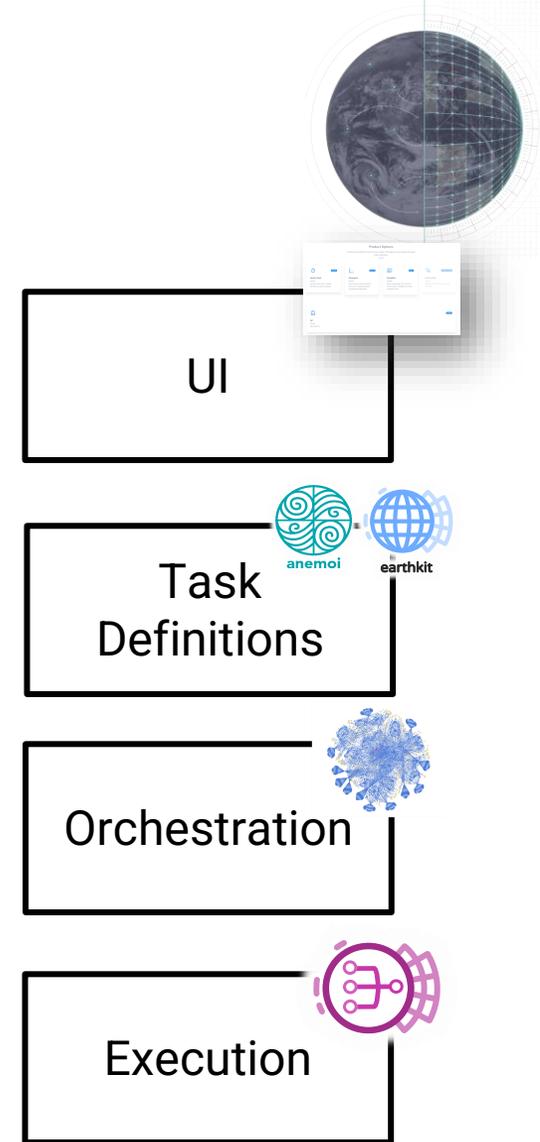

- **Execution Layer**

- Executes the task graph
- Data caching and persistence layer
- Optimizing for data colocation and transfer
- All in memory

# Forecast-In-A-Box – “What’s in the box?”

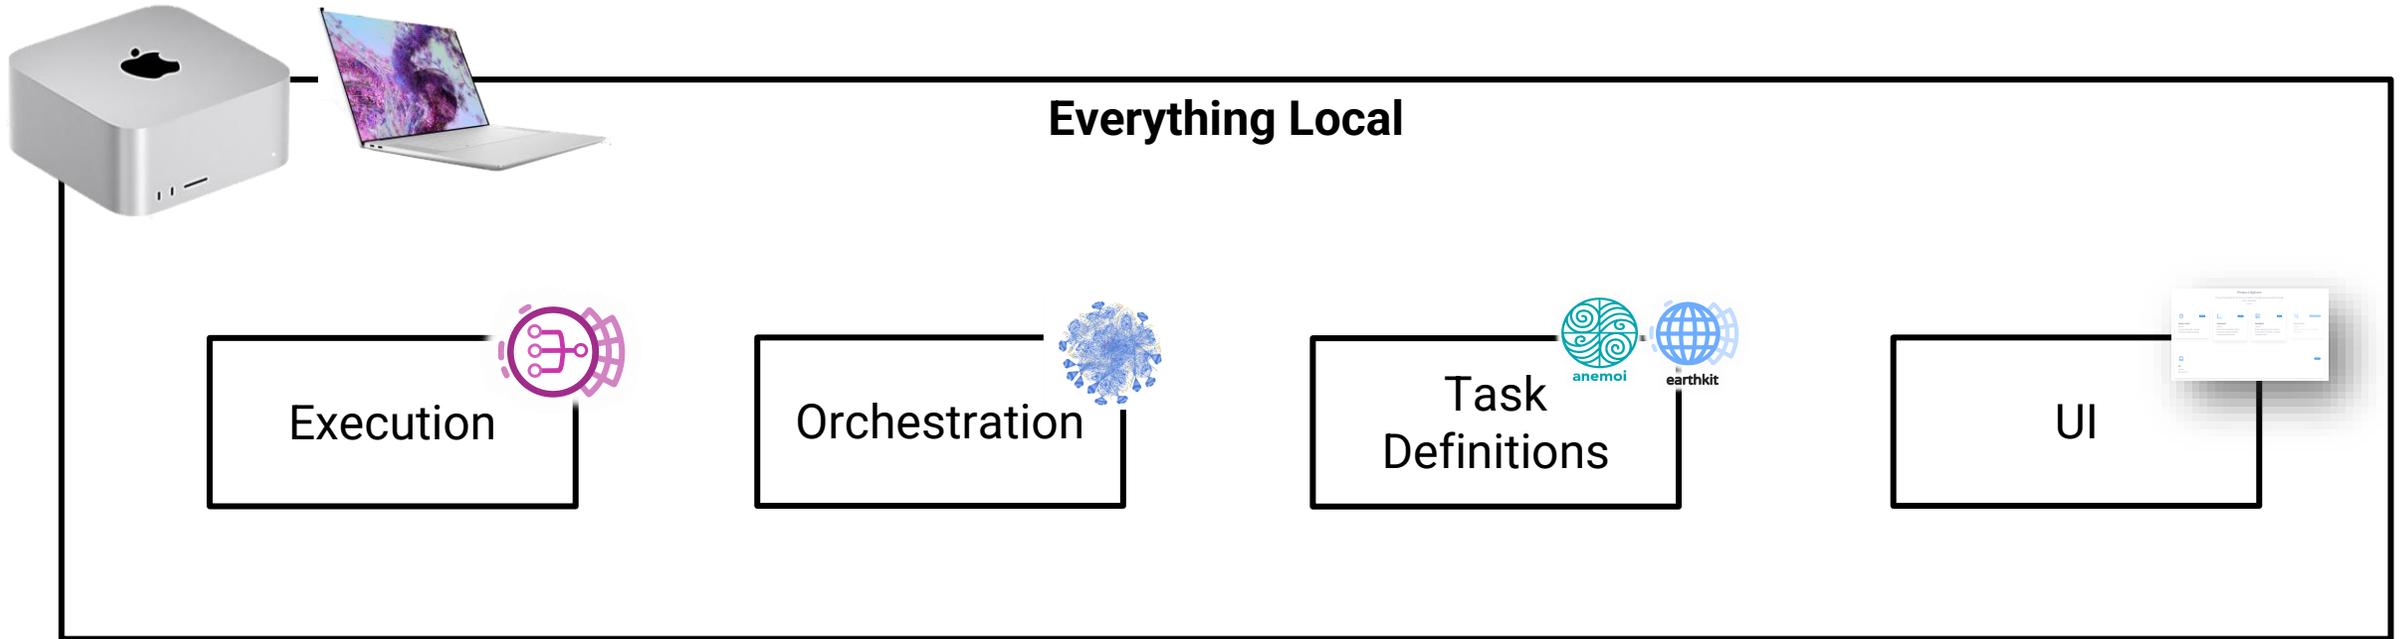

- **Putting it all together**
  - A complete forecasting system
  - Capable of running any Anemoi inference model
  - Runs ECMWF’s full operational product and post processing software
  - Provides ECMWF production quality graph and plotting software

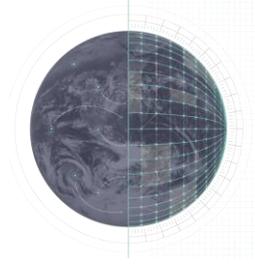

# Forecast-In-A-Box – “What’s in the box?”

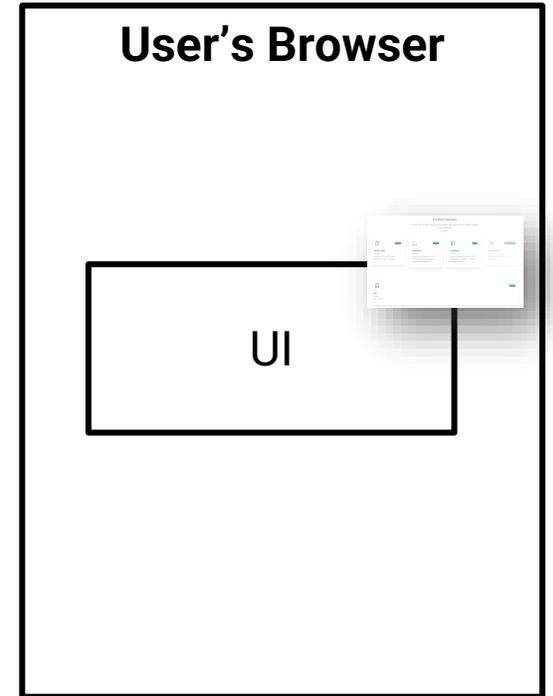

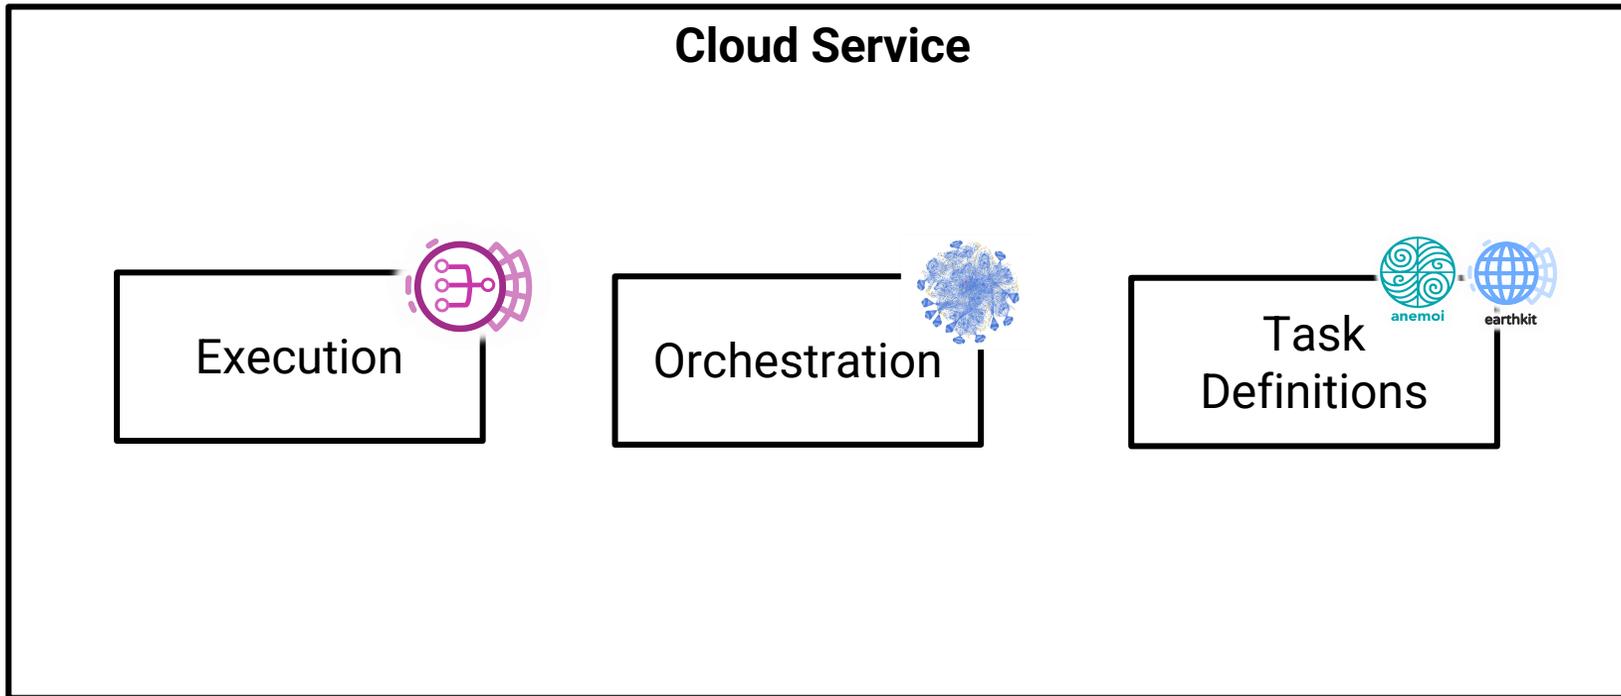

- Can be deployed in many ways...

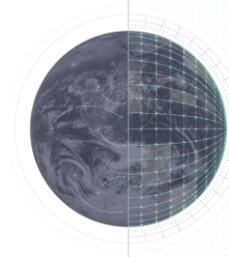

# Forecast-In-A-Box – “What’s in the box?”

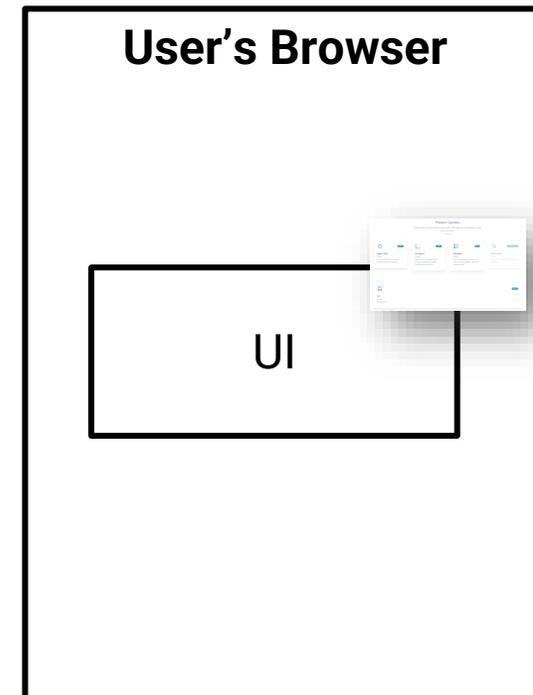

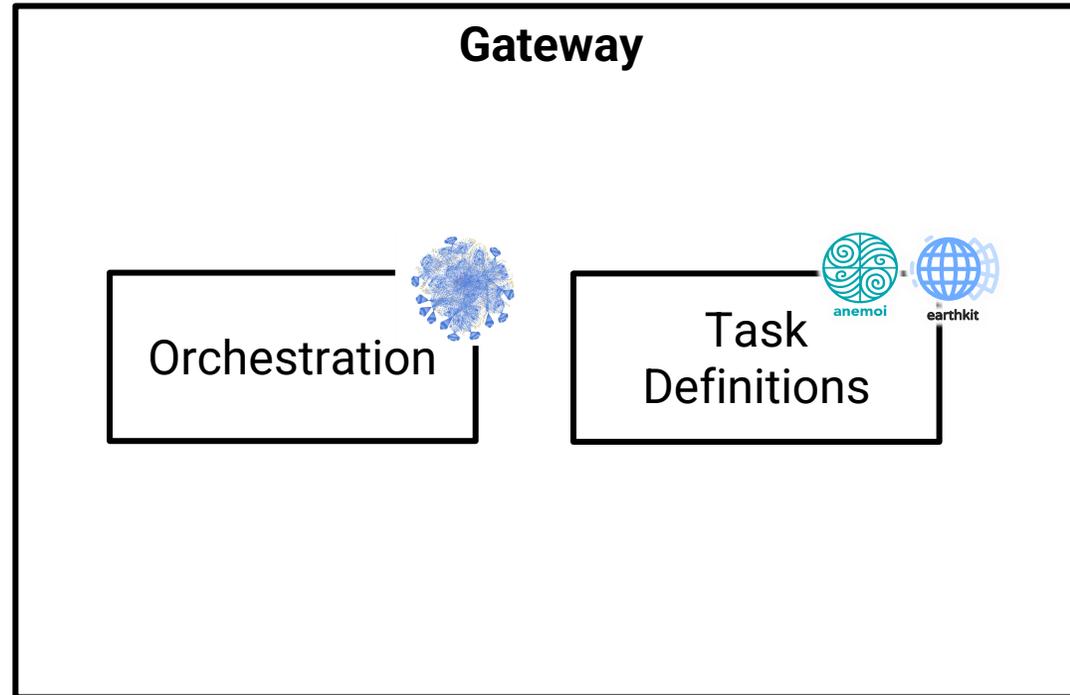

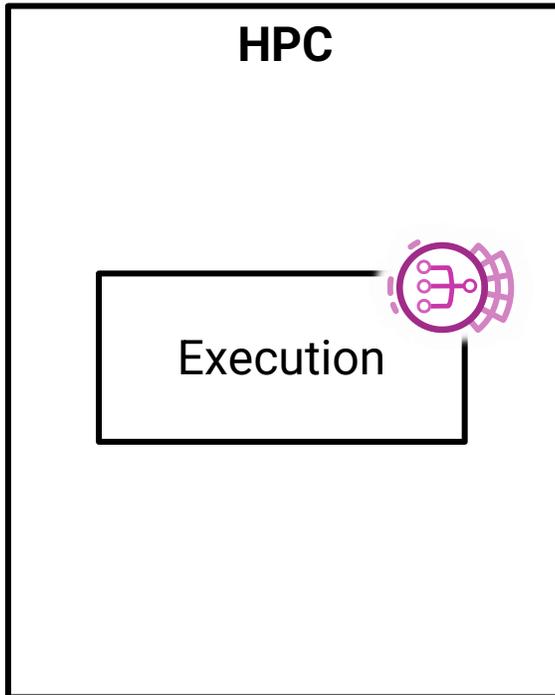

- Can be deployed in many ways...

# Forecast-In-A-Box – “What’s in the box?”

- Can be deployed in many ways...

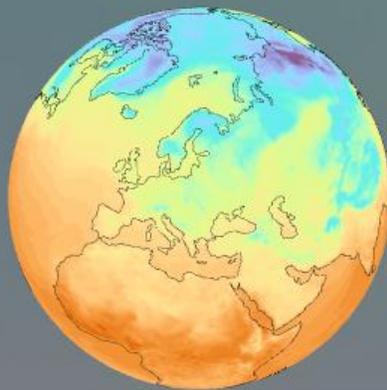

# Product generation on the fly, for any Anemoi model

Forecast-in-a-Box reimagines how forecasts are produced and delivered.

Rather than relying on remote, data-intensive numerical weather prediction pipelines, Forecast-in-a-Box distributes a self-contained forecasting environment that users can install and run anywhere.

# 2026 Timeline

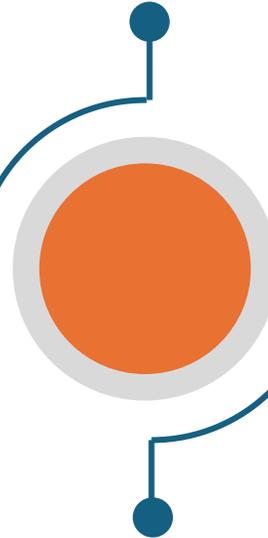

Q1 2026

## Prototype V2

- Prototype features reproduced
- New UI
- Plugin system

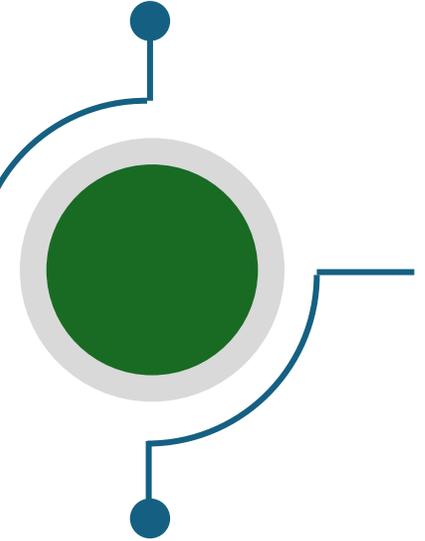

Q2 2026

## Advanced visualisation

- Improved outputs system
- WMS server integrated
- Experiment tracking

Q3/Q4 2026

## Refinement and Expansion

- Iterate on design
- Add new products
- Extend to other projects such as SEWA/ArcX
