Audience discussion 2:

1. Huge volumes of satellite observations are not exploited in operational systems…why ?
2. Are the collaborative mechanisms in place for ensuring data do get used sufficient ?
3. Are our current assimilation systems fit for purpose to exploit new data in a timely manner ?
4. Do data providers get sufficient guidance on what observations are needed…is it acted upon ?
5. How can we extract more value from historical missions to improve today's forecast ?
6. Are there some crucial observations we are missing and urgently need for coupled NWP ?
7. If we had 1 Billion EUR to spend on improving weather warnings…how would we spend it ?
8. Will observation requirements change with AI systems ?
